

Written Testimony of Nancy Parker

My name is Nancy Parker. My statement of qualifications has previously been submitted in this proceeding as DOI-35. I am an expert in CalSimII modeling of the Central Valley Project and State Water Project, and I have performed extensive review of the CalSimII models used in this hearing process. I am familiar with the use of CalSimII model output as input to effects analysis models, including DSM2, river temperature, and habitat models. I have reviewed and concur with the testimony provided by Erik Reyes in DWR-1016, and I am able to answer technical questions regarding CalSimII modeling and the use of its output in effects analysis models.

This concludes my written testimony.
