Permanently posted storm drain outlets

Rain creates urban runoff flows from coastal storm drain, river, and lagoon outlets that contaminate ocean and bay waters. The Department of Environmental Health (DEH) issues a General Advisory to avoid contact with all ocean and bay waters for 72 hours after rainfall amounts greater than 0.2 inches.

During dry weather, the DEH advises avoiding contact with runoff from storm drain, river, and lagoon outlets as well as ocean or bay waters within 75 feet of an outlet.

The following coastal outlets can have urban runoff flows during dry weather. These locations are posted with DEH permanent metal storm drain outlet warning signs:
