

Table 4-1. Responses to Comments

Ltr#	Cmt#	Comment	Response
2000	1	The CA Water Board's lack of regulation (on themselves) and poor oversight has got to stop. What has transpired with the "temporary" water restrictions on the common man has made another injection into the bureaucracy that is California. Now that regulations and restrictions are in place, the CA Water Board does not want to reduce restrictions on the general Californian. What the CA Water Board does allow to happen is they absolve themselves of any restrictions or oversight and continue water resource mismanagement unabated. This has got to stop and until someone steps in, the CA Water Board will continue operations as they see fit.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2001	1	Keep our water here. Time to build more dams and not trains!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2002	1	We need storage no politics.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2003	1	If the state continues to deprive us of water we won't thrive or survive.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2004	1	The board's priorities should be to support the farming community. This plan is ill-conceived. We need to better use the existing water storage, and there will be less pumping of groundwater. Common sense.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2005	1	Who are these morons and who do they answer to?	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2006	1	Ag, industry, jobs, residents all take priority over fish. Stop the regulatory stealing of Valley water!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2007	1	The Water Resources Board does not present a logical argument for increasing the flows of water from rivers vital to San Joaquin Valley's economy.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2008	1	Yes, we need more reservoirs now!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2009	1	No twin tunnels!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2010	1	Please listen to all of us in the Valley! This will cripple our agriculture and cost California the most fertile production valley in the world!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2011	1	We need more dams, not less. What the Water Board is doing makes no sense. Stop with the politics and start taking care of California.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2012	1	Wake up, Governor Brown and all of you Representatives, Senators and Congressmen. Quit ruining our state and causing unnecessary problems and waste. Save our state before it's too late. Quit wasting our water and make us, the people you represent, safe. Quit working for special interest groups. You have a duty to the people that put you in office. If you don't care enough about the people then resign and retire! Now!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.

Table 4-1. Responses to Comments

Ltr#	Cmt#	Comment	Response
2013	1	The people of California need their water. You are trying to starve us out with the impact this will cause the farmers unable to irrigate their crops causing us even higher grocery bills. This is insane what you are considering and will not help with your perceived problems.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2014	1	Governor Brown should be fired for not doing his job taking care of our dams instead of the damn train.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2015	1	What happened to [the] 7-billion-dollar water bond from 2014?	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2016	1	Maybe California should have been looking into ways of storing the abundance of rain water God has been giving us this year. He only helps those who help themselves.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2017	1	The government needs to quit supporting the theft of water from the Central Valley of California, which was already voted down over 10 years ago. Nothing's changed. L.A., if you want water, build yourself a desalination plant [and] quit trying to steal our water. It's not going to happen, I guarantee it.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2018	1	The politicians in California have one plan and that's to steal the water from the Central Valley and sell it to L.A.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2019	1	Fire the Water Board political crony appointees.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2020	1	We farmers are tired of water restrictions.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2021	1	Never seen such mismanagement of the state's water supply in 52 years! Shame on Water Board. We need more dams. Reservoirs and lakes. We waited twenty years for this snow and water. Just to waste it, sending it right back to the ocean.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2022	1	I'm tired of the fake regulatory drought. We need to build more watershed storage and stop the madness.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2023	1	Stop the building of useless high-speed trains and spend the money on infrastructure, water storage, and cleaning up government waste.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2024	1	Please repair existing watersheds and build additional watersheds.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2025	1	It's time to build more dams.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2026	1	Put our farms and citizens first. In lieu of increased taxation that you Democrats will force upon us we should use the funds for the crazy train to rebuild our water system's infrastructure.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2027	1	Save our water! Save the fish through hatchery management, not water releases. Build	Please see Master Response 1.1, General Comments for responses to comments that either make a general

Table 4-1. Responses to Comments

Ltr#	Cmt#	Comment	Response
		dams.	comment on the plan amendments or do not raise significant environmental issues.
2028	1	Scrape [sic] your plan start over your plan is flawed.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2029	1	Build another dam before you take one ounce of water.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2030	1	Keep our local drinking water safe.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2031	1	We cannot afford to have 40% of our water taken just because.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2032	1	Please build more water storage!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2033	1	I really want to be informed each step of the way on this. Please let me know when meetings are going to be held so I may hopefully attend. This is crucial to our water in our area. We were told no more drilling of existing wells or new ones. Can't even repair our pump.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2034	1	Do not divert water from rivers in Stanislaus and Merced Counties. If the SWRCB wishes to move forward, mitigation measures are required to protect groundwater aquifers in Stanislaus and Merced Counties. Existing models and data of groundwater levels and subsidence shall not be worsened.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2035	1	Please don't take our water to save the Delta smelt. The Central Valley needs water for agriculture to feed the nation. We need more water storage, more lakes, and dams to help in times of drought.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2036	1	We definitely need to store more water. In our Central Valley life and many jobs depend on it to have good crops. We can't just let all the water go to big cities like San Francisco or L.A., or just all go to the sea. There has to be an equilateral balance to this and we need to find it.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2037	1	Give farmers what is right to produce the food for our nation. Stop overcharging for water and taking away. Farmers are the biggest conservationists out there.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2038	1	The regulatory drought needs to come to an end. It is affecting all of the resident of California and its impact is stretching beyond our state lines as the regulatory drought's financial impact affects our country as a whole and limits the food we can produce for those in need.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2038	2	Increasing our water storage ultimately leads to a more sustainable California as with more available surface water we can significantly reduce our dependence on groundwater and actually help stop subsidence by recharging aquifers.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2039	1	Build more water storage, not that stupid train!	Please see Master Response 1.1, General Comments for responses to comments that either make a general

Table 4-1. Responses to Comments

Ltr#	Cmt#	Comment	Response
			comment on the plan amendments or do not raise significant environmental issues.
2040	1	Finish Auburn and Sites reservoirs!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2041	1	Have the folks of San Francisco use water from Hetch Hetchy to save their fish.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2042	1	Quit diverting our water! Water is essential for not only feeding the majority of the country, but for giving jobs to people. You want to support immigration? Support keeping our water in California! And forget about the protection of smelt! If Florida can rebuild their coral reefs from using live coral that is literally smashed, then thrives in tanks, to be replanted into reefs, which are beginning to flourish beautifully, despite man's destruction, then I'm certain biologists can build tanks to preserve the smelt, once they figure out their purposes. We need water to survive as well as the coral reefs, which produce oxygen, also needed for survival. What does the smelt do?	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2043	1	If we had built reservoirs over 6 years ago we would have them full today! Government needs to stop playing God with water!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2044	1	We need to protect our Delta and provide water to our farmers. All you people using water in a political war should be ashamed of yourself!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2045	1	I agree that more water storage is the way to go.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2046	1	It's time for the people to reign in the power of the Water Board. If they will not listen to the people of the Central Valley then perhaps the federal government needs to step in and put some controls on this board. No extremely small group of people should have this much power over millions of people. That's not what democracy is.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2047	1	In the middle of a drought, the state wants to steal from the breadbasket of California and much of the nation for the elite who could afford desalination plants? The farmers need their water! Enough!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2048	1	Let's build more dams; let's fix the ones we got!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2049	1	I am a farmer. This insanity needs to stop. We feed this nation. What are you doing? Doing nothing but destroying our state.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2050	1	You're hurting agriculture in the Valley. You need to stop taking away our water.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2051	1	Stop sending our water south for their rich golf courses and swimming pools.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2052	1	If it comes to this I can't see protecting a 2-inch fish virtually nobody has ever seen over the	Please see Master Response 1.1, General Comments for responses to comments that either make a general

Table 4-1. Responses to Comments

Ltr#	Cmt#	Comment	Response
		water needs of millions of California citizens.	comment on the plan amendments or do not raise significant environmental issues.
2053	1	All this board sees [is] money in their pocket to charge more for water. Put people in charge of this board who care about our cities. Change this board immediately.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2054	1	Fire that group! Our water, our cities, our vegetable and fruits. Just another way for them to take more from us. We have meters that we're paying for already. They should be the ones monitored.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2055	1	It is well-known that there is more demand for water than there is capacity to store it. Food first. Let those who live in the desert live with the drought by percentage of annual rainfall.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2056	1	The Eastside Communities are very dependent on ag. Crops grown with surface and well water. Your proposed action toward unimpaired flows coupled with the SGMA may well ensure that small farmers lose the ability to stay, and that the Merced Basin loses its major recharge source. To what end are the ag water reductions? I question the motives.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2057	1	There should be no redirection of our water source to any other areas. We are already in a drought. Do not make our problem worse.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2058	1	Stop this nonsense. These actions really only hurt us, the private citizens and our farmers. These types of Mickey Mouse plans drive up our cost of living. Many of the government sites and entities such as schools/school districts are not held to these rougher requirements, as evidenced by their greener landscapes. When I complained to the City about how I see certain schools watering when they want to, as often as they want, I was informed that many of them are not required to follow the same rules because they get their water from their own wells. I was like, yes this may be true but how many of their wells get water from underground?	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2059	1	Stop the water grab! Stand united!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2060	1	This legislation should be halted and decided by the people of the Central Valley by ballot. Not in secret by bought-and-paid politicians for special interests.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2061	1	Stop taking water and disregarding the groundwater problems. You will destroy farming in the Central Valley.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2062	1	We do not have excess water to give away. We need to ensure the security of our water supply for farmers/food and prosperous/healthy living.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2062	2	What happened to looking out for the Earth and posterity? Will California become a desert due to the greed and negligence of our politicians? California's valley is vital to our nation's health and commerce--without the production of crops and animals our nation will become increasingly dependent on other countries with lower standards for our necessities of life.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2063	1	Our farmers and people need our water far more than Hollywood pools!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.

Table 4-1. Responses to Comments

Ltr#	Cmt#	Comment	Response
2064	1	Remember the thousands that live on the San Joaquin Valley and the millions around the world that count on CA's agriculture.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2065	1	We need to stop the liberal crooks from stealing our water, before they destroy our valley and our way of life.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2066	1	We are in a drought. People and food first. Delta smelt should not be prioritized to punish residents of the Central Valley.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2066	2	No unilateral decision-making regarding our water resources. Instead of wasting our water, why don't you improve the water infrastructure so we are not always beholden to rain and snowmelt?	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2067	1	We need water in our county and surrounding counties to support our farmers and food sources that are shared worldwide. Don't be idiots. Help out the water situation in the Central Valley. Let us keep our water.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2068	1	It disheartens me to drive through the Valley every day and see so many fields for sale. I know families who have had to sell their farmlands, go bankrupt, and lose their homes because of the water issue. No water. No hope. No future for the Valley.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2069	1	Stop taking our water from our lakes to L.A.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2070	1	In the midst of a sustained drought it is necessary to keep what water there is right here to replenish the groundwater needed to sustain life!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2071	1	The Valley needs the water. We grow everyone's food. We have strict restrictions on water usage that other counties don't have. Stop taking the water.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2072	1	I prefer food and eating and drinking to having water in a pool. We need our water too. Save our food that also feeds the world and to save our cattle and others; they provide us with milk, cheese, meat and I think you get the idea. Just because you don't live in the farming and ranching belt doesn't mean some of us don't and doesn't mean we don't feed the world along with ourselves. Wake up to what you're doing. You can get money other ways besides selling our water--probable cause of World War 3.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2073	1	This summer was the first summer that the finches left my garden in June and are just now coming back. I have had them all summer for years and years. Perhaps it is too warm here for them now. Perhaps it is the same with the salmon. Maybe we should try to help the salmon go upriver further north where it might be cooler. Maybe we are fighting a lost battle. This is not really about fish anyway. It is about sending more water from way north of us down to southern California. Maybe they need to conserve more.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2074	1	Keep our water in our valley for our farmers so we can continue to live here. People and the land need water to survive!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2075	1	Please let us farm. Please.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.

Table 4-1. Responses to Comments

Ltr#	Cmt#	Comment	Response
			comment on the plan amendments or do not raise significant environmental issues.
2076	1	Stop taking the precious resource of water from those who need it to feed our families and the world.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2077	1	Build a wall around California! Too many people and not enough water for them!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2078	1	Our rivers and Delta must be protected at all costs. Other sources such as desalination should be used for other areas that have no water.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2079	1	I'm a gardener and that's how I pay my bills. No water means no money; no money means I will have to go to welfare employment. Is that what you guys want, a bunch of people going to welfare, collecting more of your tax money? What a nice way to bring taxes even higher for California.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2080	1	The Central Valley needs water for farming and its residents. If Southern California needs more water they should invest in more desalination plants like the ones in Carlsbad.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2081	1	The Valley produces a lot of food from its agriculture industry. Please do not send any more water to other areas. We, the Valley residents, are strict with water restrictions. Why do we conserve when others do not? It makes no sense. Can government make sense for one time?	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2082	1	We need to keep the water for food production!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2083	1	A-Bar Ag Farms, the food supply that we produce for the world, depends on water!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2084	1	You have a problem! Taking H2O from one area and giving the water to another area is undemocratic. Question: Is the Delta using the water for their farms? Fishing? Water sports? In my area, Atwater, by the golf course on Green Sands Road there is a well that is being "refurbished." I wrote to the Atwater Mayor (no response) for 2 1/2 weeks. Thousands and thousands of gallons of H2O went down the sewers.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2085	1	Get some conservation programs started.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2086	1	It's unthinkable that so many acre-feet of our water would be redirected to the Delta when we have so much need for it in the Valley.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2087	1	This water grab is a form of theft that kills our ag industry and many jobs. We want to work.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2088	1	Do not take our water we need here for purposes elsewhere. You must find other means to supply water to these other areas. You need to come up with a long-term plan. Taking water elsewhere and putting them in a drought position is a poor plan.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.

Table 4-1. Responses to Comments

Ltr#	Cmt#	Comment	Response
2089	1	Make the smart choice for our land and wildlife. The state and all of its inhabitants, animal or human, will benefit more in the future. Poor choices have already decimated the state in many ways. Right choices now can bring us back to a healthy state for all.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2090	1	Depriving people of water is unnecessary. Historically fish have adapted to drought conditions. The attempts to control the flow have been unsuccessful for the fish anyway. You've already hear the arguments against this plan. I'm hoping you'll get plentiful wisdom regarding this important issue.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2091	1	Anything the government tries to shove down our throats, I'm against. The state of California has been ruined by regulations and laws that are left wing. Control, control control.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2092	1	I oppose sending more of our precious water out to the sea. We can't afford to use up our groundwater because our river water was wasted on environmental folly.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2093	1	I'm tired of Northern CA having to send water to Southern CA. They don't have to conserve like we do. Why are they privileged?	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2094	1	Please don't take our water. Our farmers need it!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2095	1	Save our farmers' water!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2096	1	Modesto is farmland; we need our water to stay here.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2097	1	I'm against any of our water diverted to other areas; we need our water.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2098	1	We need to keep our water in the Valley. L.A. is no more important than the people here who have been in dire straits for far too long!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2099	1	Our water needs to stay in the Valley. We are struggling with this drought and our farmers need this water more than L.A.'s swimming pools.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
