SUBJECT: TIMBER HARVESTING PLAN 1-06-080 SCR

Dear Sir:

The Davenport County Sanitation District (District) provides drinking water to the town of Davenport. Our drinking water source is primarily surface water from San Vicente Creek. In the past few years turbidity of our water source has become a serious problem during the rainy season and we have had to stop production of water for days at a time. The community has been put on a boil water notice and we provided bottled water for the community during the past winter for drinking and cooking because of the turbidity issues.

We sent a letter to you last fall regarding this same timber harvest application stating that because of the proximity of the timber harvest to San Vicente creek we had serious concerns about erosion and soil stability during the winter months that could occur due to timber harvest operations. After the preharvest inspection in January 2006, we continue to have the opinion that with the current problems we have to provide treated water to the community in the rainy season, this project has the potential to cause additional erosion into the watershed during winter operations.

We request that the timber harvest area not be allowed to be disturbed between October 15<sup>th</sup> and May 1<sup>st</sup> and that all disturbed areas be treated with erosion control and seeded prior to October 15<sup>th</sup>. Please contact Sanitation Engineer, Rachel Lather-Hidalgo at (831) 454-2637 if you have any questions regarding the contents of this letter.

Yours truly,

THOMAS L. BOLICH  
District Engineer

**OFFICIAL NOTICE OF FILING OF A TIMBER HARVESTING PLAN,  
NON-INDUSTRIAL TIMBER MANAGEMENT PLAN OR  
MAJOR AMENDMENT  
DATE: May 25, 2006**

818

You are invited to submit comments and concerns for consideration in the review process. Submit written comments complete with the plan or amendment number clearly identified, and include your name and mailing address to the address listed immediately below\*. Letters must be received in our office by the close of comment date shown. Please be aware that the date provided is the earliest possible closing date for public comments. This date generally changes throughout the review process, and opportunity to submit comments may still be available after the date shown. You may contact the Department for the most current deadline at: North Coast Region Headquarters, Attn: Forest Practice, 135 Ridgway Avenue, Santa Rosa, CA, 95401, (707) 576-2959, e-mail: [santarosapubliccomment@fire.ca.gov](mailto:santarosapubliccomment@fire.ca.gov)

**IF A PUBLIC HEARING IS SCHEDULED FOR THIS PROPOSED TIMBER HARVEST OPERATION, YOU WILL BE NOTIFIED OF THE HEARING BY MAIL. FOR INFORMATION REGARDING THE TIME, DATE, AND LOCATION OF THE REVIEW TEAM MEETING, CONTACT THE CDF FELTON OFFICE, 6059 HIGHWAY 9, FELTON, CA 95018 (831) 335-6740.**

This notice is posted in compliance with Section 1037.1 of Title 14 of the California Code of Regulations.

SUBJECT: WINTER RAW WATER SUPPLY

Dear Mr. *Satish*

As you know, the Davenport County Sanitation District was under a boil water order last winter and we anticipate that it will occur again this coming winter. The order is the result of the high sediment content of the raw water at that time of year and the inability of the District's water treatment plant to treat the water during stormy weather periods to sufficient standards that are set by the California Department of Health Services.

In anticipation of the upcoming rainy season, District staff met with Ken Kannegaard of your staff to discuss possible solutions toward helping the District achieve the best possible quality of water for the residents of Davenport. As a result of that discussion, we understand that Cemex will consider the following changes:

1. Remove the sediment from behind San Vicente dam and install a self-cleaning cyclone separator to remove fine silt and particles.
2. Install proper blow-off valves instead of the existing ball valves so that constant and proper operation is assured for both Cemex and the District.
3. Reconfigure the Mill Creek inlet line so that it bypasses the sand trap to directly feed your supply pond. In this configuration, it could also be used by the District if the San Vicente line becomes inoperative. This new configuration would significantly reduce the raw water volume and resultant velocity so that some degree of settling would be achieved.

These changes would help the District and the residents of Davenport achieve a stable water supply this winter. Last winter, due to turbidity issues, there were many days the treatment plant was shut down and unable to produce any water at all.

MR. SATISH SHETH

We would appreciate a written response to this request so that we can better plan for this coming winter. If you have any questions regarding these requests and proposed changes, please feel free to contact me or Brian Turpen at (831) 454-2160.

SUBJECT: DAVENPORT DRINKING WATER: BOIL ORDER RELEASE

Dear Water Customer:

In May of last year, you received a "Boil Water Notice" that advised you to boil your water before using. The reason for the notice was a combination of new state treatment standards for drinking water and the fact that during winter storms, due to the excessive turbidity of our surface water source (San Vicente Creek), the water treatment plant is often unable to produce adequate amounts of potable water.

Environmental Health, in conjunction with Public Works, has determined that it is now feasible to suspend the boil water notice provisions during portions of the year, if interim treatment guidelines can be met. Now that winter storms appear to be over, the treatment plant has been able to achieve compliance with these interim treatment guidelines for a period in excess of two weeks. Because of this, you are now advised that you no longer are required to boil your water. When the next winter storm season begins, you can expect that the boil water notice will be re-issued.

The State of California Department of Health Services (DHS) sets drinking water standards and has determined the presence of microbiological contaminants are a health concern at certain levels of exposure. If water is inadequately treated, microbiological contaminants in that water may cause disease. Disease symptoms may include diarrhea, cramps, nausea, and possibly jaundice, and any associated headaches and fatigue. These symptoms, however are not just associated with disease-causing organisms in drinking water, but also may be caused by a number of factors other than your drinking water. DHS has set enforceable requirements for treating drinking water to reduce the risk of these adverse health effects. Treatment such as filtering and disinfecting the water removes or destroys microbiological contaminants. Drinking water which is treated to meet DHS requirements is associated with little to none of this risk and should be considered safe. Although the boil water requirement has been lifted, you should understand that the existing treatment plant must be upgraded and currently does not meet approved treatment technology requirements for the treatment of surface water sources. You still have the option of continuing to boil your water or to purchase bottled water if you choose.

Public Works, in cooperation with County Environmental Health and with the help of Supervisor Wormhoudt's office, continues to aggressively pursue grants and loans for the construction of a new water treatment facility and will keep you informed as that process proceeds in future mailings and meetings.

Yours truly,

THOMAS L. BOLICH  
District Engineer
