January 27, 2006 Craig J. Wilson, Chief Monitoring and TMDL Listing Unit Division of Water Quality State Water Resources Control Board P.O. Box 100 Sacramento, CA 95812-0100

### Subject: Supplementary Comments on Draft 2006 303(d) list

Dear Mr. Wilson:

Ì.

The members of the Calleguas Creek Watershed Management Plan (CCWMP) have asked Larry Walker Associates to provide additional information to further support comments presented in the January 18, 2006 letter signed by CCWMP Chair Judy Mikels. This letter provides supplementary information for comments provided in the original letter on zinc and nickel listed in Reach 1 of the Calleguas Creek watershed (CCW).

We are requesting your consideration of this information because we were only recently able to accurately identify where the samples that were used in the original listings were collected and because a TMDL is currently required to be completed for these constituents by a Consent Decree this year.

## Background

The original recommendations for listings for total nickel and total zinc in Calleguas Creek Reach 1 (Mugu Lagoon) were presented in the LA Regional Water Quality Control Board's 1996 Water Quality Assessment and Documentation. However, a review of the available data does not suggest there are impairments.

A review of the available information revealed how US Navy sampling locations were utilized in 1994 and 1999 to characterize Reach 1. The review led to an understanding that not all of the samples collected by the Navy were intended to characterize the lagoon. Rather, the great majority of the samples collected by the Navy in 1994 and subsequent years were intended to investigate the sources of pollutants to the lagoon. The transport mechanism for many of these sources being through a network of drainage ditches on the Navy base partially displayed in Figures 1 and 2.

Subsequent to the listings, dissolved zinc and nickel data were collected through two monitoring programs in addition to the Navy. These programs were the Calleguas Creek Characterization Study (CCCS, 1998-1999) and the Calleguas Creek Watershed Metals Total Maximum Daily Load Monitoring Program (CCTMDL, 2003-2004).

# Process for Determining Data to Use in Analysis

Two steps were taken to determine which data were appropriate for consideration in the 303(d) analysis. The first was to identify any non-detected data with detection limits exceeding the corresponding CTR criteria. Non-detected data with detection limits exceeding the corresponding CTR criteria were not used in the 303(d) listing analysis per section 6.1.5.5 of the Water Quality Control Policy for Developing California's Clean Water Act Section 303(d) List (Listing Policy). These data were not used because one would not be able to ascertain whether the concentration in the sample exceeded the criteria or not. As such, it would be inappropriate to use these data to evaluate impairments to beneficial uses.

The second step was to identify data collected within what could be considered the receiving waters of Reach 1 Mugu Lagoon. Samples collected in Reach 1 to characterize the lagoon were retained for the 303(d) listing analysis. Samples collected near Reach 1 to characterize sources of contamination to the lagoon were not considered. This approach is similar to other 303(d) listing analysis where only data collected within the receiving water portion of the reach is considered and land use discharge data are not. Samples collected for the purpose of characterizing sources of contamination to the lagoon could be considered for use in listing the specific drainage ditches as has been done with Oxnard Drains No. 2 and No. 3.

Sampling locations and what the corresponding data characterize for the Calleguas Creek Characterization Study, TMDL Monitoring Program, and the Navy after 1999 are relatively well known. However, for data collected by the Navy between 1994 and 1999 it is not as clear which sampling locations corresponded to sites that characterized the lagoon or characterized sources of contamination to the lagoon.

The following two reports completed for the Navy provided information regarding sample collection locations and whether the locations provided information on receiving waters or discharge data:

- Draft Final Phase I Remedial Investigation (Phase 1 RI) Technical Memorandum for Naval Air Weapons Station Point Mugu, California (Tetra Tech, 1998)
- Draft Remedial Investigation for Groundwater (GW RI) Report Naval Base Ventura County Point Mugu Site, California (Tetra Tech, 2001)

The Phase 1 RI and GW RI provide narrative descriptions of what each sampling location was intended to characterize in 1994 and 1999, respectively. These two reports were used to determine which samples would be used based on whether they would have characterized the lagoon or sources of contamination to the lagoon. The Phase 1 RI discusses water sampling conducted in 1994 in section 8.4 (pg 8-4 through 8-7) and section 12.4 (pg 12-6 through 12-11). The GW RI discusses water sampling conducted in 1999 in section 4.4.3 (pg 4-15 through 4-16). Maps 1 and 2 display sampling locations used in 1994 and 1999, respectively. These maps were not relied upon to determine whether a sampling location would characterize the lagoon or

sources of contamination to the lagoon because of potential issues associated with GIS coordinates used for identifying locations and land features such as drains.

It is important to consider the intended purpose of sampling locations as described in the Phase 1 RI and the GW RI because they offer insight into whether each given sample was collected with the intent of representing receiving water or discharges to receiving waters. The intended purpose allows insight into the condition at the sampling location during the time of sample collection.

# Results

## Zinc Water Column Listing

Appendix 1 presents a table listing all of the dissolved zinc data available to us that were collected in and around the lagoon. Appendix 1 indicates which program collected the samples, the date of sample collection, and the sample source. The sample source indicates what type of waterbody the sample was collected in. Sample sources included drainage ditches, mudflat areas, tidal creeks and marshes, and receiving waters. Additionally, Appendix 1 outlines which dissolved zinc data were used to conduct the 303(d) listing analysis as well as the reasoning for why certain samples were not used.

Table 1 presents a summary of dissolved zinc data collected within the lagoon. The data presented in Table 1 do not show any exceedances in Mugu Lagoon of the dissolved zinc criteria. Regardless of when or where the data were collected, none of the available data exceedance the CTR criterion for zinc. As such, the data does not support a zinc listing in the lagoon and therefore the listing should be removed from the 2006 303(d) list.

n	Range	Median <sup>[1]</sup>	Criterion	# of	%
	(ug/L)	(ug/L)	(ug/L)	Exceedances	Exceedance
59	1.17-31	5.82	81	0	0

## Table 1. Dissolved Zinc Data Summary for CCW Reach 1 (Mugu Lagoon)

#### Nickel Water Column Listing

Appendix 2 presents a table listing all of the dissolved nickel data available to us that were collected in and around the lagoon. Appendix 2 provides the same information as discussed above for Appendix 1.

Table 2 presents a summary of dissolved nickel data collected within the lagoon. The data presented in Table 2 show three exceedances in Mugu Lagoon of the dissolved nickel criteria out of a sample size of 49. Per Table 4.1 of the listing guidance, the maximum number of measured

exceedances allowed to remove a water segment from the section 303(d) list for toxicants with a sample size of 49 is four. As such, the data does not support a nickel listing in the lagoon and therefore the listing should be removed from the 2006 303(d) list. Additionally, please note the data available for the 1994, 1998, and 2002 listings would not have supported a listing as well.

n	Range	Median <sup>[1]</sup>	Criterion	# of	%
	(ug/L)	(ug/L)	(ug/L)	Exceedances	Exceedance
49	<6.8*-13.78	2.65	8.3	3	. 6%

\* < Represents a non-detect at a detection limit of 6.8 ug/L

Thank you for your consideration of these comments. If you have any questions, please feel free to contact me at (310) 394-1036.

Yours truly,

Chris Minton Project Scientist

Larry Walker Associates 429 Santa Monica Blvd, Suite 270 Santa Monica, CA 90401 chrism@lwa.com

Subject:	Fwd: Mugu Zinc Delist

Jessie,

Please incorporate these recommendations into our fact sheets and decisions. Thanks.

#### Cra-ibay

>>> Samuel Unger Wednesday, June 07, 2006 >>> Craig - Thanks a lot. Here is RB staff's analysis of the LWA letter and its analysis regarding the subject potential delist:

Here are staffs responses to LWAs letter concerning the delisting of zinc and nickel in Reach 1 (Mugu Lagoon) on behalf of the Calleguas Creek Watershed Management Plan.

LWAs letter is based on an analysis of the data sets for nickel and zinc in Mugu Lagoon and its vicinity. LWA categorized the data set by sample location: either in Mugu Lagoon, in drainages leading to Mugu Lagoon or uncertain location. Of particular note is the categorization of data collected by the US Navy. The Navy monitored sites both within the Lagoon and in drainages which fed into the Lagoon. The objective of the Navy sampling was to separate pollutants which may be due to Naval Base activities, or due to runoff originating outside the Naval Base.

#### Zinc.

We concur with LWA, in that there are sufficient data to support the delisting of zinc in Mugu Lagoon. Regardless of whether all the data are used, or just a portion of the data, the number of exceedances is still 0. At no point did the result ever exceed CTR chronic criteria for the dissolved fraction (81 ug/L). According to delisting criteria (Table 4.1 for toxicants) in "Water Quality Control Policy for developing Californias Clean Water Act Section 303(d) List" (Adopted Sept 2004), the number of exceedances met the delisting standard. The following represents a summary of the data:

Table 1 (from Chris' letter):

Dissolved Zinc

n=59, # of exceedances (based on chronic criteria for saltwater CTR)=0

Delist if the number of exceedances is equal to or less than 4 (for sample size 48-59)

#### Nickel

From the tables provided in LWAs letter, there were 61 sampling points deleted; of the 61 points, 35 were clearly designated as part of other Reaches outside Mugu Lagoon, while 26 were uncertain, or in areas of the Naval Base, which feed into Mugu Lagoon. The following reasons were given for deleting the 26 uncertain points:

1. (9 points) ...this sample was collected to characterize discharges to the lagoon and not the lagoon itself.

2. (6 ponits) Map 1 suggests this site corresponding to drainage ditch (No 7,6,5,4,3)

3. (6 points) It is not clear on Map 1 which discharges these sites correspond to.

4. (1 point) Map 1 suggests this site corresponds to a drainage ditch in the upper northwestern portion of the Base

5. (2 points) Map 1 suggests these sites correspond to drainage ditches off the Base, possibly Oxnard Drain No.2

6. (1 point) Map 1 suggests this site corresponds to a drainage ditch off the Base.

7. (1 point) ....this sampling location was established to characterize discharges to the lagoon and not the lagoon itself.

Adding these uncertain observations into the analysis changes the outcome. A summary of the resultant data set is:

n=75, # of exceedances=7.

According to Water Quality Control Policy, it is not recommended to delist nickel because the policy states that a delist is appropriate if the number of exceedances is equal to or less than 6 for sample size 72-82.

In addition, Reaches 2 and 4 (Calleguas Creek and Revolon Slough), which feed directly into Mugu Lagoon are heavily impaired: 47% and 42% of detected samples exceeded CTR saltwater chronic criteriasee pgs 30-31, Tables 11 and 13, of staff report. Due to their proximity to Mugu Lagoon, as well as the uncertainty in LWA's analysis, we recommend not delisting nickel. According to Water Quality Control Policy, it is not recommended to delist nickel.

Because it is uncertain whether these sampling locations are clearly outside of Mugu Lagoon and because inclusion of these 26 points alter the conclusions of the analysis for nickel, Regional Board staff recommends keeping these observations in the data set at this time.

10604

From: Jessie Maxfield To: Craig J. Wilson Date: 6/2/2006 4:10:57 PM Subject: **Calleguas Creek Zinc** 

I found the letter with the data from Larry Walker and Associates on this (Letter ID # 77) from Chris Minton and there is no hardness data included. In his summary he says none of the samples exceed the CTR so I don't know if he figured this out using the hardness data and just didn't present the hardness numbers or what. I left him a message asking him to contact you or Dorena and let us know how he came to that conclusion or if her could sent the hardness info over for the samples he included in attachment 1 of his letter so we can verify for ourselves that there is not a problem. There is also info. in here on dissolved nickel. I don't know if you wanted this to be addressed as well. Since these are related to old listings, these comments were put in the response category 98.1. I suppose there could be others that have fallen into this category which might need further review but I think we were acting under the assumption that if there was no factsheet for it this go around we weren't making any changes. I guess this is an exception since the RWQCB specifically requested this.

Larry called Jessie later that day she made necessary changes in FAC + comments databases towever what about nickel data.

## Subject: Supplementary Comments on Draft 2006 303(d) list

#### Dear Mr. Wilson:

The members of the Calleguas Creek Watershed Management Plan (CCWMP) have asked Larry Walker Associates to provide additional information to further support comments presented in the January 18, 2006 letter signed by CCWMP Chair Judy Mikels. This letter provides supplementary information for comments provided in the original letter on zinc and nickel listed in Reach 1 of the Calleguas Creek watershed (CCW).

We are requesting your consideration of this information because we were only recently able to accurately identify where the samples that were used in the original listings were collected and because a TMDL is currently required to be completed for these constituents by a Consent Decree this year.

# Background

The original recommendations for listings for total nickel and total zinc in Calleguas Creek Reach 1 (Mugu Lagoon) were presented in the LA Regional Water Quality Control Board's 1996 Water Quality Assessment and Documentation. However, a review of the available data does not suggest there are impairments.

A review of the available information revealed how US Navy sampling locations were utilized in 1994 and 1999 to characterize Reach 1. The review led to an understanding that not all of the samples collected by the Navy were intended to characterize the lagoon. Rather, the great majority of the samples collected by the Navy in 1994 and subsequent years were intended to investigate the sources of pollutants to the lagoon. The transport mechanism for many of these sources being through a network of drainage ditches on the Navy base partially displayed in Figures 1 and 2.

Subsequent to the listings, dissolved zinc and nickel data were collected through two monitoring programs in addition to the Navy. These programs were the Calleguas Creek Characterization Study (CCCS, 1998-1999) and the Calleguas Creek Watershed Metals Total Maximum Daily Load Monitoring Program (CCTMDL, 2003-2004).

# **Process for Determining Data to Use in Analysis**

Two steps were taken to determine which data were appropriate for consideration in the 303(d) analysis. The first was to identify any non-detected data with detection limits exceeding the corresponding CTR criteria. Non-detected data with detection limits exceeding the corresponding CTR criteria were not used in the 303(d) listing analysis per section 6.1.5.5 of the Water Quality Control Policy for Developing California's Clean Water Act Section 303(d) List (Listing Policy). These data were not used because one would not be able to ascertain whether the concentration in the sample exceeded the criteria or not. As such, it would be inappropriate to use these data to evaluate impairments to beneficial uses.

The second step was to identify data collected within what could be considered the receiving waters of Reach 1 Mugu Lagoon. Samples collected in Reach 1 to characterize the lagoon were retained for the 303(d) listing analysis. Samples collected near Reach 1 to characterize sources of contamination to the lagoon were not considered. This approach is similar to other 303(d) listing analysis where only data collected within the receiving water portion of the reach is considered and land use discharge data are not. Samples collected for the purpose of characterizing sources of contamination to the lagoon could be considered for use in listing the specific drainage ditches as has been done with Oxnard Drains No. 2 and No. 3.

Sampling locations and what the corresponding data characterize for the Calleguas Creek Characterization Study, TMDL Monitoring Program, and the Navy after 1999 are relatively well known. However, for data collected by the Navy between 1994 and 1999 it is not as clear which sampling locations corresponded to sites that characterized the lagoon or characterized sources of contamination to the lagoon.

The following two reports completed for the Navy provided information regarding sample collection locations and whether the locations provided information on receiving waters or discharge data:

- Draft Final Phase I Remedial Investigation (Phase 1 RI) Technical Memorandum for Naval Air Weapons Station Point Mugu, California (Tetra Tech, 1998)
- Draft Remedial Investigation for Groundwater (GW RI) Report Naval Base Ventura County Point Mugu Site, California (Tetra Tech, 2001)

The Phase 1 RI and GW RI provide narrative descriptions of what each sampling location was intended to characterize in 1994 and 1999, respectively. These two reports were used to determine which samples would be used based on whether they would have characterized the lagoon or sources of contamination to the lagoon. The Phase 1 RI discusses water sampling conducted in 1994 in section 8.4 (pg 8-4 through 8-7) and section 12.4 (pg 12-6 through 12-11). The GW RI discusses water sampling conducted in 1999 in section 4.4.3 (pg 4-15 through 4-16). Maps 1 and 2 display sampling locations used in 1994 and 1999, respectively. These maps were not relied upon to determine whether a sampling location would characterize the lagoon or

sources of contamination to the lagoon because of potential issues associated with GIS coordinates used for identifying locations and land features such as drains.

It is important to consider the intended purpose of sampling locations as described in the Phase 1 RI and the GW RI because they offer insight into whether each given sample was collected with the intent of representing receiving water or discharges to receiving waters. The intended purpose allows insight into the condition at the sampling location during the time of sample collection.

# Results

## Zinc Water Column Listing

Appendix 1 presents a table listing all of the dissolved zinc data available to us that were collected in and around the lagoon. Appendix 1 indicates which program collected the samples, the date of sample collection, and the sample source. The sample source indicates what type of waterbody the sample was collected in. Sample sources included drainage ditches, mudflat areas, tidal creeks and marshes, and receiving waters. Additionally, Appendix 1 outlines which dissolved zinc data were used to conduct the 303(d) listing analysis as well as the reasoning for why certain samples were not used.

Table 1 presents a summary of dissolved zinc data collected within the lagoon. The data presented in Table 1 do not show any exceedances in Mugu Lagoon of the dissolved zinc criteria. Regardless of when or where the data were collected, none of the available data exceedance the CTR criterion for zinc. As such, the data does not support a zinc listing in the lagoon and therefore the listing should be removed from the 2006 303(d) list.

Table 1. Dissurved Zhic Data Summary for CC w Reach 1 Uviugu Lagool	Table	1.	Dissolved	Zinc ]	Data	Summary fo	or C	CW	Reac	<b>h</b> 1	1 (1	Mugu	Lagoor

59	1.17-31	5.82	81	0	0

## Nickel Water Column Listing

Appendix 2 presents a table listing all of the dissolved nickel data available to us that were collected in and around the lagoon. Appendix 2 provides the same information as discussed above for Appendix 1.

Table 2 presents a summary of dissolved nickel data collected within the lagoon. The data presented in Table 2 show three exceedances in Mugu Lagoon of the dissolved nickel criteria out of a sample size of 49. Per Table 4.1 of the listing guidance, the maximum number of measured

exceedances allowed to remove a water segment from the section 303(d) list for toxicants with a sample size of 49 is four. As such, the data does not support a nickel listing in the lagoon and therefore the listing should be removed from the 2006 303(d) list. Additionally, please note the data available for the 1994, 1998, and 2002 listings would not have supported a listing as well.

## Table 2. Dissolved Nickel Data Summary for CCW Reach 1 (Mugu Lagoon)

n .	Range	Median <sup>[1]</sup>	Criterion	# of	%
	(ug/L)	(ug/L)	(ug/L)	Exceedances	Exceedance
49	<6.8*-13.78	2.65	8.3	3	6%

\* < Represents a non-detect at a detection limit of 6.8 ug/L

Thank you for your consideration of these comments. If you have any questions, please feel free to contact me at (310) 394-1036.

Yours truly,

Chris Minton Project Scientist

The Phase 1 RI (pg 12-6) identifies these sampling locations as being either a drainage ditch, storm sewer, or sewage treatment plant outfall indicating they were established to characterize discharges to the lagoon and not the lagoon itself. Map 1 suggests these sites correspond to drainage ditch No. 5.

Reach	Monitoring Type	Project SitelD	Sample Source	Sample Date	Sign	Result (ug/L)	Used in Analysis	Reason for Exclusion
NA	Navy	SW11-4	Drainage Ditch	1/31/94	<	1.5	No	The Phase 1 RI (pg 12-6) identifies this sampling location as being either a drainage ditch, storm sewer, or sewage treatment plant outfall indicating it was established to characterize discharges to the lagoon and not the lagoon itself. Map 1 shows this site may correspond to Oxnard Drain No. 3.
NA	Navy	SW11-32	Drainage Ditch	2/2/94	<	13.3	No	The Phase 1 RI (pg 12-7) identifies this sampling location as being a small drainage channel indicating it was established to characterize discharges to the lagoon and not the lagoon itself. Map 1 suggests this site corresponds to a drainage ditch off of the Navy base.
NA	Navy	SW11-7	Drainage Ditch	1/29/94	<	1.5	No	
NA	Navy	SW11-27	Drainage Ditch	1/31/94	<	1.5	No	The Phase 1 RI (pg 12-6) identifies these sampling locations as
· NA	Navy	SW11-29	Drainage Ditch	1/31/94	<	1.5	No	being either a drainage ditch, storm sewer, or sewage treatment
NA	Navy	SW11-37	Drainage Ditch	1/29/94	<	1.5	No	plant outfall indicating they were established to characterize
NA	Navy	SW11-6	Drainage Ditch	1/31/94	<	1.5	No	discharges to the lagoon and not the lagoon itself. It is not clear on
NA	Navy	SW11-8	Drainage Ditch	1/31/94	<	1.5	No	Map 1 which discharges these sites corresponds to.
NA	Navy	SW11-9	Drainage Ditch	2/2/94	<	13.3	No	
NA	Navy	SW11-28	Drainage Ditch	2/3/94	<	3.3	No	The Phase 1 RI (pg 12-7) identifies this sampling location as a small drainage channel indicating it was established to characterize discharges to the lagoon and not the lagoon itself. Map 1 suggests this site corresponding to drainage ditch No. 7.
NA	Navy	SW11-30	Drainage Ditch	2/3/94	<	18.4	No	The Phase 1 RI (pg 12-7) identifies this sampling location as a small drainage channel indicating it was established to characterize discharges to the lagoon and not the lagoon itself. Map 1 suggests this site corresponds to drainage ditch No. 6.
NA	Navy	SW11-33	Drainage Ditch	, 2/4/94	₹	24.4	No	The Phase 1 RI (pg 12-7) identifies this sampling location as being a small drainage channel indicating it was established to characterize discharges to the lagoon and not the lagoon itself. Map 1 suggests this site corresponds to a drainage ditch in the upper northwestern portion of the base.
NA	Navy	SW11-34	Drainage Ditch	1/29/94	=	36	No	The Phase 1 RI (pg 12-7) identifies these sampling locations as
NA	Navy	SW11-35	Drainage Ditch	2/4/94	<	20	No	being in small drainage channels indicating they were established to

NA	Navy	SW5-2	Drainage Ditch	1/28/94	<	6.8	No	
NA	Navy	SW5-2	Drainage Ditch	2/3/94	<	5	No	
NA	Navy	SW11-28	Drainage Ditch	2/3/94	=	7.8	No	The Phase 1 RI (pg 12-7) identifies this sampling location as a small drainage channel indicating it was established to characterize discharges to the lagoon and not the lagoon itself. Map 1 suggests this site corresponding to drainage ditch No. 7.
NA	Navy	SW11-30	Drainage Ditch	2/3/94	<b>v</b> , ,	5.6	No	The Phase 1 RI (pg 12-7) identifies this sampling location as a small drainage channel indicating it was established to characterize discharges to the lagoon and not the lagoon itself. Map 1 suggests this site corresponds to drainage ditch No. 6.
NA	Navy	SW11-1	Drainage Ditch	1/25/94	<	7.7	No	The Phase 1 RI (pg 12-6) identifies this sampling location as being either a drainage ditch, storm sewer, or sewage treatment plant outfall indicating it was established to characterize discharges to the lagoon and not the lagoon itself. Map 1 suggests this site corresponds to drainage ditch No. 4.
NA	Navy	SW11-3	Drainage Ditch	1/25/94	<	7.4	No	The Phase 1 RI (pg 12-6) identifies these sampling locations as being either a drainage ditch, storm sewer, or sewage treatment
NA	Navy	SW11-2	Drainage Ditch	1/25/94	<	6.8	No	discharges to the lagoon and not the lagoon itself. Map 1 suggests these sites correspond to drainage ditch No. 5.
NA	Navy	SW11-4	Drainage Ditch	1/31/94	<	6.8	No	The Phase 1 RI (pg 12-6) identifies this sampling locations as being either a drainage ditch, storm sewer, or sewage treatment plant outfall indicating it was established to characterize discharges to the lagoon and not the lagoon itself. Map 1 shows this site may correspond to Oxnard Drain No. 3.

Reach	Monitoring Type	Project SitelD	Sample Source	Sample Date	Sign	Result (ug/L)	Used in Analysis	Reason for Exclusion
NA	Navy	SW11-37	Drainage Ditch	1/29/94	<	6.8	No	The Dhase 1 BL (ng 12 6) identifies these compling locations as
NA	Navy	SW11-8	Drainage Ditch	1/31/94	<	6.8	No	being either a drainage ditch storm sewer, or sewage treatment
NA	Navy	SW11-29	Drainage Ditch	1/31/94	=	7.3	<u>No</u>	plant outfall indicating they were established to characterize
NA	Navy	SW11-27	Drainage Ditch	1/31/94	=	, <b>8.8</b>	<u>No</u>	discharges to the lagoon and not the lagoon itself. It is not clear on
NA	Navy	SW11-6	Drainage Ditch	1/31/94	=	10.9	<u>No</u>	Map 1 which discharges these sites corresponds to.
NA	Navy	SW11-9	Drainage Ditch	2/2/94	<	5	No	
NA	Navy	SW11-33	Drainage Ditch	2/4/94	۷	6.7	No	The Phase 1 RI (pg 12-7) identifies this sampling location as being a small drainage channel indicating it was established to characterize discharges to the lagoon and not the lagoon itself. Map 1 suggests this site corresponds to a drainage ditch in the upper northwestern portion of the base.
NA	Navy	SW11-35	Drainage Ditch	2/4/94	=	5.6	No	The Phase 1 RI (pg 12-7) identifies these sampling locations as being in small drainage channels indicating they were established to
NA	Navy	SW11-34	Drainage Ditch	1/29/94	· <	5	No	1 suggests these sites correspond to drainage ditches off of the Navy base, possibly Oxnard Drain No. 2.
NA	Navy	SW11-32	Drainage Ditch	2/2/94	<	5	No	The Phase 1 RI (pg 12-7) identifies this sampling location as being a small drainage channel indicating it was established to characterize discharges to the lagoon and not the lagoon itself. Map 1 suggests this site corresponds to a drainage ditch off of the Navy base.
NA	Navy	SW6-1	Drainage Ditch	1/25/94	<	6.8	No	The Phase 1 RI (pg 9-3) identifies this sampling location as being used to characterize water that flows along a shallow swale to South Mugu Road and to a storm sewer that ultimately discharges to drainage ditch No. 6 indicating this sampling location was established to characterize discharges to the lagoon and not the lagoon itself.
