Amendment to the Water Quality Control Plan for the Los Angeles Region
to Incorporate a Total Maximum Daily Load for Trash in the Los Angeles River Watershed

WHEREAS, the California Regional Water Quality Control Board, Los Angeles Region,
finds that:

1. The Federal Clean Water Act (CWA) requires the California Regional Water Quality
   Control Board, Los Angeles Region (Regional Board) to establish water quality standards
   for each water body within its region. Water quality standards include beneficial uses,
   water quality objectives that are established at levels sufficient to protect those beneficial
   uses, and an antidegradation policy to prevent degrading waters. Water bodies that do not
   meet water quality standards are considered impaired.

2. CWA section 303(d)(1) requires each state to identify the waters within its boundaries that
   do not meet water quality standards. Those waters are placed on the state's "303(d) List" or
   "Impaired Waters List". For each listed water, the state is required to establish the Total
   Maximum Daily Load (TMDL) of each pollutant impairing the water quality standards in
   that waterbody. Both the identification of impaired waters and TMDLs established for
   those water must be submitted to U.S. EPA for approval pursuant to CWA section
   303(d)(2). For all waters that are not identified as impaired, the states are nevertheless
   required to create TMDLs pursuant to CWA section 303(d)(3).

3. A consent decree between the United States Environmental Protection Agency, Heal the
   Bay, Inc. and BayKeeper, Inc. was approved on March 22, 1999, which resolved litigation
   between those parties relating the pace of TMDL development. The court order directs the
   U.S. EPA to ensure that TMDLs for all 1998-listed impaired waters be established within 13
   years of the decree. A schedule was established in the consent decree for the completion
   of TMDLs, including completion of a TMDL to reduce trash in water bodies of the Los
   Angeles River Watershed.

4. The elements of a TMDL are described in 40 CFR 130.2 and 130.7 and section
   303(d)(1)(C) and (D) of the CWA, as well as in U.S. EPA guidance documents (Report No.
   EPA/440/4-91/001). A TMDL is defined as the sum of the individual waste load
   allocations for point sources, load allocations for nonpoint sources and natural background
   (40 CFR 130.2). TMDLs must be set at levels necessary to attain and maintain the
   applicable narrative and numeric water quality standards with seasonal variations and a
   margin of safety that takes into account any lack of knowledge concerning the relationship
   between effluent limitations and water quality (40 CFR 130.7(c)(1)). 40 CFR 130.7 also
   dictates that TMDLs shall take into account critical conditions for stream flow, loading and
   water quality parameters. TMDLs typically include one or more numeric "targets", i.e.,

August 9, 2007
numerical translations of the existing water quality standards, which represent attainment of those standards, contemplating the TMDL elements described above.

5. Neither TMDLs nor their targets or other components are water quality objectives, and thus their establishment does not implicate Water Code section 13241. Rather, under California Law, TMDLs are programs to implement existing standards (including objectives), and are thus established pursuant to Water Code section 13242. Moreover, they do not create new bases for direct enforcement against dischargers apart from the existing water quality standards they translate. The targets merely establish the bases through which load allocations (LAs) and waste load allocations (WLAs) are calculated. WLAs are only enforced for a discharger's own discharges, and then only in the context of the discharger's National Pollutant Discharge Elimination System (NPDES) permit (or other permit, waiver, or prohibition), which must contain effluent limits consistent with the assumptions and requirements of the WLAs (40 C.F.R. 122.44(d)(vii)(B)). The Regional Board will develop permit requirements through subsequent permit actions that will allow all interested persons, including but not limited to Municipal Separate Stormwater System permittees within the Los Angeles River Watershed, to provide comments on how the WLAs and/or LAs should be translated into enforceable requirements.

6. Upon establishment of TMDLs by the State or USEPA, the State is required to incorporate the TMDLs into the State Water Quality Management Plan (40 CFR 130.6(c)(1), 130.7). The Water Quality Control Plan for the Los Angeles Region (Basin Plan), and applicable statewide plans, serve as the State Water Quality Management Plans governing the watersheds under the jurisdiction of the Regional Board. Attachment A to this resolution contains the Basin Planning language for this TMDL.

7. The Los Angeles River Watershed is located in Los Angeles County, California. The Los Angeles River flows 51 miles from the western end of the San Fernando Valley to the Queensway Bay and Pacific Ocean at Long Beach. In addition to the Los Angeles River, several tributaries and lakes are part of the watershed which drains an area of about 834 square miles. The urbanized portion of the watershed is 609 square miles while the remaining area is mostly taken up by the Angeles National Forest. Current land use in the urban portion of the watershed is 50.8% residential, 22.1% open space and recreation, 7.8% industrial, 6.7% commercial, 5.6% public facilities and educational institutions, and 4% transportation. Beneficial uses of the Los Angeles River and surrounds include wildlife and marine habitat, including habitat for endangered species, and recreational activities such as fishing, walking, hiking, jogging, bicycling, horseback riding, bird watching and photography. Los Angeles River is divided into six reaches. The 1998 Clean Water Act 303(d) lists identify Reaches 1, 2, 3, 4, and 5 of the Los Angeles River, as impaired for trash. Tujunga Wash, Burbank Western Channel, Verdugo Wash (Reaches 1 and 2), Arroyo Seco (Reaches 1 & 2), and Rio Hondo (Reach 1) are tributaries of the Los Angeles River that are listed as impaired for trash. In addition, Peck Road Lake, Echo Park Lake and Lincoln Park Lake are listed as tash-impaired. This listing was approved by the State Water Resources Control Board on May 27, 1998. The proposed TMDL addresses impairments of water quality caused by trash in the afore-mentioned waterbodies of the Los Angeles River Watershed.

8. Although the Los Angeles River Estuary was not itself identified as impaired on the 1998 303(d) list, the data and information available to the board demonstrates that this reach is in fact impaired. The more recent 2006 303(d) list includes the Los Angeles Estuary as...
impaired for trash. Therefore this TMDL includes Waste Load Allocations that would ensure attainment of standards in the Estuary.

9. The Water Quality Control Plan for the Los Angeles Region prescribes narrative water quality objectives that are applicable to trash. These water quality objectives include floating materials:

"Waters shall not contain floating materials, including solids, liquids, foams, and scum, in concentrations that cause nuisance or adversely affect beneficial uses;"

and solid suspended or settleable materials:

"Waters shall not contain suspended or settleable material in concentrations that cause nuisance or adversely affect beneficial uses."

10. The Regional Board's goals in establishing the TMDL for trash in the waterbodies of the Los Angeles River Watershed is to adopt a regulation designed to guide subsequent regulatory actions to ensure existing water quality standards are attained. This includes the objectives described above, and protecting the beneficial uses of the Los Angeles River, its tributaries, downstream waters, and the lakes within its watershed, and to achieve the water quality objectives set to protect those uses. The Regional Board's goals also include complying with the requirements of CWA section 303(d), and avoiding federal intervention in state water-quality planning, as would occur if the state failed to timely establish its TMDLs.

11. The Technical Report for the TMDL, prepared by staff, is titled "Trash Total Maximum Daily Loads for the Los Angeles River Watershed" and dated July 27, 2007. It identifies storm drain discharges as the primary source of trash in the waterbodies of the Los Angeles River Watershed. When a storm event occurs, the litter is washed through the storm drain sewers into the Los Angeles River, the Estuary, the beaches at Long Beach, and the Pacific Ocean. Waste Load Allocations are assigned to the Pennittees and Co-pennittees of the Los Angeles County Municipal Stormwater Permit and Caltrans. In addition, Waste Load Allocations may be issued to additional facilities in the future under Phase II of the US EPA Stormwater Permitting Program. The Waste Load Allocations assigned under the MS4 permit and the Caltrans permit is based on a phased reduction from the estimated baseline discharge.

12. Nonpoint source discharges (direct deposition or aerial deposit) are de minimus, and do not contribute an appreciable amount of trash to the impairment. Nonpoint source discharges will be regulated through waste discharge requirements, waivers, cleanup and abatement orders, or other appropriate regulatory tools at the discretion of the Executive Officer.

13. Compliance with the final Waste Load Allocation may be achieved through a full capture system; which is defined as any device or series of devices that traps all particles retained by a 5mm mesh screen and has a design treatment capacity of not less than the peak flow rate (Q) resulting from a one-year, one-hour storm in the sub-drainage area. The Executive Officer has authority to certify, as full-capture, trash reduction systems that meet the operating and performance requirements as described above. To date seven full capture systems have received certification; including (i) trash nets for the City of Signal Hill, (ii) two gross solids removal devices for the California Department of Transportation, (iii) catch basin brush inserts and mesh screens for the cities of Glendale, Pasadena, La Canada Flintridge, and Burbank, (iv) vertical and horizontal trash capture screen inserts for the City

August 9, 2007
of Los Angeles, and (v) a connector pipe screen device for the Los Angeles County Department of Public Works.

14. The Regional Board finds the proposed implementation schedule is both appropriate and feasible. The Regional Board finds that trash in the Los Angeles River is a significant impairment of water quality; therefore it is appropriate to proceed as expeditiously as possible to remedy these impairments. The Regional Board finds the schedule is feasible for several reasons. The Los Angeles River was listed as impaired on the 1998 303(d) list, therefore, responsible jurisdictions have known for 9 years that significant trash reduction efforts are necessary, and that regulations will be issued that require dramatic reductions in trash discharges. The proposed reductions are from baseline conditions established directly following the adoption of the 2001 Los Angeles River Watershed trash TMDL during the 2002 - 2004 storm years. Many dischargers have undertaken trash reduction actions throughout the watershed, including implementation of full-capture devices. There are, to date, seven full capture devices certified by the Executive Officer developed by Los Angeles River watershed responsible agencies that are available for immediate implementation to comply with this TMDL. Any actions taken to reduce trash since the baseline was established, contribute to compliance with the proposed schedule for this TMDL. Further, substantial trash reduction actions are required of responsible agencies under existing MS4 permits, irrespective of the Trash TMDL, and good faith compliance with those requirements, which have been in effect since 2001, would result in significant trash abatement.

15. On September 19, 2001, the Regional Board adopted a Basin Plan Amendment (Resolution 01-013) incorporating the Los Angeles River Trash TMDL into the Water Quality Control Plan (Basin Plan) for the Coastal Watersheds of Los Angeles and Ventura Counties. The TMDL subsequently was approved by the State Water Resources Control Board on February 19, 2002 and by the Office of Administrative Law on July 16, 2002. The United States Environmental Protection Agency approved the Los Angeles River Trash TMDL on August 1, 2002.

16. The City of Los Angeles and the County of Los Angeles both filed petitions in Los Angeles Superior Court challenging the Los Angeles River Trash TMDL. Subsequent negotiations led to a settlement agreement, which became effective on September 23, 2003.

17. Twenty-two other cities' ("Cities") sued the Los Angeles Regional Water Quality Control Board (Los Angeles Water Board) and State Water Resources Control Board (State Water Board) to set aside the TMDL, on several grounds. On January 26, 2006, the Court of Appeal decided every one of the Cities' claims in favor of the Water Boards, except with respect to their CEQA compliance. (City of Arcadia et al., Los Angeles Regional Water Quality Control Board et al. (2006) 135 Cal.App.4th 1392.) The Cities filed a petition for review by the California Supreme Court, but on April 19, 2006, the Supreme Court declined to hear the Cities' claims.

18. The Court of appeal rejected the following claims litigated by the Cities:

---

1 The cities include Arcadia, Baldwin Park, Bellflower, Cerritos, Commerce, Diamond Bar, Downey, Irwindale, Lawndale, Monrovia, Montebello, Monterey Park, Pico Rivera, Rosemead, San Gabriel, Santa Fe Springs, Sierra Madre, Signal Hill, South Pasadena, Vernon, West Covina, and Whittier. They are members of a group that refers to itself as "The Coalition for Practical Regulation."

August 9, 2007
The Court rejected the Cities' claim that the target of zero trash is unattainable and inordinately expensive. (135 Cal.App.4th at 1413 and 1427-1430.)

The Court rejected the Cities' claim that an assimilative capacity study was required before the Water Boards could determine how much trash, a pollutant that does not assimilate, would violate the narrative objectives. (135 Cal.App.4th at 1409-1413.)

The Court rejected the Cities' claim that the Water Boards were required, but failed, to conduct a cost/benefit analysis and consideration of economic factors. (135 Cal.App.4th at 1415-1418.)

The Court rejected the Cities' claim that the Water Boards were prohibited from establishing a TMDL for the Los Angeles River Estuary until it was formally listed on the 303(d) list. (135 Cal.App.4th at 1418-1420.)

The Court rejected the Cities' claims that TMDLs for storm water may not require agencies to perform better than the "maximum extent practicable", and must allow compliance through best management practices. (135 Cal.App.4th at 1427-1430.)

The Court rejected the Cities' claim that the Water Boards were required to implement load allocations for nonpoint sources of trash pollution. (135 Cal.App.4th at 1430-1432.)

The Court rejected the Cities' claim that the Water Boards failed to adhere to the data collection and analysis required by federal and state law (135 Cal.App.4th at 1433-34.)

The Court rejected the Cities' claim that the Water Boards relied on nonexistent, illegal, and irrational uses to be made of the Los Angeles River. (135 Cal.App.4th at 1432-33.)

The Court rejected the Cities' claim that the Water Boards violated the Administrative Procedures Act (APA). (135 Cal.App.4th at 1434-35.)

The Court did find, however, that the Water Boards did not adequately complete the environmental checklist, and that evidence of a "fair argument" of significant impacts existed such that the California Water Boards should have performed an EIR level of analysis through an EIR or its functional equivalent. (135 Cal.App. 4th at 1420-26.) The Court therefore affirmed a writ of mandate issued by the trial court, which orders the California Water Boards to set aside and not implement the TMDL until it has been brought into compliance with the California Environmental Quality Act (CEQA).

On June 8, 2006 the Regional Board set aside the trash TMDL and resolution # 01-013 which established it, pursuant to the writ of mandate and to sections 13240 and 13242 of the Water Code. Setting aside the TMDL was not deemed a repudiation of the settlement agreement entered into between the Los Angeles Regional Water Quality Control Board and the City of Los Angeles and the County of Los Angeles, which was executed on September 24, 2003, and the Los Angeles Water Board expressed its continued intent to be bound by that agreement. The Regional Board also directed staff to revise the CEQA documentation as directed by the writ of mandate, and to prepare and submit for the Regional Board's reconsideration, a TMDL for Trash in the Los Angeles River Watershed.
consistent with the requirements of the writ. Staff was also directed to incorporate into its
proposed revised TMDL the changes agreed upon in the settlement with the City of Los
Angeles, Los Angeles County and the Los Angeles County Flood Control District.

21. The CEQA documentation was revised as directed by the writ of mandate, and the Regional
Board believes its obligations under the writ have been satisfied. The TMDL includes the
changes agreed upon in the settlement with the City of Los Angeles, Los Angeles County and
the Los Angeles County Flood Control District, and the provisions of this TMDL satisfy the
Regional Board's responsibilities under that settlement agreement.

22. On August 9, 2007, prior to the Board's action on this resolution, a public hearing was
conducted on the TMDL for Trash in the Los Angeles River Watershed. Notice of the hearing
was published in accordance with the requirements of Water Code section 13244. This notice
was published in the Los Angeles Times on March 20, 2007.

23. The public has had reasonable opportunity to participate in review of the amendment to the
Basin Plan. The first draft TMDL was released on July 7, 2006, and comments were solicited
on that draft. A similar draft Trash TMDL was released for public comment on March 20,
2007, a Notice of Hearing and Notice of Filing were published and circulated 45 days
preceding Board action; Regional Board staff responded to oral and written comments
received from the public; and the Regional Board held a public hearing on August 9, 2007, to
consider adoption of the TMDL.

24. Because the TMDL implements existing narrative water quality objectives (i.e., no floating,
materials, or solid suspended or settleable material), the Regional Board (along with the State
Water Resources Control Board) has determined that adopting a TMDL does not require
consideration of the factors set forth in Water Code section 13241. The consideration of the
Water Code section 13241 factors, by section 13241's express terms, only applies when
"establishing water quality objectives." Here the Regional Board is not establishing water
quality objectives, but as required by section 303(d)(I)(C) of the Clean Water Act is, adopting
a TMDL that will implement the previously established objectives that have not been
achieved. Implementation of standards is governed by Water Code section 13242, not 13241.
In making this determination, the Regional Board has considered and relied upon a legal
memorandum from the Office of Chief Counsel to the State Water Board's basin planning
staff detailing why TMDLs cannot be considered water quality objectives. (See Memorandum
from the Staff Counsel Michael J. Levy, Office of Chief Counsel, to Ken Han-is and Paul
Lillebo, Division of Water Quality: The Distinction Between a TMDL's Numeric Targets and
Water Quality Standards, dated June 12, 2002.)

25. While the Regional Board is not required to consider the factors of Water Code section 13241,
in view of the requests of commenters, the Regional Board has nonetheless developed and
received substantial information pertaining to the Water Code section 13241 factors. The
Regional Board has considered that information in developing and adopting this TMDL.
Notably, the section 13241 factors cannot be used to circumvent the federal requirements
contained in section 303(d), which require that the TMDL be established at a level necessary
to implement existing water quality standards.

26. The past, present, and probable future beneficial uses of water have been considered in that
the water bodies of the Los Angeles River Watershed are designated for a multitude of

August 9, 2007
beneficial uses in the Basin Plan. These beneficial uses include Municipal and Domestic Supply, Ground Water Recharge (GWR), Water Contact Recreation (REC1), Non-Contact Water Recreation (REC2), Warm Freshwater Habitat (WARM), Wildlife Habitat (WILD), and Wetland Habitat (WET). The environmental characteristics of the trash-impaired waterbodies of the Los Angeles River Watershed are spelled out at length in the Basin Plan and in the technical documents supporting this Basin Plan amendment, and have been considered in developing this TMDL. Water quality conditions that reasonably could be achieved through the coordinated control of all factors which affect water quality in the area have been considered. Compliance measures such as public education, increased street sweeping, enforcement of existing litter laws, and installation of structural trash-control devices, are feasible options to be considered in attaining the numeric target of zero trash discharges. Establishing a plan that will ensure the trash-impaired waterbodies of the Los Angeles River Watershed attain water quality standards is a reasonable water quality condition. Economic considerations were considered throughout the development of the TMDL. Some of these economic considerations arise in the context of Public Resources Code section 21159 and are equally applicable here. The implementation program for this TMDL recognizes the economic limitations on achieving immediate compliance and allows a flexible implementation schedule of nine years. The need for housing within the region has been considered, but this TMDL is unlikely to affect housing needs since structural trash control measures will be implemented in already existing stormwater systems thereby circumventing land acquisition constraints. Whatever housing impacts could materialize can be ameliorated by the flexible nature of this TMDL and the implementation schedule.

27. The amendment is consistent with the State Anti-degradation Policy (State Board Resolution No. 69-16), in that the changes to water quality objectives (i) consider maximum benefits to the people of the state, (ii) will not unreasonably affect present and anticipated beneficial use of waters, and (iii) will not result in water quality less than that prescribed in policies. Likewise, the amendment is consistent with the federal Antidegradation Policy (40 CFR 131.12).

28. Pursuant to Public Resources Code section 21080.5, the Resources Agency has approved the Regional Water Boards' basin planning process as a "certified regulatory program" that adequately satisfies the California Environmental Quality Act (CEQA) (Public Resources Code, Section 21000 et seq) requirements. (14 Cal. Code Regs. § 15251(g); 23 Cal. Code Regs. § 3782.) The Regional Water Board staff has prepared "substitute environmental documents" for this project that contain the required environmental documentation under the State Water Board's CEQA regulations. (23 Cal. Code Regs. § 3777.) The substitute environmental documents include the TMDL staff report entitled "Trash TMDLs in the Los Angeles River Watershed", the report entitled Substitute Environmental Documents, the environmental checklist, the comments and responses to comments, the basin plan amendment language, and this resolution. The project itself is the establishment of a TMDL for trash in the Los Angeles River Watershed. While the Regional Board has no discretion to not establish a TMDL (the TMDL is required by federal law), and no discretion to establish a TMDL that does not implement water quality standards, the Board does exercise discretion in assigning waste load allocations and load allocations, determining the program of implementation, and setting various milestones in achieving the water quality standards. The CEQA checklist and other portions of the substitute environmental documents contain significant analysis and numerous findings related to impacts and mitigation measures.

August 9, 2007
29. A CEQA Scoping meeting was conducted on June 28, 2006 at the Ronald Reagan State Office Building, 300 South Spring Street, Los Angeles, CA 90013. A notice of the CEQA Scoping meeting was sent to interested parties including the cities and/or counties with jurisdiction in or bordering the Los Angeles River watershed.

30. In preparing the substitute environmental documents, the Regional Board has considered the requirements of Public Resources Code section 21159 and California Code of Regulations, title 14, section 15187, and intends those documents to serve as a tier 1 environmental review. This analysis is not intended to be an exhaustive analysis of every conceivable impact, but an analysis of the reasonably foreseeable consequences of the adoption of this regulation, from a programmatic perspective. Many compliance obligations will be undertaken directly by public agencies that will have their own obligations under CEQA. In addition, public agencies, such as the Los Angeles County Department of Public Works, California Department of Transportation and various municipalities within the watershed, are foreseeably expected to facilitate compliance obligations, and to the extent that the proposed projects, including installation of best management practices (BMPs), are subject to project-level CEQA analysis, the public agency may assume those responsibilities. Responsible jurisdictions who propose BMPs that impact waters of the State through dredge or fill operations will be subjected to applicable State and federal permitting requirements. In this instance, the "Lead" agencies for such "Tier 2" projects, are legally required to ensure compliance with project-level CEQA analysis of this programmatic project. Project level impacts will need to be considered in any subsequent environmental analysis performed by other public agencies, pursuant to Public Resources Code section 21159.2. To the extent applicable, the "Tier 1" environmental analysis for this project may be used to satisfy the subsequent CEQA obligations of those agencies.

31. Consistent with the Regional Board's substantive obligations under CEQA, the substitute environmental documents do not engage in speculation or conjecture, but they do consider the reasonably foreseeable environmental impacts, including those relating to the methods of compliance, reasonably foreseeable feasible mitigation measures to reduce those impacts, and the reasonably foreseeable alternative means of compliance, which would avoid or reduce the identified impacts.

32. The proposed amendment could have a potentially significant adverse effect on the environment. However, there are feasible alternatives, feasible mitigation measures, or both, that if employed, would substantially lessen the potentially significant adverse impacts identified in the substitute environmental documents. Such alternatives or mitigation measures, however, are within the responsibility and jurisdiction of other public agencies, and not the Regional Board. Water Code section 13360 precludes the Regional Board from dictating the manner in which responsible agencies comply with any of the Regional Board's regulations or orders. When the agencies responsible for implementing this TMDL determine how they will proceed, the agencies responsible for those parts of the project can and should incorporate such alternatives and mitigation into any subsequent projects or project approvals. These feasible alternatives and mitigation measures are described in more detail in the substitute environmental documents. (14 Cal. Code Regs. § 15091(a)(2).)

33. From a program-level perspective, incorporation of the alternatives and mitigation measures outlined in the substitute environmental documents would foreseeably reduce impacts to less than significant levels.

August 9, 2007
34. The substitute documents for this TMDL, and in particular the Substitute Environmental Document containing the CEQA Checklist and staff's responses to comments, identify broad mitigation approaches that should be considered at the project level. Nevertheless, given the area covered by this regulation, the Regional Board recognizes that individual responsible agencies when conducting a project-level analysis pursuant to Public Resources Code section 21159.2, may determine that not all of the feasible alternatives or feasible mitigation measures may be determined to be feasible at all necessary locations in the watershed. In such circumstances, responsible agencies may be required to make their own project-level findings pursuant to sections 15091 and 15093 of title 14 of the California Code of Regulations prior to proceeding. Finally, in view of Water Code section 13360, the Regional Board recognizes that it cannot compel responsible agencies to employ the feasible alternatives or mitigation measures recommended in the substitute environmental documents. Accordingly, the Regional Board concedes the possibility that unforeseeable impacts could occur, and impacts might not properly be mitigated at the project level, should the responsible agencies not proceed according to generally accepted engineering, construction, and environmental practices.

35. To the extent significant adverse environmental effects could occur, the Regional Board has balanced the economic, legal, social, technological, and other benefits of the TMDL against the unavoidable environmental risks and finds that specific economic, legal, social, technological, and other benefits of the TMDL outweigh the unavoidable adverse environmental effects, such that those effects are considered acceptable. The basis for this finding is more fully set forth in the substitute environmental documents. (14 Cal. Code Regs. § 15093.)

36. The regulatory action meets the "Necessity" standard of the Administrative Procedures Act, Government Code, Section 11353, Subdivision (b). As specified above, Federal law and regulations require that TMDLs be incorporated into the water quality management plan. The Regional Board's Basin Plan is the Regional Board's component of the water quality management plan, and the Basin Plan is how the Regional Board takes quasi-legislative, planning actions. Moreover, the TMDL is a program of implementation for existing water quality objectives, and is, therefore, appropriately a component of the Basin Plan under Water Code section 13242. The necessity of developing a TMDL is established in the TMDL staff report, CWA section 303(d), the data contained in the administrative record documenting the trash impairments in the Los Angeles River Watershed, and the fact that EPA has approved the identification of the water bodies as impaired.

37. The Basin Plan amendment incorporating a TMDL for trash in the Los Angeles River Watershed must be submitted for review and approval by the State Water Resources Control Board (State Board), the State Office of Administrative Law (OAL), and the USEPA. The Basin Plan amendment will become effective upon approval by OAL and USEPA. A Notice of Decision will be filed with the Resources Agency.

38. If during the State Board's approval process Regional Board staff, the SWRCB or OAL determines that minor, non-substantive modifications to the language of the amendment are needed for clarity or consistency, the Executive Officer should make such changes consistent with the Regional Board's intent in adopting this TMDL, and should inform the Board of any such changes.

August 9, 2007
THEREFORE, be it resolved that pursuant to sections 13240 and 13242 of the Water Code, the Regional Board hereby amends the Basin Plan as follows:

Pursuant to sections 13240 and 13242 of the California Water Code, the Regional Board, after considering the entire record, including oral testimony at the hearing, hereby adopts the amendments to Chapters 3 and 7 of the Water Quality Control Plan for the Los Angeles Region, as set forth in Attachment A hereto, to incorporate the elements of the trash TMDL for the Los Angeles River Watershed.

2. The Regional Board hereby approves and adopts the CEQA substitute environmental documentation, including all findings contained therein, which was prepared in accordance with Public Resources Code section 21159 and California Code of Regulations, title 14, section 15187, and in accordance with section 3777 of title 23.

3. The Executive Officer is directed to forward copies of the Basin Plan amendment to the State Board in accordance with the requirements of section 13245 of the California Water Code.

4. The Regional Board requests that the State Board approve the Basin Plan amendment in accordance with the requirements of sections 13245 and 13246 of the California Water Code and forward it to OAL and the U.S. EPA.

5. If during the State Board's approval process, Regional Board staff, the State Board or OAL determines that minor, non-substantive modifications to the language of the amendment are needed for clarity or consistency, the Executive Officer may make such changes, and shall inform the Board of any such changes.

6. The Executive Officer is authorized to sign a Certificate of Fee Exemption, or transmit payment of the applicable fee, as may be required, to the Resources Agency.

I, Deborah Smith, Interim Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of a resolution adopted by the California Regional Water Quality Control Board, Los Angeles Region, on August 9, 2007.

Deborah J. with
Interim Executive Officer

August 9, 2007
Attachment A to Resolution No. 07-012

Amendment to the Water Quality Control Plan – Los Angeles Region to incorporate the TMDL for Trash in the Los Angeles River Watershed

Adopted by the California Regional Water Quality Control Board, Los Angeles Region on August 9, 2007.

Amendments:

Table of Contents
Add:

Chapter 7. Total Maximum Daily Loads (TMDLs) Summaries
   7-2. Los Angeles River Watershed Trash TMDL

List of Figures, Tables and Inserts
Add:

Chapter 7. Total Maximum Daily Loads (TMDLs) Tables

7-2 Los Angeles River Watershed Trash TMDL
   7-2.1. Los Angeles River Watershed Trash TMDL Elements
   7-2.2. Los Angeles River Watershed Trash TMDL Baseline Waste Load Allocations
   7-2.3. Los Angeles River Watershed Trash TMDL Implementation Schedule

Chapter 3. Water Quality Objectives
Regional Objectives for Inland Surface Waters

Floating Material 3-9
   A fourth paragraph will be added under Floating Material referencing specific guidelines for the Los Angeles River. Additional narrative to read: "See additional regulatory guidelines described under the Los Angeles River Trash Total Maximum Daily Load (Chapter 7)."

Solid, Suspended, or Settleable Materials 3-16
   A fourth paragraph will be added under Solid, Suspended, or Settleable Materials referencing specific guidelines for the Los Angeles River. Additional narrative to read: "See additional regulatory guidelines described under the Los Angeles River Trash Total Maximum Daily Load (Chapter 7)."

* The complete administrative record for the TMDL is available for review upon request.
Chapter 7. Total Maximum Daily Loads (TMDLs) Summaries, Section 7-2 (Los Angeles River Watershed Trash TMDL)

This TMDL was adopted by the Regional Water Quality Control Board on August 9, 2007.

This TMDL was approved by:
The State Water Resources Control Board on [Insert Date].
The Office of Administrative Law on [Insert Date].
The U.S. Environmental Protection Agency on [Insert Date].

The following table includes all the elements of this TMDL.
### Table 7-2.1. Los Angeles River Watershed Trash TMDL: Elements

<table>
<thead>
<tr>
<th>Element</th>
<th>Key Findings and Regulatory Provisions</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Problem Statement</strong></td>
<td>Trash in the Los Angeles River is causing impairment of beneficial uses. The following designated beneficial uses are impacted by trash: water contact recreation (REC1); non-contact water recreation (REC2); warm freshwater habitat (WARM); wildlife habitat (WILD), estuarine habitat (EST); marine habitat (MAR); rare and threatened or endangered species (RARE); migration of aquatic organisms (MIGR); spawning, reproduction and early development of fish (SPWN); commercial and sport fishing (COMM); shellfish harvesting (SHELL); wetland habitat (WET); and cold freshwater habitat (COLD).</td>
</tr>
<tr>
<td><strong>Numeric Target</strong></td>
<td>Zero trash in all waterbodies.</td>
</tr>
<tr>
<td><strong>Source Analysis</strong></td>
<td>Stormwater discharge is the major source of trash in the river. Nonpoint sources, i.e., direct deposition of trash by people or wind into the water body, is a de minimus source of trash loading to the LA River.</td>
</tr>
<tr>
<td><strong>Loading Capacity</strong></td>
<td>Zero</td>
</tr>
<tr>
<td><strong>Waste Load Allocations</strong></td>
<td>Baseline Waste Load Allocations for each city in the Los Angeles River Watershed are as provided in Table 7.2.2. The TMDL requires phased reductions over a period of 9 years, from existing baseline loads to zero (0). Phase II stormwater permittees (including educational institutions) also have a final wasteload allocation of zero. An implementation schedule for these permittees will be established once their stormwater permit has been developed.</td>
</tr>
<tr>
<td><strong>Load Allocations</strong></td>
<td>The load allocations for nonpoint source trash discharges to the LA River are zero.</td>
</tr>
</tbody>
</table>
| **Implementation**            | This TMDL will be implemented through stormwater permits and via the authority vested in the Executive Officer by section 13267 of the Porter-Cologne Water Quality Control Act: (Water Code section 13000 et seq.). Point Source Compliance with the final waste load allocation may be achieved through a full capture system. A full capture system is any device or series of devices that traps all particles retained by a 5 mm mesh screen and has a design treatment capacity of not less than the peak flow rate (Q) resulting from a one-year, one-hour, storm in the subdrainage area. The Rational Equation is used to compute the peak flow rate: $Q = C \times 1 \times A$, where $Q =$ design flow rate (cubic feet per second, cfs); $C =$ runoff $
Element | Key Findings and Regulatory Provisions
--- | ---
coefficient (dimensionless); $I = \text{design rainfall intensity (inches per hour, as determined per the rainfall isohyetal map in Figure A)}$, and $A = \text{subdrainage area (acres)}$. The isohyetal map may be updated annually by the Los Angeles County hydrologist to reflect additional rain data gathered during the previous year. Annual updates published by the Los Angeles County Department of Public Works are prospectively incorporated by reference into this TMDL and accompanying Basin Plan amendment.  

The Executive Officer has authority to certify, as full-capture, any trash reduction system that meets the operating and performance requirements as described above.

**Non-point Source**  
To the extent nonpoint source implementation of load allocations is necessary, it will be accomplished, consistent with the Plan for Nonpoint Source Pollution Control Policy, with waste discharge requirements, waivers of waste discharge requirements, or any appropriate order, including a cleanup and abatement order, pursuant to e.g., sections 13263, 13269, and/or 13304.

An implementation report, outlining how responsible agencies intend to comply with the TMDL, will be prepared six months after the effective date of the TMDL.

**Margin of Safety**  
“Zero discharge” is a conservative standard which contains an implicit margin of safety.

**Seasonal Variations and Critical Conditions**  
Discharge of trash from the storm drain occurs primarily during or shortly after a rain event of greater than 0.25 inches.

</tbody>
</table>

\(^{1}\) “Notwithstanding the zero trash target and the baseline waste load allocations shown in Table 5, a Permittee will be deemed in compliance with the Trash TMDL in areas served by a Full Capture System within the Los Angeles River Watershed.”

\(^{2}\) As specified in Section VI.A., the Regional Board will review and reconsider the final Waste Load Allocations once a reduction of 50% has been achieved and sustained in the watershed.
