

State Water Resources Control Board

WATER QUALITY ORDER WQ 2025-0048-DWQ CLEAN WATER ACT SECTION 401 WATER QUALITY CERTIFICATION

Effective Date: Upon Deputy Director's Signature

Project: OC Loop Segments O, P, and Q Coyote Creek Bikeway Project

Project Type: Roads and Highways

Program Type: Fill/Excavation

Identifiers:

WDID No: SB20032IN

USACE No: SPL-2020-00387

Federal Lic: Nationwide Permit 14

Reg. Meas. ID: 441496

Applicant: County of Orange

Applicant Contact: Eric Rademacher
Environmental Resource Specialist
County of Orange
601 N Ross Street
Santa Ana, CA 92701
Phone: (714) 647-3918
Email: eric.rademacher@ocpw.ocgov.com

Water Board Staff: Devin Jokerst
Environmental Scientist
1001 I Street 15th Floor
Sacramento CA 95814
Phone: (916) 323-0883
Email: devin.jokerst@waterboards.ca.gov

Water Board Contact Person: If you have any questions, please contact State Water Resources Control Board (Water Board) Staff listed above, call (916) 341-5900, or email SB-401Application@waterboards.ca.gov.

Attachment B: Receiving Waters and Impact Information

Attachment C: Report and Notification Requirements

Attachment D: CEQA Findings of Fact

Attachment E: Signatory Requirements

Attachment F: Deviation Procedures

I. Summary

This grant of Clean Water Act (CWA) section 401 certification with conditions (Certification or Order) is issued at the request of the County of Orange (hereinafter Permittee) for the OC Loop Segments O, P, and Q Coyote Creek Bikeway Project (Project). The initial application was received on March 6, 2025. A complete application was submitted on June 2, 2025, as verified by Water Board staff.

II. Findings

- A. This Order is adopted pursuant to CWA section 401 and the California Porter-Cologne Water Quality Control Act (Wat. Code § 13000, *et seq.*). This Certification also serves as waste discharge requirements in accordance with State Water Board Water Quality General Order No. 2003-0017-DWQ. Discharges to waters of the state are prohibited except when in accordance with Water Code section 13264.
- B. In the event of any violation or threatened violation of the conditions of this Order, the violation or threatened violation shall be subject to any remedies, penalties, process, or sanctions as provided for under state and federal law, including the CWA and the Porter-Cologne Water Quality Control Act.
- C. In response to a suspected violation of any condition of this Order, the Water Board may require the holder of this Order to furnish, under penalty of perjury, any technical or monitoring reports the Water Boards deem appropriate, provided that the burden, including costs, of the reports shall bear a reasonable relationship to the need for the reports and the benefits to be obtained from the reports.
- D. This Order and all conditions contained herein continue to have full force and effect regardless of the expiration or revocation of any federal license or permit issued for the Project.
- E. This Order does not provide coverage under the National Pollutant Discharge Elimination System (NPDES) General Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities (Order WQ 2022-0057-DWQ; NPDES No. CAS000002).
- F. This Order does not authorize any act which results in the take of a threatened, endangered or candidate species, which is now prohibited, or becomes prohibited in the future, under either the California Endangered Species Act (Fish & G. Code, §§ 2050-2097) or the federal Endangered Species Act (16 U.S.C. sections 1531-1544). If a “take” will result from any act authorized under this Order held by the Permittee, the Permittee must obtain authorization for the take prior to any construction or operation of the portion of the Project that may result in a take. The Permittee is responsible for meeting all requirements of the applicable endangered species act for the Project authorized under this Order.

III. Project Purpose and Description

Project Purpose: The purpose of the Project is to close an existing bikeway gap in the current OC Loop, resulting in enhanced safety and mobility within the County of Orange.

Project Description: The Permittee proposes to add Class I bikeways along the concrete-lined Coyote Creek; construct two bike bridges and an overcrossing that span the creek but will be supported by footings outside of the channel; construct a road undercrossing with connections at concrete portions of the outer creek banks; install side drains into outer portions of the creek banks; and seal two existing side drains.

A portion of Coyote Creek, between the eastern bikeway overpass and the nearby maintenance ramp, will be diverted during construction.

Project Location

County: Orange

Nearest City: Cerritos

Start: Latitude: 33.8693° and Longitude: -118.0329°

End: Latitude: 33.8825° and Longitude: -118.0009°

Maps showing the Project location are found in Attachment A of this Order.

IV. Project Impact and Receiving Waters Information

The Project is located within the jurisdiction of the Santa Ana Regional Water Quality Control Board and Los Angeles Regional Water Quality Control Board (collectively Regional Water Boards). Receiving waters and groundwater potentially impacted by this Project are protected in accordance with the applicable water quality control plans (Basin Plan). The plan for each region and other plans and policies may be accessed at the [State Water Resources Control Board's Plans and Policies Web page](http://www.waterboards.ca.gov/plans_policies/) (http://www.waterboards.ca.gov/plans_policies/). The Basin Plans include water quality standards, which consist of existing and potential beneficial uses of waters of the state, water quality objectives to protect those uses, and the state and federal antidegradation policies.

It is the policy of the State of California that every human being has the right to safe, clean, affordable, and accessible water adequate for human consumption, cooking, and sanitary purposes. This Order promotes that policy by requiring discharges to meet maximum contaminant levels designed to protect human health and ensure that water is safe for domestic use.

Project impact and receiving waters information is in Attachment B. Table 1 of Attachment B lists the receiving waters and beneficial uses of waters of the state impacted by the Project. Table 2 of Attachment B includes individual impact locations and quantities.

V. Description of Direct Impacts to Waters of the State

The Project will result in direct temporary impacts to waters of the state. Temporary impacts include general ground disturbance from installation of project features along existing concrete walls, heavy equipment use and staging, and site access.

Total Project fill/excavation quantities for all impacts are summarized in Table 1. No physical loss in area or degradation of ecological condition is anticipated with the Project, so no permanent impacts are reported.

Table 1: Total Project Fill/Excavation Quantity for Temporary Impacts¹

Aquatic Resources Type	Acres	Linear Feet
Stream Channel	2.637	9,618

VI. Description of Indirect Impacts to Waters of the State

The Water Board recognizes the potential for indirect impacts to waters of the state associated with the Project, including siltation of receiving waters, introduction of pollutants (e.g., metals, trash, petroleum products, concrete waste (wet and dry), sanitary waste, and chemicals) to receiving waters during construction, and an increase of impervious surfaces resulting in a reduction in water quality for receiving waters.

The conditions set forth in section VIII will avoid and minimize the indirect impacts to waters of the state.

VII. Avoidance and Minimization

Avoidance and minimization measures were identified in the Project's Initial Study/Mitigated Negative Declaration (IS/MND). The following mitigation measures will be implemented to avoid and/or minimize direct and indirect impacts to waters of the state:

- MM BIO-1 Qualified Biologist/Biological Monitor
- MM BIO-2 Worker Environmental Awareness Program
- MM BIO-3 Project Limits and Designated Areas
- MM BIO-4 General Vegetation Avoidance and Protection Measures
- MM HAZ-1 Soil Management Plan
- MM HAZ-2 Aerially Deposited Lead Plan, and

¹ Includes only temporary direct impacts to waters of the state and does not include area of temporary disturbance which could result in a discharge to waters of the state. Temporary impacts, by definition, are restored to pre-project conditions and therefore do not include a physical loss of area or degradation of ecological condition.

- MM HAZ-3 Soil Monitoring for Volatile Organic Compounds

No alternatives analysis is required because the Project has no permanent impacts to aquatic resources and no impacts to rare, threatened or endangered species habitat in waters of the state, wetlands, eel grass beds, Outstanding National Resources Waters or Areas of Special Biological Significance (State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State, section IV.A.1.g.v).

VIII. Conditions

The Water Board has independently reviewed the record of the Project to analyze impacts to water quality and designated beneficial uses within the watersheds of the Project. This Order provides reasonable assurance that the Project authorized under this Order will comply with state and federally approved water quality requirements, provided that the following conditions are adhered to:

A. Impacts to Waters of the State

Impacts to waters of the state shall not exceed quantities shown in Table 1.

B. Reporting and Notification Requirements

The following section details the reporting and notification types and timing of submittals. Requirements for the content of these reporting and notification types are detailed in Attachment C, including specifications for photo and map documentation during the Project. Written reports and notifications must be submitted using the Reporting and Notification Cover Sheet located in Attachment C, which must be signed by the Permittee or an authorized representative.

1. Project Reporting

- Monthly Reporting:** The Permittee must submit a Monthly Report to the Water Board on or before the 1st of each month during construction. Monthly reporting shall continue until the Water Board issues a Notice of Completion of Discharge Letter to the Permittee.
- Annual Reporting:** The Permittee shall submit an Annual Report each year on the anniversary of the Effective Date of this Order. Annual reporting shall continue until the Water Board issues a Notice of Project Complete Letter to the Permittee.

2. Project Status Notifications

- Commencement of Construction:** The Permittee shall submit a Commencement of Construction Report at least 7 days prior to start of initial ground disturbance activities.
- Request for Notice of Project Complete Letter:** The Permittee shall submit a Request for Notice of Project Complete Letter when construction and any post-construction monitoring is complete, and no further Project activities will occur. This request shall be submitted to Water Board staff within 30 days following completion of all Project activities. Upon approval

of the request, Water Board staff shall issue a Notice of Project Complete Letter to the Permittee which will end the post discharge monitoring period and associated annual fees. Completion of post-construction monitoring shall be determined by Water Board staff and shall be contingent on successful attainment of restoration objectives.

3. **Conditional Notifications and Reports:**

The following notifications and reports are required as appropriate.

a. **Accidental Discharges of Hazardous Materials²:**

Following an accidental discharge of a reportable quantity of a hazardous material, sewage, or an unknown material, the following applies (Wat. Code, § 13271):

- i. As soon as (A) Permittee has knowledge of the discharge or noncompliance, (B) notification is possible, and (C) notification can be provided without substantially impeding cleanup or other emergency measures then:
 - a. First call – 911 (to notify local response agency)
 - b. Then call – Office of Emergency Services (OES) State Warning Center at: (800) 852-7550 or (916) 845-8911
 - c. Lastly, follow the required OES procedures as set forth in the [Office of Emergency Services' Accidental Discharge Notification Web Page](https://www.caloes.ca.gov/office-of-the-director/operations/response-operations/fire-rescue/hazardous-materials/spill-release-reporting/) (<https://www.caloes.ca.gov/office-of-the-director/operations/response-operations/fire-rescue/hazardous-materials/spill-release-reporting/>)
- ii. Following notification to OES, the Permittee shall notify the Water Board as soon as practicable (ideally within 24 hours). Notification may be delivered via written notice, email, or other verifiable means.
- iii. Within 5 business days of notification to the Water Board, the Permittee must submit an Accidental Discharge of Hazardous Material Report.

² "Hazardous material" means any material that, because of its quantity, concentration, or physical or chemical characteristics, poses a significant present or potential hazard to human health and safety or to the environment if released into the workplace or the environment. "Hazardous materials" include, but are not limited to, hazardous substances, hazardous waste, and any material that a handler or the administering agency has a reasonable basis for believing that it would be injurious to the health and safety of persons or harmful to the environment if released into the workplace or the environment. (Health & Saf. Code, § 25501.)

b. Violation of Water Quality Standards

- i. The Permittee shall notify the Water Board of any event causing a violation of water quality standards. Notification may be delivered via written notice, email, or other verifiable means.
- ii. This notification must be followed within 3 business days by submission of a Violation of Water Quality Standards Report.

c. In-Water Work and Diversions

- i. The Permittee shall notify the Water Board at least 48 hours prior to initiating work in water or stream diversions. Notification may be delivered via written notice, email, or other verifiable means.
- ii. Within 3 business days following completion of work in water or stream diversions, an In-Water Work/Diversions Water Quality Monitoring Report must be submitted to Water Board staff.

d. Modifications to Project

Project modifications may require an amendment of this Order. The Permittee shall give advance notice to Water Board staff if Project implementation as described in the application materials is altered in any way or by the imposition of subsequent permit conditions by any local, state, or federal regulatory authority by submitting a Modifications to Project Report. The Permittee shall inform Water Board staff of any Project modifications that will interfere with the Permittee's compliance with this Order. Notification may be made in accordance with conditions in the Deviation section of this Order.

e. Transfer of Property Ownership

This Order is not transferable in its entirety or in part to any person or organization except after notice to the Water Board in accordance with the following terms:

- i. The Permittee must notify the Water Board of any change in ownership or interest in ownership of the Project area by submitting a Transfer of Property Ownership Report. The Permittee and purchaser must sign and date the notification and provide such notification to the Water Board at least 10 days prior to the transfer of ownership. The purchaser must also submit a written request to the Water Board to be named as the permittee in a revised permit.
- ii. Until such time as this Order has been modified to name the purchaser as the permittee, the Permittee shall continue to be responsible for all requirements set forth in this Order.

f. Transfer of Long-Term Best Management Practices (BMP) Maintenance

If maintenance responsibility for post-construction BMPs is legally transferred, the Permittee must submit to the Water Board a copy of such

documentation and must provide the transferee with a copy of a long-term BMP maintenance plan that complies with manufacturer or design specifications. The Permittee must provide such notification to the Water Board with a Transfer of Long-Term BMP Maintenance Report at least 10 days prior to the transfer of BMP maintenance responsibility.

C. Water Quality Monitoring

1. General

If surface water is present, continuous visual monitoring shall be conducted during active construction to detect accidental discharge of construction related pollutants (e.g., oil and grease, turbidity plume, uncured concrete).

2. In-Water Work or Diversions

A Project-specific draft Dewatering and Water Quality Monitoring Plan was provided with the application. A final dewatering and water quality monitoring plan shall be submitted to Water Board staff for approval at least 30 days in advance of any discharge to the affected water body. Water quality monitoring shall be conducted in accordance with the approved plan.

3. Accidental Discharges/Noncompliance

Upon occurrence of an accidental discharge, the Permittee shall determine whether the discharge includes hazardous materials or will cause or contribute to an exceedance of water quality objectives, and if so, notify the Water Board in accordance with the Conditional Notifications and Reports section VIII.B.3. Water Board staff may require additional water quality monitoring based on the discharge constituents and/or related water quality objectives and beneficial uses.

4. Post-Construction

The Permittee shall visually inspect the Project site following the completion of all Project activity. A minimum of one site visit is required between October 30 and April 15. The inspection shall occur within 24 hours after a rain event that results in 0.5 inch or more of rainfall in 48 hours to ensure excessive erosion, stream instability, or water quality pollution is not occurring in or downstream of the Project site. The Permittee shall report the results of this monitoring visit to Water Board staff. The report shall include photos of previous work areas taken directly following the rain event.

If erosion control measures have failed or water quality pollution is occurring, contact the Water Board staff member overseeing the Project within 3 business days. The Water Board may require the submission of a Violation of Water Quality Standards Report. Additional permits and/or subsequent monitoring may be required to carry out any necessary site remediation.

D. Standard Conditions

1. This action is subject to modification or revocation upon administrative or judicial review, including review and amendment pursuant to Water Code

- section 13330, and California Code of Regulations, title 23, chapter 28, article 6 commencing with section 3867.
2. This Order is not intended and shall not be construed to apply to any activity involving a hydroelectric facility and requiring a Federal Energy Regulatory Commission (FERC) license or an amendment to a FERC license, unless the pertinent certification application was filed pursuant to subsection 3855(b) of chapter 28, title 23 of the California Code of Regulations, and that application specifically identified that a FERC license or amendment to a FERC license for a hydroelectric facility was being sought.

E. Fees

1. This Order conditioned upon total payment of any fee required under title 23 of the California Code of Regulations.

The total fee amount required by the California Code of Regulations, title 23, sections 3833(b)(3) and 2200(a)(3), Category A – Fill & Excavation, is \$99,116.16 (application and discharge), which was received on April 30, 2025.

2. **Annual Fees:** This Order is subject to annual billing based on the fee schedule in effect at the time of billing. Annual billing will continue until the Project, including monitoring, is complete and the Water Board receives an acceptable request for a Notice of Project Complete Letter (see Attachment C). Invoices are usually sent out at the end of each calendar year.³

To stop annual billing, the Permittee must request a Notice of Project Complete Letter from the Water Board. Water Board staff will verify if the conditions of the Order are met and may conduct a site visit to confirm compliance.

For more information on fees, visit the State Water Board's [Water Quality Fees website](https://www.waterboards.ca.gov/resources/fees/water_quality/),⁴ under Water Quality Certification (WQC) Program Fees.

F. General Compliance

1. Permitted actions must not cause a violation of any applicable water quality standards, including impairment of designated beneficial uses for receiving waters as adopted in the Basin Plans by any applicable Regional Water

³ Annual invoices for fill and excavation projects are issued for projects active for any amount of time in the current fiscal year (July 1 – June 30). Annual invoices for dredging projects are based on the quantity of dredged material in the previous fiscal year.

⁴ https://www.waterboards.ca.gov/resources/fees/water_quality/

Board. The source of any such discharge must be eliminated as soon as practicable.

2. The Project must conform to the engineering plans, specifications, and technical reports submitted with the application materials. Water Code section 13264 prohibits any discharge that is not specifically authorized in this Order.
3. The Permittee shall adhere to all requirements in the adopted IS/MND for the Project, including the Mitigation Monitoring and Reporting Program (November 13, 2020) which is incorporated herein by reference and included in Attachment D, California Environmental Quality Act (CEQA) Findings of Fact.

G. Administrative

1. Signatory requirements for all document submittals required by this Order are presented in Attachment E.
2. **Site Access:** The Permittee shall grant Water Board staff, including State Water Board, Los Angeles Regional Water Board, and Santa Ana Regional Water Board staff or an authorized representative (including an authorized contractor acting as a Water Board representative), upon presentation of credentials and other documents as may be required by law, permission to:
 - a. Enter upon the Project or compensatory mitigation site(s) premises where a regulated facility or activity is located or conducted, or where records are kept.
 - b. Have access to and copy any records that are kept and are relevant to the Project or the requirements of this Order.
 - c. Inspect any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under this Order.
 - d. Sample or monitor for the purposes of assuring Order compliance.
3. The Permittee is responsible for work conducted by its consultants, contractors, and any subcontractors. A copy of this Order shall be provided to any consultants, contractors, and subcontractors working on this Project. Copies shall remain at the Project site for the duration of this Order. All personnel performing work on the Project shall be familiar with the content of this Order and its posted location at the Project site.

H. Construction Conditions

1. All materials and supplies necessary for implementing these construction conditions must be on site and ready for use at the start of the construction activity and must remain in supply and ready for implementation throughout the construction process. All non-structural BMP materials (e.g., training documents, compliance tracking procedures) must be ready for use at the start of construction.

2. Construction material, debris, rubbish, spoils, soil, silt, sawdust, steel, welding slag, welding rods, waste material, waste containers, other organic or earthen material, or any other substances which could be detrimental to water quality or hazardous to aquatic life that is discharged as a result of Project related activities shall be prevented from entering waters of the state. Spoils from excavations shall not be stored in waters of the state.
3. Environmentally sensitive areas and environmentally restricted areas, including any avoided waters of the state, must be clearly identified in the field for exclusion prior to the start of construction. Such identification must be properly maintained until construction is completed and the soils are stabilized. Equipment, materials, or any other substances or activities that may impact waters of the state outside of the limits of Project disturbance are prohibited.
4. The number of access routes, number and size of staging areas, and the total area of the activity must be limited to the minimum necessary to achieve the Project goal. Routes and work area boundaries must be clearly demarcated.
5. Bridges, side drains, or other structures must be installed so that water and in-stream sediment flow are not impeded. Appropriate design criteria, practices and materials must be used in areas where access roads intersect waters of the state.
6. Temporary materials placed in any water of the state must be removed as soon as construction is completed at that location, and all temporary roads must be removed or re-contoured and restored according to the approved restoration plan and specifications provided in the application materials.
7. A method of containment must be used below any temporary bridge, trestle, and/or other stream crossing structure to prevent any debris or spills from falling into the waters of the state. Containment must be maintained and kept clean for the life of any temporary crossing structure.
8. Unless authorized for restoration, material excavated to prepare a site for placement of the permitted fill material must be properly disposed of in an upland area. The disposal site must be located at a sufficient distance away from flowing or standing water such that the excavated material does not erode or move in any way into any water of the state.
9. Any structure, including but not limited to, side drains, culverts, pipes, piers, and coffer dams, placed within a stream where fish (as defined in Fish and Game Code section 45) exist or may exist, must be designated, constructed, and maintained such that it does not constitute a barrier to upstream or downstream movement of aquatic life, or cause an avoidance reaction by fish due to impedance of their upstream or downstream movement. This includes, but is not limited to, maintaining the supply of water and maintaining flows at an appropriate depth, temperature, and velocity to facilitate upstream and downstream fish migration. If any structure results in a long-term reduction in fish movement, the Permittee shall be responsible for restoration of conditions

as necessary (as determined by the Water Board) to secure passage of fish across the structure.

10. **Dust Abatement:** Dust abatement chemicals added to water can be hazardous to wildlife and, if allowed to enter streams, detrimental to water quality. Therefore, dust abatement activities shall be conducted so that sediment or dust abatement chemicals are not discharged into waters of the state. Dust abatement products or additives that are known to be detrimental to water quality or wildlife shall not be used, unless specific management needs are documented, and product-specific application plans are approved by Water Board staff.
11. **Use of Mechanized Equipment:** Activities permitted under this Order shall be conducted in a manner that minimizes ground disturbance and other mechanical impacts. Equipment shall be operated and maintained in a manner that reduces the risk of spills or the accidental exposure of fuels or hazardous materials to water bodies or wetlands. Appropriate Project specific BMPs shall be specified by the Permittee and shall be approved by Water Board staff prior to Project discharges.
12. **Side Drain Construction or Maintenance**
 - a. Cured in Place Pipe is prohibited where it could cause detrimental physiological responses to human, plant, animal, or aquatic life, or cause discharges to waters of the state that do not comply with water quality objectives or goals.
 - b. Any replacement side drain or side drain that is to be left in place by a repair or maintenance Project must be placed at a gradient and orientation that will not result in erosional scour at the outlet.
 - c. Replacement of a side drain with a similarly sized side drain is allowable only where there is no visual indication that the existing drain is undersized (e.g., sediment aggradation upstream of the side drain).
 - d. Replacement side drains must be sized to convey a 100-year flow event with debris, without pressurizing flow passing through the side drain. The 100-year flow event should be modeled under climate change projections, if available.
13. **Toxic and Hazardous Materials**
 - a. Activities permitted under this Order shall not discharge toxic substances in concentrations that produce detrimental physiological responses to human, plant, animal, or aquatic life.
 - b. Discharge of unset cement, concrete, grout, damaged concrete spoils, or water that has contacted uncured concrete or cement, or related washout to surface waters, ground waters, or land is prohibited. If concrete washout is necessary at the site, washout containment shall be used to prevent any discharge. Wastewater may only be disposed by delivery to a sanitary wastewater collection system/facility (with authorization from the

facility's owner or operator) or a properly licensed disposal or reuse facility.

- c. Appropriate BMPs must be implemented throughout Project activities to prevent and control potential leaks/spills/drainage of potentially hazardous materials such as: non-petroleum hydraulic fluid; epoxies; paints and other protective coating materials; cement concrete or asphalt concrete; and washings and cuttings thereof.
- d. Activities permitted under this Order shall not discharge waste classified as "hazardous" as defined in California Code of Regulations title 22, section 66261 and Water Code section 13173. Appropriate BMPs for hazardous substances shall be specified by the Permittee and shall be approved by Water Board staff prior to Project discharges. These BMPs shall include, at a minimum:
 - i. All personnel handling fuels and other hazardous materials shall be properly trained.
 - ii. Adequate spill prevention and cleanup equipment and materials shall be present on site at all times during Project implementation.
 - iii. All mechanized equipment shall be maintained in good operating order and inspected on a regular basis.
 - iv. All on site fuel trucks or fuel containers shall be stored in an area where risk of contamination of water bodies by leaks or spills is minimized.
 - v. All equipment shall be fueled, maintained, and/or parked overnight in an upland area at least 100 feet from any delineated waters of the state.
 - vi. Hazardous materials, including chemicals, fuels, and lubricating oils, shall not be stored within 100 feet of any delineated waters of the state, and shall be stored in appropriate containers with appropriate secondary containment.
 - vii. Pumps or other stationary equipment operating within 100 feet of a waterbody or wetland shall utilize appropriate secondary containment systems to prevent spills.
 - viii. Any spills or leaks of hazardous materials, chemicals, fuels, lubricants, or any other potential pollutants shall be promptly and completely treated using appropriate materials and equipment.
 - ix. Spill containment supplies shall be on site in all work areas in sufficient quantities to allow immediate remediation of fuel, oil, hydraulic fluid or similar leaks and spills.
 - x. A staging area for equipment and vehicle fueling and storage shall be designated at least 100 feet away from waters of the state, in a location where fluids or accidental discharges cannot flow into waters of the state.

14. Invasive Species and Soil Borne Pathogens

- a. The Permittee is responsible for ensuring that all Project personnel follow proper weed control practices, and that appropriate weed prevention measures are included in Project plans.
- b. Any straw, hay or other unprocessed plant material used for any purpose must be certified or documented as being weed free.
- c. Soil borne pathogens are any nematodes, or any bacterial, protozoan, viral or fungal pathogens that can cause disease or death to native plants, agricultural crops, or ornamental plants (e.g., *Phytophthora ramorum*, the cause of sudden oak syndrome, and *Phytophthora lateralis*, the cause of Port Orford cedar root disease). Any equipment entering or leaving the Project area from an area of known soil borne pathogen infestation shall be thoroughly cleaned using methods appropriate for the known pathogen before entering or leaving the Project area. The fungus that causes Valley Fever, *Coccidioides spp.*, is not considered a soil borne pathogen in this certification.

15. Work in Delineated Waters of the State

- a. Work in waters of the state must not cause or contribute to an exceedance of water quality objectives in the receiving waters. Work in delineated waters commences at the onset of the regulated activity and continues until the activity is finished and all restoration of the affected work area is complete. The term “work” means any activities in any delineated waters of the state that are permitted under this Order, regardless of the presence or absence of flowing or standing water.
- b. Temporary diversions or impoundments of water, cofferdams, or similar structures installed for the purpose of temporary dewatering work areas shall be performed according to the final dewatering and water quality monitoring plan to be provided by the Permittee at least 30 days prior to dewatering for approval by Water Board staff (as required in Order section VIII.C.2). The plan shall include appropriate monitoring for water quality upstream and downstream of diversion structures.
- c. All surface waters, including ponded waters, shall be diverted away from areas undergoing grading, construction, excavation, and/or any other activity which may result in a discharge to waters of the state.
- d. Except for the following conditions, equipment must not be operated in standing or flowing waters without site specific approval from Water Board staff:
 - i. All construction activities must be effectively isolated from water flows to the greatest extent possible. This may be accomplished by working in the dry season or dewatering the work area in the wet season. When work in standing or flowing water is required, structures for isolating the in-water work area and/or diverting the water flow must not be contaminated by construction activities. Structures used to

isolate the in-water work area and/or diverting the water (e.g., coffer dam, geotextile silt curtain) must not be removed until all disturbed areas are stabilized.

- ii. Cofferdams and water barrier construction must be adequate to prevent seepage into or from the work area to the greatest extent feasible.
- iii. Flow diversions must be conducted in a manner that prevents pollution and/or siltation and in a manner that restores pre-Project flows (except for variation in flows due to seasonality, upstream diversions, etc.) upon completion of the activity. Diverted flows must be of sufficient quality and quantity, and of appropriate temperature, to support existing fish and other aquatic life both above and below the diversion. Diversions must be designed, installed, and maintained to reduce erosion. Pre-Project flows must be restored to the affected surface water body upon completion of work at that location.
- e. If groundwater dewatering is required for the Project, the Permittee shall consult with the Water Board to determine if additional permits are required. If additional Water Board permits relating to dewatering are required, the designated Water Board staff contact must be notified and copied on pertinent correspondence pertaining to those other required permits.
- f. All temporary dewatering methods shall be designed to have the minimum necessary impacts to waters of the state. All dewatering methods shall be installed such that natural flow is maintained upstream and downstream of the diversion area. Any temporary dams or diversions shall be installed such that the diversion does not cause sedimentation, siltation, or erosion upstream or downstream of the diversion area. All dewatering methods shall be removed immediately upon completion of activities for which diversions are needed.
- g. All temporary dewatering activities are subject to the work-in-water reporting and monitoring conditions presented in the Water Quality Monitoring section of this Order.

16. **Stormwater**

Project plans shall include the appropriate erosion and sediment control and stormwater management conditions described below.

a. **Erosion and Sediment Control**

- i. No later than 24 hours prior to the start of a likely rain event, the Permittee shall ensure that disturbed areas that drain to waters of the state are protected with correctly installed erosion control measures (e.g., jute, straw, coconut fiber erosion control fabric, coir logs, straw). A likely rain event is defined as any weather pattern that is forecast to have a 50 percent or greater probability of producing precipitation in the Project area. The Permittee shall obtain a printed copy of the

precipitation forecast information daily (and keep for record) from the National Weather Service Forecast Office.

- ii. Post-Project stormwater BMPs (e.g., subdrains) shall be installed as to not receive site runoff until effective erosion control measures are implemented to ensure that the stormwater features are protected from sediment accumulation.

b. Stormwater Management

- i. Disturbed areas must be temporarily stabilized to prevent erosion and accidental discharge into waters of the state no later than 24 hours prior to any likely precipitation event. A likely precipitation event is any weather pattern that is forecast to have a 50 percent probability of producing precipitation in the Project area, as predicted by the National Weather Service. If commencement of a precipitation event is predicted to begin less than 24 hours after the forecast is issued, temporary stabilization of the disturbed in-water work areas must begin immediately.
- ii. No individual construction activity that could discharge sediment or other pollutants may be initiated if that activity and its associated erosion control measures cannot be completed prior to the onset of precipitation. After any rain event, the Permittee shall inspect all sites currently under construction and all sites scheduled to begin construction within the next 72 hours for erosion and sedimentation problems and take corrective action as needed.

I. Temporary Impact Restoration

1. The Permittee shall restore all areas of temporary impacts to waters of the state in accordance with the OC Loop Segments O, P, and Q Bikeway Project Restoration Plan (February 2025), Project specifications submitted as part of the application materials, and discussions with Water Board (via phone on May 22, 2025) regarding post-construction monitoring (section VIII.C.4), approved through the issuance of this Order and incorporated herein by reference.
2. Total required Project restoration information for temporary impacts is summarized in Table 2.

Table 2: Required Project Restoration Quantity for Temporary Impacts

Aquatic Resource Type	Units	Quantity to be Restored
Stream Channel	Acres	2.637

J. Deviation

1. Minor modifications of Project locations or predicted impacts may be necessary as a result of unforeseen field conditions, necessary engineering re-design, construction concerns, or similar reasons. Some of these

prospective Project modifications may have impacts on water quality. Some modifications of Project locations or predicted impacts may qualify as Deviations as set forth in Attachment F. For purposes of this Certification, a "Deviation" is a Project locational or impact modification that does not require an immediate amendment of the Order, because the Water Board has determined that any potential water quality impacts that may result from the change are sufficiently addressed by the Order conditions and the CEQA Findings. After termination of construction, this Order will be amended to reflect all authorized Deviations and any resulting adjustments to the amount of water resource impacts and required compensatory mitigation amounts.

2. A Project modification shall not be granted a Deviation if it would require changes to the Order conditions or the CEQA environmental document such that the Project impacts are not addressed in the Project's environmental document or the conditions of this Order. In this case a supplemental environmental review and different Order will be required.

IX. Public Notice

The Water Board complied with applicable public notice requirements. The Water Board provided public notice of the application pursuant to California Code of Regulations, title 23, section 3858 from June 6, 2025, to June 28, 2025. The Water Board did not receive any comments during the comment period.

X. CEQA

The County of Orange, as lead agency, adopted an IS/MND for the Project on August 13, 2021, and filed a Notice of Determination (NOD) at the State Clearinghouse (No. 2020110244) on October 20, 2021. Pursuant to CEQA, the Water Board has made Findings of Fact (Findings) which support the issuance of this Order and are included in Attachment D.

The Water Board will file a NOD at the State Clearinghouse within 5 business days of issuance of this Order.

XI. Petitions for Reconsideration

Any person aggrieved by this action may petition the Water Board to reconsider this Order in accordance with California Code of Regulations, title 23, section 3867. A petition for reconsideration must be submitted in writing and received within 30 calendar days of the issuance of this Order.

XII. Water Quality Certification

I hereby issue the Certification for the OC Loop Segments O, P, and Q Coyote Creek Bikeway Project, SB20032I, certifying that as long as all of the conditions listed in this Order are met, any discharge from the referenced Project will comply with the applicable provisions of CWA sections 301 (Effluent Limitations), 302 (Water Quality Related Effluent Limitations), 303 (Water Quality Standards and Implementation Plans), 306 (National Standards of Performance), and 307 (Toxic and Pretreatment Effluent Standards).

This discharge is also regulated pursuant to Water Board Water Quality Order No. 2003-0017-DWQ which authorizes this Order to serve as Waste Discharge Requirements pursuant to the Porter-Cologne Water Quality Control Act (Wat. Code, § 13000 et seq.).

Authorization is contingent on: (a) compliance with the conditions of this Order and the attachments to this Order; and (b) compliance with all applicable requirements of Statewide Water Quality Control Plans and Policies, and the Regional Water Boards' Water Quality Control Plans.
