Triggering Water Quality Objective for Delisting

The Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties, 1994 contains water quality criteria for waterbodies in the Los Angeles Region. The most conservative applicable water quality criterion for enterococcus is 35 MPN/100mL for the Basin Plan REC1 Marine 30-Day Minimum 5 samples objective. In Point Fermin Park Beach, the criterion was exceeded in 0 of 78 samples, which is 0% of the sample events. Under the state's listing policy, a waterbody is eligible for delisting for enterococcus if there are 12 or fewer exceedances out of the 78 samples.

Triggering Water Quality Objective for Listing

The Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties, 1994 contains water quality criteria for waterbodies in the Los Angeles Region. The most conservative applicable water quality criterion for total coliform is 70 MPN/100mL for the Basin Plan SHELL 30-Day Median objective. In Point Fermin Park Beach, the criterion was exceeded in 104 of 458 samples, which is 22.7% of the sample events. Under the state's listing policy, a waterbody is considered to be impaired for total coliform if there are 76 or more exceedances out of the 458 samples.

Triggering Water Quality Objective for Delisting

Not eligible for delisting.

Triggering Water Quality Objective for Delisting

The Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties, 1994 contains water quality criteria for waterbodies in the Los Angeles Region. The most conservative applicable water quality criterion for fecal coliform is 200 MPN/100mL for the Basin Plan REC1 Marine 30-Day Minimum 5 samples objective. In Point Fermin Park Beach, the criterion was exceeded in 0 of 134 samples, which is 0% of the sample events. Under the state's listing policy, a waterbody is eligible for delisting for fecal coliform if there are 22 or fewer exceedances out of the 134 samples.

No objectives were exceeded.

Triggering Water Quality Objective for Delisting

The contains water quality criteria for waterbodies in California. The most conservative applicable water quality criterion for pahs (total) is 1800 µg/g for the objective. In Santa Monica Bay Offshore/Nearshore, the criterion was exceeded in 0 of 269 samples, which is 0% of the sample events. Under the state's listing policy, a waterbody is eligible for delisting for pahs (total) if there are 22 or fewer exceedances out of the 269 samples.

No objectives were exceeded.

Triggering Water Quality Objective for Delisting
The Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties, 1994 contains water quality criteria for waterbodies in the Los Angeles Region. The most conservative applicable water quality criterion for fecal coliform is 200 MPN/100mL for the Basin Plan REC1 Marine 30-Day Minimum 5 samples objective. In Santa Monica Beach, the criterion was exceeded in 3 of 2648 samples, which is 0.1% of the sample events. Under the state's listing policy, a waterbody is eligible for delisting for fecal coliform if there are 439 or fewer exceedances out of the 2648 samples.

Triggering Water Quality Objective for Listing

The Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties, 1994 contains water quality criteria for waterbodies in the Los Angeles Region. The most conservative applicable water quality criterion for total coliform is 70 MPN/100mL for the Basin Plan SHELL 30-Day Median objective. In Santa Monica Beach, the criterion was exceeded in 1199 of 2570 samples, which is 46.6% of the sample events. Under the state's listing policy, a waterbody is considered to be impaired for total coliform if there are 427 or more exceedances out of the 2570 samples.

Triggering Water Quality Objective for Delisting

Not eligible for delisting.

Triggering Water Quality Objective for Delisting

The Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties, 1994 contains water quality criteria for waterbodies in the Los Angeles Region. The most conservative applicable water quality criterion for enterococcus is 35 MPN/100mL for the Basin Plan REC1 Marine 30-Day Minimum 5 samples objective. In Venice Beach, the criterion was exceeded in 174 of 1081 samples, which is 16.1% of the sample events. Under the state's listing policy, a waterbody is eligible for delisting for enterococcus if there are 179 or fewer exceedances out of the 1081 samples.

Triggering Water Quality Objective for Delisting

The Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties, 1994 contains water quality criteria for waterbodies in the Los Angeles Region. The most conservative applicable water quality criterion for fecal coliform is 200 MPN/100mL for the Basin Plan REC1 Marine 30-Day Minimum 5 samples objective. In Venice Beach, the criterion was exceeded in 1 of 1701 samples, which is 0.1% of the sample events. Under the state's listing policy, a waterbody is eligible for delisting for fecal coliform if there are 282 or fewer exceedances out of the 1701 samples.
