

**Written Testimony of Kristin White**

My name is Kristin White and I have been involved in water supply modeling for Reclamation systems through various projects since 2010. In addition, since 2013, I have served as an operations liaison for internal divisions and external agencies to provide input and review on evaluating operational effects, operational descriptions and appropriate methods to model current and future operation of the CVP. In November 2017, I was selected for the position of Deputy Operations Manager for the Central Valley Operations office. I joined the Bay-Delta Conservation Plan (BDCP) modeling team in mid-2014 and assisted the consultant with updating the base model (without project) to be consistent with the most recent Reclamation model at that time. Through this effort I was involved in numerous model reviews of both the model itself both for modeling accuracy and appropriate reflection of CVP operation. I have reviewed and am familiar with the CalSimII models and operational assumptions used in this hearing process. I am able to answer technical questions regarding the use of CalSimII to model and analyze CVP operations and how components from the modeling may be operationalized within the CVP.

This concludes my written testimony.
