Triggering Water Quality Objective for Listing

The Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties, 1994 contains water quality criteria for waterbodies in the Los Angeles Region. The most conservative applicable water quality criterion for fecal coliform is 200 MPN/100mL for the Basin Plan REC1 Freshwater 30-Day Minimum 5 samples objective. In Los Angeles River Reach 6 (Above Sepulveda Flood Control Basin), the criterion was exceeded in 254 of 258 samples, which is 98.4% of the sample events. Under the state's listing policy, a waterbody is considered to be impaired for fecal coliform if there are 43 or more exceedances out of the 258 samples.

Triggering Water Quality Objective for Listing

The Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties, 1994 contains water quality criteria for waterbodies in the Los Angeles Region. The most conservative applicable water quality criterion for enterococcus is 35 MPN/100mL for the Basin Plan REC1 Marine 30-Day Minimum 5 samples objective. In Marina del Rey Harbor - Back Basins, the criterion was exceeded in 419 of 1514 samples, which is 27.7% of the sample events. Under the state's listing policy, a waterbody is considered to be impaired for enterococcus if there are 252 or more exceedances out of the 1514 samples.

Triggering Water Quality Objective for Delisting

Not eligible for delisting.

Triggering Water Quality Objective for Listing

The Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties, 1994 contains water quality criteria for waterbodies in the Los Angeles Region. The most conservative applicable water quality criterion for fecal coliform is 200 MPN/100mL for the Basin Plan REC1 Marine 30-Day Minimum 5 samples objective. In Marina del Rey Harbor - Back Basins, the criterion was exceeded in 330 of 1520 samples, which is 21.7% of the sample events. Under the state's listing policy, a waterbody is considered to be impaired for fecal coliform if there are 253 or more exceedances out of the 1520 samples.

Triggering Water Quality Objective for Delisting

Not eligible for delisting.

Triggering Water Quality Objective for Listing

The Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties, 1994 contains water quality criteria for waterbodies in the Los Angeles Region. The most conservative applicable water quality criterion for total coliform is 70 MPN/100mL for the Basin Plan SHELL 30-Day Median objective. In Marina del Rey Harbor - Back Basins, the criterion was exceeded in 997 of 1520 samples, which is 65.6% of the sample events. Under the state's listing policy, a waterbody is considered to be impaired for total coliform if there are 253 or more exceedances out of the 1520 samples.

Triggering Water Quality Objective for Delisting

Not eligible for delisting.

Triggering Water Quality Objective for Listing

The Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties, 1994 contains water quality criteria for waterbodies in the Los Angeles Region. The most conservative applicable water quality criterion for enterococcus is 35 MPN/100mL for the Basin Plan REC1 Marine 30-Day Minimum 5 samples objective. In Marina del Rey Harbor Beach, the criterion was exceeded in 396 of 938 samples, which is 42.2% of the sample events. Under the state's listing policy, a waterbody is considered to be impaired for enterococcus if there are 156 or more exceedances out of the 938 samples.

Triggering Water Quality Objective for Delisting

Not eligible for delisting.

Triggering Water Quality Objective for Delisting

The Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties, 1994 contains water quality criteria for waterbodies in the Los Angeles Region. The most conservative applicable water quality criterion for fecal coliform is 200 MPN/100mL for the Basin Plan REC1 Marine 30-Day Minimum 5 samples objective. In Marina del Rey Harbor Beach, the criterion was exceeded in 172 of 1612 samples, which is 10.7% of the sample events. Under the state's listing policy, a waterbody is eligible for delisting for fecal coliform if there are 267 or fewer exceedances out of the 1612 samples.

Triggering Water Quality Objective for Delisting

The Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties, 1994 contains water quality criteria for waterbodies in the Los Angeles Region. The most conservative applicable water quality criterion for total coliform is 1000 MPN/100mL for the Basin Plan REC1 Marine Ratio Single sample objective. In Marina del Rey Harbor Beach, the criterion was exceeded in 253 of 1585 samples, which is 16% of the sample events. Under the state's listing policy, a waterbody is eligible for delisting for total coliform if there are 263 or fewer exceedances out of the 1585 samples.
