

To Whom it May Concern:

This comment pertains to the document igp\_order\_2102014 as downloaded from the SWRCB industrial storm water web site.

Page 51, paragraph C. Level 1 Status reads as follows:

A Discharger's Baseline status for any given parameter shall change to Level 1 status if sampling results indicate an NAL exceeded for that parameter in any subsequent reporting year. . .

Comment: I believe "subsequent" should be "preceding".

Same wording issue appears at the bottom of page 52, paragraph D. Level 2 Status.

This may be outside the scope for which comments are being solicited, but since the meaning is clear from other language in the permit, this may be considered an editorial change.
