Partnering With A Host

Since the Clean Water Team is currently just person, the most practical way to conduct a workshop is when an organization hosts a workshop for the Clean Water Team .

The host takes care of the workshop logistics.

The CWT provides instruction, handouts and equipment (as available).

Just contact the Citizen Monitoring Coordinator to start the process

Selection of CWT

Presentations & Training Activities Available for Your Workshop

Safety and Access

Starting a Citizen Monitoring Program

What is Good Data?

Designing an Monitoring Project

Introduction to Parameters and Equipment

Introduction to BioMonitoring/California BioSurvey

California Bioassessment Instruction

How to Work with Volunteers

Others.....

Workshop Venues

Indoor location must be one that can get a little wet. It also needs appropriate seating for presentations.

Outdoor location needs suitable parking, safe access to waterbody, has enough unobtrusive bank for view of demonstrations.

Locations for **bioassessment training** should have close access to both “good” and “bad” sites.

Attendance: Both the Host and the CWT can advertise if there is room for additional attendees beyond the pre-identified needs. This is done through newsletters, flyers and email.

Reservations: Reservations are taken by the Host.

Agenda: A pre-workshop survey is sent to workshop participants. This allows the CWT to tailor content.

An agenda is created by the CWT and Host. The agenda sets the specific content, time, and locations.

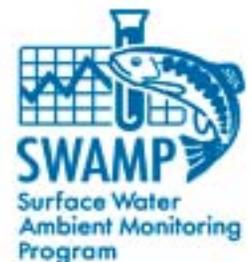

Event Day: Day before or morning of workshop the room must be prepared. Reference tables (guidance docs., catalogs equipment) set up. Food is ordered for snacks and lunch.

Training and activities are performed.

A post training evaluation is conducted at the end of the workshop.

Certificates of Attendance can also be provided to attendees
