**3. PROJECT DESCRIPTION (Provide a detailed description of your project, including, but not limited to, type of construction activity, area to be graded or excavated, and how the water will be used.) Add additional pages if needed and check box below and label as an attachment.**

The Project will involve capture of flows from the hard armored portions of Temescal Creek in the City of Corona in western Riverside County. The Project will divert wet weather storm flows to groundwater infiltration basins owned and operated by the City of Corona. The City will use the storm flows to recharge the groundwater basin and store the water for municipal supply. The Project will not divert baseflow in the creek. Only flows between 7 cfs and 40 cfs will be diverted. The Project will reduce the City's reliance on imported water and alleviate drought conditions in the City. The Project will likewise maximize use of local supplies and reduce costs and impacts related to transporting water large distances. Additional information is included in Attachment 1.
