

Table 4-1. Responses to Comments

Ltr#	Cmt#	Comment	Response
1900	1	Build more dams.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1901	1	Water is so critical for agriculture. We need to preserve it.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1902	1	We need more dams. We're getting more and more people. We're all going to go thirsty. Also, we need to update our dams that are too old, such as Oroville.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1903	1	I live in a rural farming community and am a member of an agribusiness committee. I would love to see us find ways to store and save the water that we have been blessed with this winter.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1904	1	Let's end this madness and get back to the reasons these reservoirs were built in the first place. Seems insanity at the top is the norm these days. What has happened to rational thinking? When people complain agriculture takes so much water, let them do it without clean cheap food in their mouth. Do they want food to become a weapon held against us as we would need to import it? How about the inputs of producing it? What kinds of heavy metals, etc.?	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1905	1	The threat to Delta Smelt comes from the non-indigenous Striped Bass and the untreated sewage from Stockton and Sacramento. Taking our water won't fix these problems.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1906	1	We give enough of our water away. We need to save our valley and all of our water. This is crazy just like the train!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1907	1	People also need water to survive.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1908	1	Stop taking the water we need and sending it done south, where they think if they can pay for it then it's okay to waste it. I have family that lives down south and every time I go to see them I can point out at least one house that is letting water run down the gutter or overwatering their grass. Let conservation start down south before you take the water we need. If you cut the water the farmers get to grow food with, there will be food shortages. Farmers need water to grow our food. ONE MORE QUESTION: WHAT DID THE FISH DO IN DROUGHT BEFORE WE BUILT DAMS? They have not gone extinct yet.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1909	1	The Central Valley has been through enough with the drought and you want to take what we have left? How do you sleep at night?	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1910	1	Build more dams.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1911	1	Diverting surface water only takes more groundwater.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1912	1	Take our water and you take our jobs and food off tables all over the world!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1913	1	Let the farmers continue to produce food for the American citizens!	Please see Master Response 1.1, General Comments for responses to comments that either make a general

Table 4-1. Responses to Comments

Ltr#	Cmt#	Comment	Response
			comment on the plan amendments or do not raise significant environmental issues.
1914	1	The Twin Tunnels Project will only result in severe economic and environmental consequences for residents, local businesses, and family-owned farms in the East Bay Area and San Joaquin Valley. Diverting water to regions owned by large agricultural corporations, who in turn export water-intensive crops overseas, comes at the cost of Delta agriculture that supports our communities. Reducing the water flows on the San Joaquin River will cause an increase in the toxic algae blooms that have been ravaging the South Central Delta since 2016. As a result, the health concerns caused by the algae have limited recreational activity on the delta, and thus lowered property values. Please do the right thing and oppose these tunnels.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1915	1	We absolutely need more dams! For FARMERS! And for everyone else! We shouldn't have to go through a drought again if we have the correct water supply set up!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1916	1	Stop the mandatory regulatory drought and quit diverting the water away to the highest bidder or next water grab. Plan ahead for future water problems by building more storage, rather than being forced to let it all run out needlessly.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1917	1	California is drowning in potholes, pensions, poverty, and underperforming school. We need dams, not trains.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1918	1	Build the Twin Tunnels first, then talk to us. You will have more credibility.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1919	1	I'm a 4th generation farmer and we need this water to give my children the opportunity to become 5th generation farmers in Stanislaus County.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1920	1	Stop the insanity. Build more dams and refurbish those we already have.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1921	1	The last major dam built in California was in 1979. The population has grown considerably since that time without any corresponding increase in the supply of water. We need more supply or fewer people.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1922	1	We want to keep our water to farm a [sic] feed the people.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1923	1	Stop the regulatory drought. We must have water for food.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1923	2	Please increase costs to those areas that need the water which will pay for future efforts to save/store water. This would be more in line with a Free Market system similar to what is employed by many other quasi government monopolies.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1924	1	Stop regulatory Drought and build more storage.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1924	2	STOP the State Water Board from Diverting water from our rivers!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.

Table 4-1. Responses to Comments

Ltr#	Cmt#	Comment	Response
1925	1	Storing water is important. If we don't have enough water our city charges more money for usage and we are restricted from using our water.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1926	1	Water = Life Humans need it! We can't save species if we can't live.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1927	1	Stop the regulatory drought and take care of Californians instead of making a buck off of us.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1928	1	Stop the insanity. The Valley build the dams and created the irrigation project.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1929	1	Stop trying to destroy our state by depleting our Central Valley water resources so that we can't grow the abundant crops needed to supply the country with food. Not only will we not have the needed water, it will kill the economy for our farmers. This is sheer lunacy!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1929	2	Build dams where you need water. Build desalinization plants where there's not enough water to store! That makes sense. More water is better. Duh! Get it right or get out! Stop trying to destroy our great state.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1930	1	"Water, Wealth, Contentment, Health." We want to keep our districts water.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1931	1	Please help keep our water storage.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1932	1	Leave the water alone. The Central Valley farmers need this water. Quit wasting it on a fish that no one cares about.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1933	1	This water grab is a [sic] ridiculous!!! The entire Central Valley is more important than fish!! Food and jobs and the way of life are more important.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1934	1	We need to come up with long term solutions to the drought water shortage epidemic. Water grabs are not fair.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1934	2	We must collaborate and invest in technologies that put the California Water Supply in good standing for future generations.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1935	1	Build more Dams. California is over drafting from the Colorado River water shed.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1936	1	SF, Oakland and LA all sit on a limitless supply of water, the Pacific Ocean! They need to take their money and desalinate instead of diverting water used to grow food. The liberal coast wants California to split from the nation. I say we need to split from them at the Coast Range!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1937	1	Stop the corruption, it's time for some simple logic in Sacramento!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1938	1	Such an important issue should be taken after 2042, once SGMA has reduced the uncertainty and the water accounting is tightened and much more well understood. By then	Please see Master Response 1.1, General Comments for responses to comments that either make a general

Table 4-1. Responses to Comments

Ltr#	Cmt#	Comment	Response
		the tools would have been created to scientifically make a sound decision and know what the benefits are as well as the consequences. Too much is at stake to rush into a decision know, which will be devastating to farmers, families, communities, children, elders, schools, businesses, disadvantaged communities. The fish can wait, they can always be farmed and planted at a later date.	comment on the plan amendments or do not raise significant environmental issues.
1939	1	Stope the State water board from diverting our water from our rivers. Build more dams and water storage!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1940	1	Build more Dams to hold our water! Stop the regulatory drought!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1941	1	It is very refreshing to find some people are starting to get a spine and stop the gigantic waste of valuable fresh water to save the very small fish. Humans need fruits and vegetables grown instead of trying to destroy our food supply.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1942	1	Agricultural matters! The valley needs water!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1943	1	The SWRCB needs to consider the impacts on reduced flows in the Central Valley region that had been forced to deplete groundwater faster than the aquifers can refill. More attention needs to go towards water storage/groundwater recharge and management.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1945	1	It seems that California is intent on cutting off our nose to spite our face. By allowing farmers across the Central Valley the water they require to sustain their agricultural needs, we are ensuring that California will continue to be a top producer of nuts, fruits and other products that are essential to the complex Californian economy. Please, allow our farmers and agricultural producers the water they need to continue to produce the products that are loved around the world.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1946	1	We aren't fooled by talk of salmon rescue. LA can find its water somewhere else. I'm in Ag, my job depends on it!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1947	1	Stop this nonsense with the water. Give our irrigation water back to the farmers, you pencil-pushing rich elites!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1947	1	We desperately need more dams/water storage. I support the movement to save our water and livelihoods.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1948	1	The power needs to be taken from the few that would take the farming away from the valley and make us rely on Mexico, Chile and other countries for vegetables and fiber.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1950	1	Please don't make our fruitful valley a wasteland.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1951	1	Damns [sic], not trains. We know your agenda and we do not approve. Build more damns [sic], now!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1952	1	We need our water. The people of the state need the farming to succeed to supply food, jobs, and economic stimulus.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.

Table 4-1. Responses to Comments

Ltr#	Cmt#	Comment	Response
1953	1	Stop trying to destroy our state and the farms, ranches and dairies we don't need or want you to bring in anything from foreign countries and we know your being paid to destroy us.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1954	1	Return control of our water resources to the people, not appointed bureaucrats [sic] who act as if they are accountable to no one.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1955	1	Whether you are taking water for fish or taking it for the twin tunnels, you are not considering the right of the citizens of the Great State of California to have access to water! This flawed plan will cause harm to the poorest citizens of California, it will cause great financial harm to the farmers who grow crops here, and it will cause great harm to the overall financial health of the state. Please do not be swayed by the governor's foolish plan, as it will devastate the Central Valley!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1956	1	Honor what we the people voted for to increase storage, at the minimum we need to fill the storage we already have available.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1956	2	There is no science that shows running more water in the river will increase the fish population!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1957	1	Do something right for once. No train. Build dams and fix the ones we have.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1958	1	Don't do this--you are drying the valley. You already devastated the valley. The valley is sinking--the water table--the carven fell. What was thinking--you are ruining the valley. Our garden to the world looks like the depressing. Because of you making the wrong choices. Stop building. I'd rather eat good food, not gmo, so stop this, leave our water alone.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1959	1	Our farmers need our water.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1960	1	Our vulnerable residents should not be threatened this way.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1961	1	We need to put a stop to future droughts.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1962	1	Please elected officials get your act together or resign your office. You are placing the lives of CA citizens in danger.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1962	2	We need new dams for water storage and flood control.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1962	3	Leave the Delta water alone, southern CA deserves no more water at our expense.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1963	1	We need more dams and water storage.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1964	1	We expect our water board and all representatives to advocate for the stopping of the regulatory drought proposals! We must act on behalf of our economic future, and the future of our northern CA valley community. The negative outcome on current course will be	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.

Table 4-1. Responses to Comments

Ltr#	Cmt#	Comment	Response
		devastating. This is clearly a plan to bring drought and hardship to our valley communities.	
1965	1	Please let us farm with so many road blocks in our life. Leave us in peace!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1966	1	California's legal residents are tired of liberal policy that value delta smelt and illegals more than building and restoring our dams and roads. Support saving our fresh water to alleviate the need for drilling more wells to keep our agricultural production sustained.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1967	1	Stop the madness, start building new dams!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1968	1	We need the water to fill all the wells in the Central Valley area and for usage by all the farmers/families in this area.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1969	1	State government! You are thieves! Leave our water alone or build more dams to capture water. If we had more dams built, can you imagine how much of the 2017 rain we would have collected?	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1970	1	I can see the misleading disinformation that is being put out and it needs to stop now!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1971	1	I am on a well system for my house. Already a lot of wells have gone dry in my area. The farmers in the area have drilled a lot of deep wells because of the drought. If you take more water they will pump more water from the ground, hurting the existing wells. I cannot afford to drill a new one unless CA wants to foot the bill. I am totally against your plan.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1972	1	Build storage now and repair our current dams!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1973	1	Stop the regulatory drought. Build more dams, more water storage for CA now.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1974	1	Stop taking our water for fish. People and farmers should always come first!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1975	1	Build the dams.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1976	1	Build more water storage. Dams. Save our water.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1977	1	When I was in middle grade school in 1956 my grandfather took me to see and tour the old Don Pedro concrete dam inside and out. He explained to me the features of the structure and its workings to hold water and meter it out over the season as well to generate power and meter falling water to supply electricity for all our use in the irrigation districts. He took me back down the roads along the river and showed me portions of the old wooded flumes that carried water into the Turlock Lake and then into the main canals and the distribution canals that conveyed water to the fields. Through (at one time were open dirt ditches) now concrete ditches and pipelines that brought water to our fields.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.

Table 4-1. Responses to Comments

Ltr#	Cmt#	Comment	Response
		Then he explained to me the blood, sweat, and tears and hard work along with the "taxes" that the farmers' land paid to build the dam and electric power system with the irrigation system that we now use to water our crops. After that trip back to this valley he took me to Waterford by the river and explained to me what the river and canyon revealed in the flows along with the depth and breadth of the river canyon. At that point he explained to me that before the dam the river would be so low in the late summer and fall that one could walk across and never get one's feet wet. There was not enough fish in the river to feed a small town and never has been. While I was in schools in the area the rationale for building a new dam was to be able to go through 4 to 5 years of drought and not be in a short supply of water for irrigating crops.	
1978	1	Let's fix the ones we have and build some new ones! Don't let Moonbeam destroy CA like Obama tried with the U.S.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1979	1	We the people of California demand that you stop flushing our water away. Our water rights do matter. The waters of California are to go to beneficial uses such as farming and mining.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1980	1	Stop high-speed rail, build water banks, give us back our homes and ability make a living, stop wasting tax dollars on a train we can't afford.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1981	1	"Water, wealth, contentment, and health" shouldn't just be a catchy City motto. It should be a practiced and instituted way of life! Build more water storage and keep 'em full!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1982	1	It's time to build new dams to create additional water storage for times of drought and protection from flooding in the wet years. Dams also provide us with a clean source of electricity.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1982	2	The state should not control the use of our local water resources.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1983	1	Stop the high speed rail and build some dams.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1984	1	Build more dams, dammit!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1985	1	Stop the water grab. Save our farms, jobs, and businesses.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1986	1	Please do not neglect the Central Valley. We raise your crops, keep the dairies, grow cotton, etc. We need water for our crops, yes. We also need water to live . . . so we can stay in the Central Valley and do all these things that benefit the many.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1987	1	The State Water Board needs to be advisory only. Any changes in water policy need to be put to a vote by the people affected.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1988	1	Stop taking care of fish before people.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1989	1	This is poor leadership and I don't understand why my tax dollars are being wasted instead	Please see Master Response 1.1, General Comments for responses to comments that either make a general

Table 4-1. Responses to Comments

Ltr#	Cmt#	Comment	Response
		of being used for sane infrastructure.	comment on the plan amendments or do not raise significant environmental issues.
1990	1	The people and industries of the San Joaquin Valley depend on the availability and access to water. Stop cutting access to our water to let it flow into the ocean.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1991	1	Here we have been in a very real drought in California for many, many years. Instead of fixing our water preservation systems in California they planned the high speed rail. During the years of drought, California should have been constructing desalination plants, repairing reservoirs and dams, and just plain and simply preparing for when rain finally decides to grace our lands.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1991	2	I live in the Central Valley, and everyone that I run into is absolutely fed up with California government officials who are trying to deliberately destroy us. We need government officials here who care like the new president does.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1991	3	Care about the home that you live in and start making commonsense choices on important issues that we need to make California survive. Save our water! Stop wasting it out to the ocean. Last I heard the ocean has plenty of its own water and doesn't need any parched Californian water.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1992	1	Fix and increase the water storage we have and build new dams. The population of CA has more than doubled, but our water storage system has not increased.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1993	1	A few people must not be allowed to make decisions that impact the good citizens of an entire region. Please treat our valley citizens as you would like to be treated in all aspects.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1994	1	If the government doesn't get its sticky fingers off of our water supply, California might as well prepare for a mass exodus.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1995	1	I think that we being the breadbasket of California, etc., we need our water kept here.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1996	1	In the last few years the drought in CA has brought fears of no water to most of us. We ask you to save all the water we can in our northern CA dams.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1997	1	Stop emptying our lakes and reservoirs to provide water for the Delta, which would not ordinarily receive saved water during the years anyways.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1998	1	I think we should store the water instead of releasing it into the rivers, our farmers need that water!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
1999	1	Create more water storage to match population increases. Do what's right, not what's easy.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
