

Table 4-1. Responses to Comments

Ltr#	Cmt#	Comment	Response
2200	1	Do not take our water away. Our kids will need it in future years.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2201	1	Need water for farmlands . . . need farmlands to eat! There shouldn't be any questions needed! Plain and simple as that!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2202	1	We are a very large agricultural area. We need the water for our crops. We need to also fill our reservoirs. Melones Lake is desperately low. It will affect the wildlife that lives in the lake. Stop sending away our much needed water. The water is important to sustaining the crops in the Valley!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2203	1	Where water flows, food grows. This issue is preposterous. Somebody is making money off of this garbage; why else would it be going on? Greed. In this case, the root of evil is money. Shame on those greedy people.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2204	1	We need to stop running our water out into the ocean, fill up all reservoirs, irrigation canals, and any other water storage available to keep our crops, trees, plants healthy and productive! This not only benefits our local economy, businesses farmers, and families, but healthy well-watered trees, plants, fields help improve the air quality in the Valley!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2205	1	Don't dry us up this year for they have a large dam down south to hold their water, not ours.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2206	1	Food grows where water flows! Save water for agriculture!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2207	1	Please stop your greed and do what we voted you in office for.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2208	1	How can my elected officials disregard the environment like this for self-interest = greed? Have some morals and stop this.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2209	1	Stop this arrogance and water back back-door deals. Restore the Delta and do what we elected you for. It just kills me to see you sell us out for the ones that donate the most to you.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2210	1	You are paid to represent us, not destroy our ecosystem. Greedy, shameful. How do you look at yourself in the mirror?	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2211	1	This plan is detrimental to all of the Valley and everyone in the country who relies on it for food.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2212	1	Let's focus on equality, and right now farmers and people get 50% of our water and rivers get the other 50%. There is zero proof that we should be changing the way our water is divided.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2213	1	We need our water. Last year two trees were dry in front of my house because the city only gave two days to watering the plants. It was too hot and my trees died.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2214	1	Please change the decision and give the water back to agricultural use.	Please see Master Response 1.1, General Comments for responses to comments that either make a general

Table 4-1. Responses to Comments

Ltr#	Cmt#	Comment	Response
			comment on the plan amendments or do not raise significant environmental issues.
2215	1	Is the money really worth more than the people? Do the right thing.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2216	1	To take away more water will just kill the San Joaquin Valley. Our well pump froze last year because our water table dropped. If you could see all our dead and dying trees, many, many neighbors whose domestic wells are drying up. Cities whose wells have dried up and the farmers, to survive, keep drilling and drilling, taking what groundwater is left, with no rain to replace it. Someone needs to wake up.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2217	1	Hold back our mountain water for people and farming. We want to live in peace with plenty of water to thrive. Stop the insane letting of water flow out to the ocean. The ocean has enough water. All farming matters. All lives matter. Fresh water matters to human life.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2218	1	The drought affects humans all over the country. The large percentage of water being directed to the Delta to "try" and save an ecosystem with no regard to the ecosystem of the Valley must stop. Remove economic upheaval [that] lack of water in the San Joaquin Valley has and will create--look at the barren fields. Water sustains life with direct intake and consumption by plants. Why are we adding water to water instead of our fields and home?	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2219	1	Green lawns in Southern California or green fields of crops on the San Joaquin Valley. I vote for food, not lawn. The Valley residents have saved water for these drought years to keep more for our farmers, not for vanity. I vote brown lawns in the south for green fields.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2220	1	Food first, farmers first, justice.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2221	1	We need to work together on these issues and stop dictating policy. The Central Valley is being attacked unfairly with little time to respond. I support Adam Gray and our fellow citizens against government regulations that are unfair and appear to be dictatorial.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2222	1	Human beings take precedence over any other creature in this world . . . if we are to be prudent stewards of all aspects of the world around us--there must be a balance to which life is properly sustained--but not to cut off a life-sustaining source such as water which helps us feed over 100 million people. Yet bureaucrats consider us expendable in their twisted and illogical and in-reasoned goal of "saving" a fish which is not endangered. As you point out--the bass are doing the damage!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2223	1	Water is a resource we are already in dire needing more of. Don't take what resources remain for our local economies.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2224	1	We hardly have any water here where I live. If L.A. and Hollywood would spend money on desalination of ocean water instead of fancy cars and not caring about the Central Valley where their food grows then I say don't give them the water!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2225	1	Leave our water alone! Our community has suffered through years of drought and the water needs to stay in our valley for our communities to survive.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2226	1	Please save our water! The farmers need it more than the rich movie stars for their swimming pools and their vast green lawns. Our yards are drying up, our trees are dying.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.

Table 4-1. Responses to Comments

Ltr#	Cmt#	Comment	Response
		Please stop sending our water down south to L.A. and Beverly Hills. Enough is enough.	comment on the plan amendments or do not raise significant environmental issues.
2227	1	Stop taking the Valley water and filling the pools of the wealthy in Southern California!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2228	1	Our government officials have been allowing certain individuals to pump our groundwater and sell it at mega profits. They are drying up our aquifer and there will be no water for crops and people who live in the country, who have no access to water other than their private wells, will be left without drinking water.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2229	1	This is our water, not the state's. If we wanted to send it all down the Delta, then to the L.A. basin, our predecessors would not have used their own funds to build the dams and reservoirs to build our system.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2230	1	Valley residents own the water the state wants to steal. Governor Moonbeam at it again! It is unforgivable the state wants to steal from its residents.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2231	1	<p>No Water = No Farmers</p> <p>No Water = No Farms</p> <p>No Water = No Jobs</p> <p>No Water = No People</p> <p>No Water = Depopulation</p> <p>Water = Control</p>	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2232	1	State Water Resources, cutting more water off for our farmers--and I'm one--is not an option! You're drying up the Central San Joaquin Valley!, The Kings River which is 300' from my kitchen window in the Island District of Lemoore, California, has not had one drop of surface water provided by our property owner water rights allocated pre-1914 ran in it for four years now going on five! Our wells are failing from lack of recharge from our Kings River! We pay water taxes and the Kings River has been diverted.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2233	1	Stop taking our water. This valley grows food; we feed 80% of this country. So find your own resources. Take the salt out of the ocean water. Let our farmers do what they do best.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2234	1	There needs to be a broad-based input and discussion on water. People and food should be a priority.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2235	1	This is utterly ridiculous. Our farmers are suffering and orchards are being destroyed just so they can sell our water? Come on now. This is madness.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2236	1	This area produces so much food for the world and provides jobs for many, do not take the water away and destroy farming which affects so many.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2237	1	No more water to L.A. They do nothing to save water.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.

Table 4-1. Responses to Comments

Ltr#	Cmt#	Comment	Response
2238	1	I oppose the depletion of Central Valley water. Seek a plan for desalination OD Pacific coastal water instead of raiding the freshwater waterways that our crops and valley residents depend upon.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2239	1	This state is dry enough! The Board needs new members!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2240	1	I am pretty sure most of you have been to see the salmon and all the storage water that is wasted out to the ocean and the Sacramento River and others to see the delta smelt (not indigenous to the area) but have you been to see the valley communities literally drying up? Have you seen the people whose lives your decisions have destroyed? Do you have a plan for where to get food from that is safe, good quality, and affordable once the farms dry up? We are tied to the Middle East now for fossil fuel, can you imagine what it will be like if we become reliant on other countries for our food?	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2241	1	We should not divert our water and ruin the beautiful green and wonderful farming and ranching communities in our valley because of bureaucratic greed!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2242	1	We must stop this! This plan will cause severe consequences to our valley and farming communities.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2242	2	I have a hobby ranch and have already seen the cutbacks to my irrigation rights and my well water level decline. Without sacrifice water recharge we will have a devastating environmental impacts to our area. This plan is criminal!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2243	1	I urge you to involve local stakeholders in the process to update the Bay Delta Plan. You are casually considering destroying a large part of the Bread Basket of the World as well as a portion of our national security (nationally grown food is key to security). In addition, you will be destroying generational family farms and livelihoods, jobs, communities. There is a better way: make this a win-win situation and search for a good solution involving stakeholders and health to both agriculture and the Bay Delta area.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2244	1	Do not take any more of our valley water. The State Water Board cares only about the Bay Area and the Los Angeles area.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2245	1	Keep northern California water in northern California! Southern California has miles of coastline yet no desalination plants! Build desalination plants and reservoirs in southern California before you do to the Delta what was done to Owens Valley and Mono Lake! Fix this problem before it is too late!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2246	1	Stop killing food grown for this and other states by stopping water. What will you do when this billion dollar economy has been driven out of this state?	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2247	1	Do not take water from Delta or river water from the valley! We need our water for farmers for food to feed us and to keep my well from going dry. No twin tunnels, ever!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2248	1	Save the Central Valley and Delta water by not sending it south as Gov. Brown would like for his political friends.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2249	1	We need our water in the Central Valley! This is a huge agricultural area and needs the	Please see Master Response 1.1, General Comments for responses to comments that either make a general

Table 4-1. Responses to Comments

Ltr#	Cmt#	Comment	Response
		water to prosper! The drought has hurt this area tremendously!	comment on the plan amendments or do not raise significant environmental issues.
2250	1	Let's be reasonable. Mass desalination is the answer from San Diego to San Francisco.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2251	1	California is the main source of fruits, vegetables, and almonds in the world. 95% to be exact. This is making worldwide news. It will not settle well and will have a negative impact for those who need these resources.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2252	1	California Water Resources Control Board: You have a responsibility to examine all factors pertinent to water usage--not just environmentalist advocates, fishing enthusiasts, and other special interests. The economic impacts of reduced water supplies must be accurately analyzed before decisions are finalized.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2253	1	You don't have the right to take our water from northern California in order to feed southern California, the people that don't even help as far as conserving.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2254	1	No fair cities have nice grass while us in the Ranchos are only able to water trees on limited days. Our property values are going to be affected by this. They're building more residential homes that is going to affect water quality also the query!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2255	1	It's a shame that our property look like a dried desert. We purchased a home with land so we could enjoy God's beauty, summer looks like fall all year round and I travel to other areas and their yards are beautiful. We get fined if we water our yard, it's not fair! Please stop water control. Plant grass means better air!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2256	1	Leave our water alone! Brown needs to go. God knows he's sucked enough out of our economy for long enough. Get rid of him before he sucks every drop of water out of the valley.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2257	1	It's time to vote all these career politicians out of office then find people with some common sense to fill these positions.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2258	1	We need water for our feed, food.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2259	1	We need our water for the food and animals and our children.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2260	1	We may have had some rain this past year, however the ground water needs many years to replenish itself. By diverting waters we will not have enough water for people and farmers. We have lost many trees in our town not to mention up in the mountains. This is not good.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2261	1	The citizens of the Central Valley have taken this drought very seriously. It's an insult to hear that doesn't transcend to Southern California. Our water is precious to us in so many ways. How dare the powers that be who think we are not affected by the growing costs of its usage and our food. Shame on you!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2262	1	Without water to farm the economy of the state will be destroyed.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.

Table 4-1. Responses to Comments

Ltr#	Cmt#	Comment	Response
2263	1	My family has been farming in the Central Valley since the 1930s. I have financial interest in the land in California.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2264	1	I oppose the plan to divert water from our rivers and would appreciate more information/USPS. Instead of wasting money on the “supertrain” in California, why not all states develop water “pipelines” that could safely transport water from flooded states to those states that are having drought problems. Therefore, by diverting flood water, might that also help aid in a quicker recovery for those trying to recover from the devastation of the flood? Of course, “safety measures” in place so as not to transport toxins, i.e., chemicals; plants and animals NOT native to the state(s) receiving the water. Think outside the box.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2265	1	My well just went dry. I have not water for my livestock. Stop stealing water from Fresno County. I am going bankrupt buying water by the truck load.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2266	1	Use some common sense. Come down here to the Valley and see what the consequences will be if so much of our water is diverted from the Valley. I’ll even escort you around.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2267	1	It is nonsense for the people of this area to be left out any water decision, people in this valley payed for the water instructor in this area with a promise of that they would have the water they need, now some group of self-righteous people who call themselves environmentalist and have no idea of how water keeps food in their bellies and in the mouths of millions of people want to take the water and waste it on fish and other so called restoration projects, which if a common sense approach is used both sufficient water for this valley and conservation projects can be accomplished.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2268	1	The lives and quality of life comes before any fish or the annual flood control. If the fish are so in danger, then we can have fish hatcheries and keep the numbers supported until the rainfall comes up to normal annual rainfall levels. As for flood control, we’ve had lower rain fall amounts for several years so what does the Water Resources Control Board do, they start releasing water for flood control. First off, rainfall varies from year to year so releases should not begin until the dams are close to full until we are [note: comment cut off]	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2269	1	Totally against water for fish instead of humans!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2270	1	The state would love nothing more than take all the water from the agriculture community. The next step the state of California will revert back to a desert.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2271	1	No politics on our water. Not negotiable!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2272	1	This has to stop, people’s lives are more important than a fish. This is a man-made drought due to the fish, we put more water out to sea than the farmers use.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2273	1	Stop taking the water that supports they valley’s industries!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2274	1	Stop taking water from our area. We need it for our communities and our crops that feed America.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.

Table 4-1. Responses to Comments

Ltr#	Cmt#	Comment	Response
2275	1	Stop killing our farms. There is only 2% of the US population feeding this nation and the majority of the world.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2276	1	Get California out of Agenda 21.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2277	1	Please do not take Northern California's water because Southern California did not plan for the future better! Find your own water and we do not want your high speed train either!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2278	1	We have lost enough water for their swimming pools. We need water for our farms and to keep our homes healthy. Stop it now!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2279	1	Farmers, cities and other Valley water users are doing their best and making significant investments in conservation and recycling projects to make the most of our limited water supply, but will be unable to comply with state regulations and stay in business if our surface water supplies continue to be recklessly flushed out to the ocean with little to no measurable benefit to environmental health.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2280	1	Do not dry up our valley! No more dry wells!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2281	1	Our county cannot afford to lose its water. Any of it.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2282	1	This additional allocation of water is a continual grab from a state governmental agency that lacks the foresight of its decisions.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2283	1	Even the salmon folks know all they need is a pulse flow for 3-5 days. Take the water you take the farm. By the time you figure it out it will be too late. You will be hungry.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2284	1	The water is for the farmers and the community, not for the environmentalists.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2285	1	Water for crops is more important than fish.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2286	1	Any movements or regulations to take water away from Central Valley agriculture will be disastrous not only for the region but for California's economy. As much water as possible must be made available to farmers first. They help to feed the world, to say nothing of helping to make California the world's sixth largest economy.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2287	1	Without affordable water the valley and the family farm is doomed for disaster.	Please see Master Response 1.1, General Comments, for responses to comments that either make a general comment regarding the plan amendments or do not raise significant environmental issues.
2288	1	The Central Valley feeds the world and needs water to do so!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2289	1	Water without a doubt is the most essential need next to air that God has freely given us! How cruel for anyone to think of depriving us already drought-stricken Central Valley residents! Is it not enough that our Valley's air is already polluted via the Bay Area?	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.

Table 4-1. Responses to Comments

Ltr#	Cmt#	Comment	Response
2290	1	What drives liberal/progressive thinking? It sure isn't common sense!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2291	1	California needs an add kicking. We will take the water that belongs to us. Don't bring and trap any fish. No aquarium is wanted. Save water for the people.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2292	1	Please keep me informed! I want to keep our water here for our farmers.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2293	1	Do not just make arbitrary changes to the current plan without input from all stakeholders. People's lives and livelihoods rest in the balance.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2294	1	The plan unveiled today will bring on the extinction of the most fertile and productive area in the world. There have been numerous studies focused on the number of salmon ultimately affected and it pales in significance to the number of jobs lost, number of people displaced, and entire traditions lost. Please reconsider this plan.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2295	1	The Regulatory Drought is bad for agriculture which provides many jobs on the farms as well as related industries. It will hurt our economy and the country's and world's food inventory which is already in short supply. Please stop this as it will have disastrous effects for our and our children's future.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2296	1	Before the dams the rivers would run dry or smaller volume and the fish survived. The major problem is the introduction of predator fish for sport fishing which preys upon the fry of the salmon, trout and other species.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2296	2	We need the water for agricultural crops so we can provide food that is necessary for human survival for our nation as well as other countries. There is starvation throughout the world and as the population increases the need will greatly increase and we must have water for these crops to feed a hungry world. The San Joaquin Valley is the bread basket of the world with its rich agricultural soil and should be protected.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2297	1	Please help stop the tyranny of state government! If the state ignores the rights of landowners and water rights in particular, our entire Central Valley is doomed. A multibillion dollar ag economy and a way of life for hundreds of thousands of people are at risk.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2298	1	Protect our water rights. Stop exporting the valley's life blood.	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
2299	1	Our water, our life. If you want it, divert from Hetch Hetchy like San Francisco or build desalination plants along the coast. Turn on the Delta pump!	Please see Master Response 1.1, General Comments for responses to comments that either make a general comment on the plan amendments or do not raise significant environmental issues.
