Subject: RE: Update on cyanobacteria conditions in Stockton Deep Water Ship Channel

Hi Jeff, Lisa, and Linda:

I just wanted to provide you the latest update on Microcystis conditions in the Stockton Deep Water Ship Channel. DWR completed their third Dissolved Oxygen Monitoring run on July 05, 2016 in the channel from Prisoners Point to the Port of Stockton's Turning Basin. Below is a color coded representation of their visual observations on Microcystis. Again, these observations are qualitative only and do not provide any information on numeric concentrations or if toxin is present in the water. The purpose of the email is to keep you aware of the conditions in the channel as we progress through summer.

Best regards, -Christine Joab
