

RESPONSE TO COMMENT RECEIVED FROM
SACRAMENTO COUNTY REGARDING
DEL PASO EXPLORATION CLAIM 18618

Comment 1: TPHg contamination in groundwater detected at concentration of 2,200 µg/L needs to be defined to the south of the property before satisfying the Low Threat Closure Policy.

RESPONSE: The predominant groundwater flow direction at this site is westerly. The only concentration reported in the most recent monitoring report is 280 µg/L TPHg in downgradient monitoring well MW-2. The plume was projected to be less than 1,000 feet long and meets Groundwater Specific Criteria, Class 4.
