Impacted Beach(es)					Cause of Impact			
Beach Name	Location	Beginning	Ending	Total Days	Type	Volume (gallons)	Cause / Receiving Water	Length posted ft.
*Closures (sewage)				50			Closure days	217
Advisories (monitoring, precautionary, other)				186			Advisory days does not include simultaneous postings or Chronic days	1143
General Advisories				13			General Advisory days	49
<b>Total Water Contamination Events</b>				<b>249</b>			<b>Total Days</b>	<b>1409</b>
							Chronic days not included in total days figure above	530

\*Events that are reductions in shoreline lengths have been omitted in this tally. An event at an adjacent beach in the same city (e.g., Coronado / Silver Strand State Beach) closed for the same event is only counted as one event.

### Changes in monitoring in 2001

1 In 2000, Advisories were issued for locations where monitoring indicated bacterial levels exceeded standards during General Advisory periods Jan 1 - Mar 31.

In 2001, Advisories were NOT issued for locations where monitoring indicated bacterial levels exceeded standards during General Advisory periods Jan 1 - Mar 31.

This change in policy was made to prevent confusion caused by only posting monitored beaches during General Advisories when ocean and bay water contamination by urban runoff is county-wide.

State law requires advisories to be issued when bacterial levels exceed standards any time during Apr 1 - Oct 31.  
(AB 411 Season)

2 The City of San Diego stopped sampling at ten ocean shoreline stations in July 2000.

DEH continued sampling at eight of these ten stations during AB 411 season only; therefore these stations were not sampled Jan 1 - Mar 31, 2001

3 The City of San Diego stopped sampling at twenty shoreline stations in Mission Bay in July 2001.

DEH continued sampling at 17 of these 20 stations in Mission Bay during AB 411 season only; therefore these stations were not sampled Nov 1 - Dec 31, 2001

4 DEH sampling protocol was changed in April 2001. At beaches with coastal outlets, routine sampling stations were moved to 25 yards downcoast from the mixing zone to conform with the State's and other agencies recommendations.

This applies to all samples collected by DEH EXCEPT those in Mission Bay.

During AB 411 season, DEH collects 57 out of 100 weekly samples at San Diego County beaches.

5 As part of this change in sampling protocol, permanent metal health risk warning signs like this one were posted at the coastal outlets listed below. DEH requested these signs be placed at outlets with dry weather flows. Sign placement was not based upon historical monitoring data.

#### Oceanside

San Luis Rey River outlet, Wisconsin St, Hay St, Oceanside Blvd, and Buccaneer Beach

#### Carlsbad

Buena Vista Lagoon outlet, Carlsbad Village Dr, Tamarack, and Batiquitos Lagoon outlet
