

Table 4-1. Responses to Comments

Ltr#	Cmt#	Comment	Response
2100	1	Save our water. Farmers need our water to grow food.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2101	1	The idea that releasing more water into those rivers is going to do anything to help the salmon, which is what I'm assuming they mean when they say endangered species, is ridiculous. Why not put a moratorium on salmon fishing for a couple years, which will likely improve matters tenfold over the proposed action here. The reason is because they're not releasing the water for the fish. They're releasing it to sell it, and make \$\$\$\$\$, and it will never be back. Stop making irresponsible choices that will negatively affect our economy, and the wildlife that exists in these rivers.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2102	1	Modesto City Council is about to raise our H2O bills and we may not be able to use much H2O!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2103	1	If they are going to regulate water, they should start with the people who have the expensive homes. Why should we suffer the consequences and not them? Start with Congress.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2104	1	I don't want water going to Beverly Hills to fill up all the swimming pools of the rich people. Make them stop watering their lawns and filling up their pools. Enough about global warming scam and do something to conserve water instead of building and spending money on the bullet train.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2105	1	Please stop. Our community will be stifled. How is it okay to steal and redirect water that has been in this area for decades? Loss of jobs and agriculture. Have you forgotten where your food comes from?	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2106	1	We need the water for our farmers!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2107	1	Do not pass this ridiculous bill. We need our water here!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2108	1	This is ridiculous. We have seen our water bill rise and our water usage decrease. We don't mind conserving but our elected officials need to stand up for us!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2109	1	We must not destroy our farmlands and heritage of this Valley.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2110	1	State Water Board, stop taking water from the Delta and the Bay. I vote No on the Bay-Delta Plan. Let Southern California get their water from sources close to them, not from Northern California.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2111	1	I am opposed to rigid water release goals. If droughts occur from time to time, we should have the option to save water in our reservoirs to meet local population and farming needs.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2112	1	Not only is this blasphemy against the people the government is supposed to be supporting, it's going to hurt the weather patterns as well. When you mess with Mother Nature . . . be careful. We, the People, should have a say in things of this caliber.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.

2113	1	Isn't this what the "bad guys" did in the western days and took the land from others because there wasn't any water for them to live with? Sounds like that history repeating itself . . . again! Only this time it's the government! Saddening and shameful--is this how you take care of the people?	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2114	1	I find this reprehensible! You take from us and you still charge us more! You're hurting one of the best agricultural areas in the world, and then wonder why we are financially in the pot. I am against this completely!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2115	1	Comprehensive solutions are required that are backed by scientific data.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2116	1	Save the water from our farmers to save our food and help the economy.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2117	1	Even the irrigation districts should not be allowed to sell water or divert, including the feds and state and local governments. Our corrupt government has let so many people in our country illegally instead of controlling immigration so population growth is at a moderate pace and making the paperwork and time to become a citizen easier so they can contribute to society. Now it's all political corruption they leave open borders because it's cash in the corrupt government's pockets. All the money paid in payroll taxes from an undocumented worker's fake social security number has nowhere to go--it's all extra cash.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2118	1	Do not take water away from ag in the Central Valley.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2119	1	I want to add my objection to the proposal to send water from Northern California rivers and streams to Southern California. Please stop this ridiculous plan.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2120	1	I don't believe in the so-called drought when the planting of millions of almond trees is allowed, new construction, etc., etc.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2121	1	We want common sense governing our water supplies. No more pet projects.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2122	1	I oppose because the plan only hurts people, especially Central Valley!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2123	1	We get notices and threats if we used too much water because we're going through a drought so who are you to sell what little we have left and we sure don't get any tax breaks for your sales.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2124	1	The bureaucracies of government agencies is so impacted by environmental wackos, that all common sense to how our country works is loss! They do as they want! Not listening to our elected officials that have some common sense.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2125	1	We are the endangered species in my eyes The way the water board is doing business has to be stopped or California will become more of a welfare state!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2126	1	Stop this insane water grab! What generations have worked for, this is destroying!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2127	1	The Bay Delta plan is a disaster! The valley is suffering big time from it! I'm sure the new plan will only make it worse!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.

2128	1	Our Central Valley feeds 80% of the world with a safe domestic food source. No Water, No Food!! We will be forced to consume food grown by other countries with little or no restrictions on pesticides and chemicals. We all need to oppose the State Water Board's proposal to unjustifiably increase unimpaired flows on the Tuolumne River because such an increase will have potentially irreversible negative effects upon surface water supply availability, groundwater sustainability, jobs, labor, income, tax base and the greater ...	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2129	1	This is a movement to consolidate power of the state away from the people. STOP the infringement on the 2nd Amendment! Also I oppose the Governor's plan to/of anti-constitutional takeover.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2130	1	Build desalinization plants!!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2131	1	This is the valley that grows your food. Stop taking water for food.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2132	1	SGMA is in place. Give it a chance to work at sustainability. Don't sabotage the efforts of all Cities, Water Districts, Mutual Water Companies, Farmers involved.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2133	1	I feel that if the central valley has to be limited and on limited watering days, then so should the whole state of California. Why should the wealthy get more and the rest get less. The farmers need water for their crops, food and everything else that is put on our tables.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2134	1	This board is out of control! Are they bought and paid for by conservationists, salmon lovers, or interests in Southern California? Or are they just government employees who were brainwashed by liberal college professors and have never had to work to make an honest living? Uncle Jerry thinks these people should protect us from ourselves!!!! I want to know your opinion of the ballot measure to strip away some of their power and give it to the legislature. Good, or even worse for the Central Valley?	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2135	1	I do not want to put fish before humans. I do not want to send more of our river water to Southern California. I do not want people appointed to the Water Board to make these decisions. For the most part they have never had to be productive. They just come up with these stupid ideas and soak up tax money from the rest of us.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2136	1	We need to seriously think about more reservoir storage or severe growth restrictions. Taking the water the Central Valley needs for agriculture and diverting it south so someone can fill their swimming pool isn't right. Also sending it downstream so salmon can spawn is ridiculous also.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2137	1	No more water to So Cal. Make them build desalination pants. Quit draining our Nor Cal lakes for stupid rich people to waste without consideration for others.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2138	1	Gov. Brown should be ashamed of himself by paying off his political allies in the south by destroying the Delta waterways by shipping water south. Quit building houses in the desert and quit letting them landscape and grow lawns in the desert.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2139	1	Leave Valley water alone! Build more dams and pipeline water from the north!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2140	1	The suburbanites do not understand the impact of pulling more water from not just farmers, but the wildlife like trout, spawning salmon, and the waterfowl that migrate here every fall. These animals depend on our resources here in the Valley, not the East Bay or San	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.

		Francisco.	
2141	1	What else should the communities of the Central Valley expect from these narrow-minded State Leaders? They push for the Train to Nowhere, refuse to support the construction of dams, the Dept. of Fish & Game refuses to listen to any commonsense approach to control the bass in the Delta. So Sacramento and the Bay Area prosper and the Central Valley communities pay the price. So to you at the State Water Board & Dept. of Fish & Game, "Thank you so very much" from one of the many living in the Central Valley "basket of deplorables."	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2142	1	Let's work together in a transparent process that best suits all players.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2143	1	Why help a fish, that almost extinct anyway, to ruin the thriving Valley?	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2144	1	We the people shall push for the rights to our Valley water, to stop wastefulness and promote healthy sustained water levels for our Valley.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2145	1	Cutting water to areas of fertile land is not smart. It shows no consideration to the workers, the farmers, the business in metropolitan areas, populations who consume the products, or the tax base that is used in a multitude of ways.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2146	1	All this is a boondoggle effort on the part of the coastal elites who couldn't give an [expletive] about what happens in the Valley.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2147	1	I want to know what mitigations are being proposed to help the Central Valley, the weak stepsister of California, survive. I believe in environmental protections but they must be implemented with economic relief for the poorest residents and most threatened area in the state, the San Joaquin Valley, which will pay the most severe and lion's share of the price!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2148	1	I'm opposed to rich people using all they want for their yards; our yards are just as important to us as theirs are to them. We need to build a new dam before it's too late. During a drought no one should be able to fill swimming pools.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2149	1	They have to stop giving our water away to L.A.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2150	1	The proposed diversion would guarantee a man-caused disaster to our valley.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2151	1	It's time that the Water Board and State Representatives take a look at how business and homeowners in Northern California on how much water that they continue to waste. I've stayed at hotels in Southern CA that wash down their entrances every day with water that I have to cut back on just so they can waste. Building tunnels will destroy what makes our communities and business the best in the world, especially our farmers. You will destroy this state and it needs to stop now.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2152	1	Diverting water from CA farmers will turn CA farm ground into a dust bowl, forcing USA to rely on imported food. This raises food safety and security concerns.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2153	1	If California continues these regulations that take water from the farmers or make it too expensive for them to water their crops our state will experience a great economic loss. Not	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.

		only will the farmers leave, but thousands of jobs supported by the farmers.	
2154	1	We can't even water our yards but a couple of days a week. We buy water to drink also. That's wrong to sell our water. We pay too much for it.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2155	1	Stop stealing our water. Cut off water to Nancy Pelosi's Napa ranch--that should help. Oh, and turn off water to Barbra Streisand's, too.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2156	1	Water availability is crucial to our remaining in the beef cattle business.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2157	1	Please consider all parties involved in water rights--not just the politics. Instead of bullet trains--water should be the Number 1 priority for California. We need long-term solutions that are viable.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2158	1	Humans need the water more than the smelt. Give our water back!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2159	1	End the deep pockets [and] build more reservoirs. Beginning in So CA, to ruin the Delta, depreciate land and home values--totally acceptable. Get Brown out of office [and] keep idiot Newsom from being governor. Listen to us, the taxpayers.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2160	1	Build more reservoirs, stop the tunnels [and] build more build more reservoirs in S. CA.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2161	1	We need more storage and dams. The Central Valley has needs that have been ignored for far too long.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2162	1	Get Southern California to break up the Los Angeles River and build some reservoirs and they will have plenty of water. Never done, because they wanted to keep the cost of water up.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2163	1	Don't take our water. Who chooses where it goes? We're a farming community. We need the water to grow the food you put on your plate every day.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2164	1	Water rationing should be strictly enforced in all California counties! Why are we, here in the Central Valley, so severely rationed while Los Angeles is not? Why do our lawmakers allow water to be thrown away in one city and ignore the water poverty in others? Such blind self-interest stinks of corruption! We cannot continue to allow some areas to use unlimited water as if they lived in a rainforest, when in practical terms, most of this state is closer to a desert, by rainfall numbers. Do we really expect distant water sources to supply our needs forever? Then forget the oil pipeline! Better get busy on a water pipeline from Canada!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2165	1	The State Water Board is no longer needed to control the water in California! Governor Brown needs to dismantle The State Water Board as with record rainfall in 2016, every other reservoir near normal levels, except San Luis Reservoir. The word drought is no longer brought on by Mother Nature as it is being created by this extreme Water Board and the environmentalists that are controlling the system. We have given the most precious commodity in California to a group that sees no use for agriculture in the Central Valley. They are a disgrace!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2166	1	They are wrong and I don't understand why or how they can get away with this.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.

2167	1	Wasteful spending of our water resources and out-of-control groundwater pumping has got to stop! Permits for new ag wells need to be stopped as well until our current underground water supplies replenish. This current behavior is unacceptable and irresponsible.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2168	1	We need our water. Figure another way to get water to them. Our farmers need the water . . . leave ours alone.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2169	1	Please save our water for farms.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2170	1	Stop taking drastically needed water from the fields that grow so much of the produce and farmlands in our valley. We suffer greatly for your uneducated wasteful thinking and voting.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2171	1	Stop the unfair practice against central California! We deserve the water, too!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2172	1	I live on ten acres with well water surrounded by active farming. I've lived in Merced all my life and on my rural Merced County property for close to 50 years. I am very unhappy with the potentially devastating decisions that have been made.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2173	1	Save our rivers; stop the tunnels in the Delta, too!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2174	1	We don't have enough water for our farms and people in the Valley in Northern California. The water should stay here. Southern California has the ocean; they should desalinate that water. It seems it would be about the same cost and not damaging to Northern California. It might even lower the water levels that are rising on the Pacific Coast.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2175	1	We need to stop the Water Board! This valley will turn back into a desert. Save one of the most fertile lands in the world.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2176	1	This will devastate our community. Please consider keeping the job market thriving vs. killing jobs. Also do the numbers on the amount of people who rely on water for employment.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2177	1	Do not take our water. Farmers are having enough bad time as it is due to the drought.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2178	1	We desperately need all our water to stay in our reservoirs. This will also help our groundwater reservoirs. The wells are drying up and the ground is sinking.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2178	2	We cannot support water diversions when we have so much to lose. This Valley feeds a big percentage of the world.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2179	1	You cannot take water from farmland without hurting someone's lifeline. No, you cannot take our water.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2180	1	I'm already on restricted watering from the state drought and now will be charged more per month by MID for water usage I'm not able to use. Our water should not be diverted.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2181	1	I'm a farmer and we are literally starving, not to mention all the jobs we've lost.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2182	1	We have to put an end to this shameful attempt to take our agriculture water (that feeds that world). There is more profit in the greening of Southern California than in almond or	Please see Master Response 1.1, General Comments for responses to comments that either make a general

		corn. We have long-standing rights to our irrigation water.	comment on the plan amendments or do not raise significant environmental issues.
2183	1	This has to stop, the water going to L.A. These farmers need the water.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2184	1	Please do not take our water for the twin tunnels! We all are opposing this. Please hear our cry to keep our water.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2185	1	Please stop taking Northern California water. Build reservoirs for down [in] Southern California. State of Jefferson we will become.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2186	1	We desperately need our water to continue to farm.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2187	1	Save our water. Please keep the water in the Central Valley for our farmers.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2188	1	This action is absurd, that the State Water Board would not listen to business, agriculture, and citizens of this area. This action demonstrates how out of touch the Water Board is. The economic impact of this decision will cost jobs and create financial ruin to our already challenged economy.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2189	1	Our farmers and residents in the Central Valley need our water to remain in our current area. It is bogus that we cannot use our own water and we must let it flow into the Delta so you can build a third water supply line underground to feed the residents of the greater Los Angeles area. You have the Delta-Mendota Canal, California Aqueduct, and now you want to build another water source underground so no one can measure how much water the state is supplying down south. We the residents in the Central Valley and the world want to eat food that is grown in the Central Valley and not imported . . .	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2190	1	Leave the water where it belongs here in the Central Valley and do not build third pipeline to give more water to the Los Angeles area. (Delta-Mendota Canal and California Aqueduct.)	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2191	1	We need all the water to stay in the Valley for the farmers.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2192	1	Farmers need water. Where do you get your food? Don't you want to eat?	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2193	1	They can have our water after our dams are overflowing.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2194	1	Are you nuts? That is our drinking water. If people want swimming pools, they can use seawater. It may not make a dent in the rising sea level, but we cannot drink seawater. Quit being selfish. We need to look into using desalination plants to convert seawater to drinking water.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2195	1	Why are you stealing our drinking water? Stop it. You are killing California with your stupidity.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2196	1	Why are they stealing water from crops, dairy, beef, pork, poultry, and textiles that feed and clothe the nation? These idiots are morons. Do they not think? Or are they just corrupt?	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2197	1	Build more storage and stop using tactics that have proved futile for 50 years.	Please see Master Response 1.1, General Comments for responses to comments that either make a general

			comment on the plan amendments or do not raise significant environmental issues.
2198	1	Stop the madness! Use real science to determine and make choices.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2199	1	Water should be for farmers and ranchers, not swimming pools. Not sure where those people think their food comes from.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
