CABW Presentation

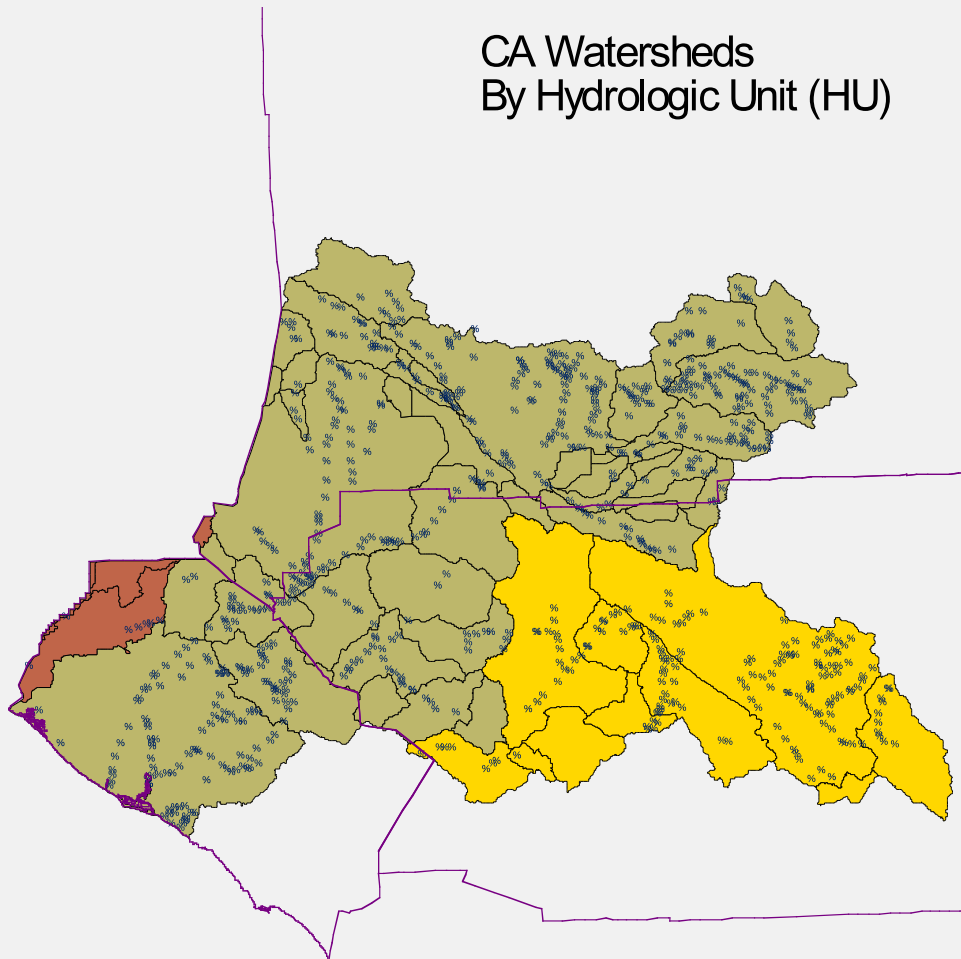

Master of Science in
Geographic Information
Science

STUDY AREA

- Region 8: Located in southern California, the Santa Ana watershed flows west from the San Bernardino Mountains through urban, industrial, commercial, and agriculture land use types, before entering the Pacific Ocean.
- Covers four counties (San Bernardino, Riverside, Los Angeles, and Orange)
- 6 million people in 2010

CA Watersheds By Hydrologic Unit (HU)

County Boundaries
% Stream Sites
CALWATER Watersheds
SAN GABRIEL RIVER
SAN JACINTO VALLEY
SANTA ANA RIVER

55 Watersheds in SARWQCB Boundary
3 in San Gabriel River
10 in San Jacinto Valley
42 in Santa Ana River

7 stream sites in the San Gabriel River HU
160 stream sites in the San Jacinto Valley HU
583 stream sites in Santa Ana River HU

20 0 20 Kilometers

Sites were categorized into three elevation strata within two hydrologic units to ensure sampling occurred throughout the region each year.

Two hydrologic units:
San Jacinto
Santa Ana

Elevation strata:
0 - 350 meters
350 - 700 meters
700+ meters

SITES SAMPLED

	Total	2006	2007	2008	2009	2010	2011	Total

SA_700+	226	7	16	12	13	9	8	57
SJ_350-700	93	3	3	0	0	0	0	6
SJ_700+	67	5	6	4	5	4	0	24
	750	30	30	34	35	31	22	182

GIS

- **GIS for Bioassessment/Casual Assessment/Watershed Management**
 - Visually representing data
 - Geographic patterns of BMI's
 - Spatial statistics
 - Trend monitoring
 - Identify areas of interest (regions of streams most at risk)
 - Facilitate information to stakeholders

DATA AND DATA SOURCES

Geographic Weighted Regression Used for Analysis

Spatial Patterns of Nitrate Coefficient Correlated with IBI Score

Site Locations for Elevation Strata Over 525 Meters in the Santa Ana Watershed, ArcGIS 10.1
 Geographic Weighted Regression Used for Analysis.

DISCUSSION

- Results and visual representation are founded on consistent significant relationships, supported with literature review, and validated with Underwood's 2011 technical report.
- The relationships among stressors and stream health are “interrelated” and vary geographically.
- We can more precisely locate stressors that are negatively affecting BMI's
- Our understanding of water quality and BMI's is improving through different aggregations.

SUGGESTIONS FOR FUTURE USE

- Census tracts/Block groups
 - Demographics
 - Area
- Land use
- Investigating relationships between stressors
 - Bivariate mapping
 - Multivariate mapping
