a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

The Elevations are based on National Geodetic Vertical Datum of 1929 (NGVD 29)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

"Alternative 4 H1" represents the low delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

The Elevations are based on National Geodetic Vertical Datum of 1929 (NGVD 29)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

The Elevations are based on National Geodetic Vertical Datum of 1929 (NGVD 29)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

"Alternative 4 H4" represents the high delta outflow scenario of Alternative 4.

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

"Alternative 4 H2" represents the enchanced spring delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

"Alternative 4 H4" represents the high delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

"Alternative 4 H2" represents the enchanced spring delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

"Alternative 4 H1" represents the low delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

"Alternative 4 H4" represents the high delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

"Alternative 4 H2" represents the enchanced spring delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

"Alternative 4 H4" represents the high delta outflow scenario of Alternative 4.

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

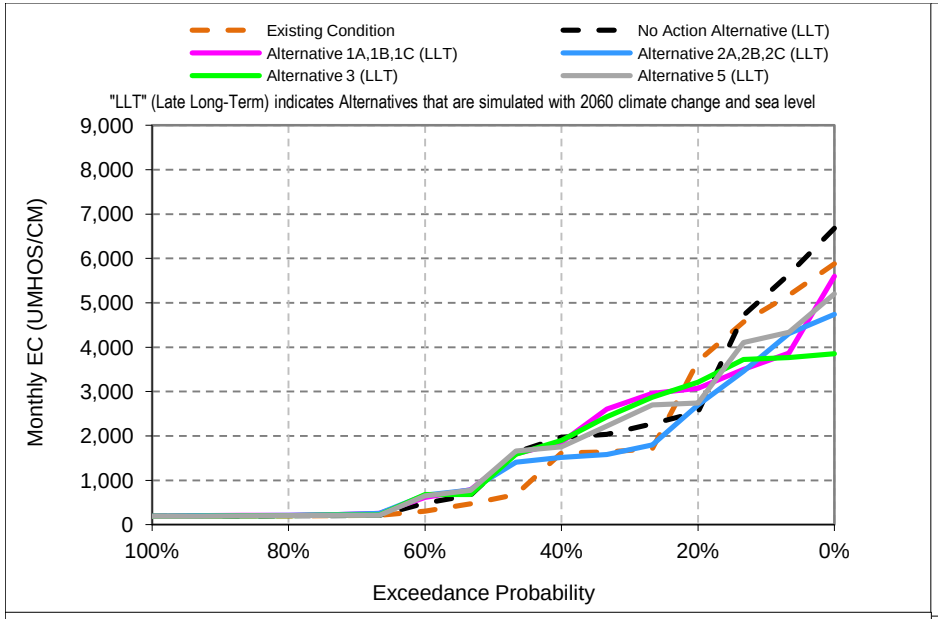
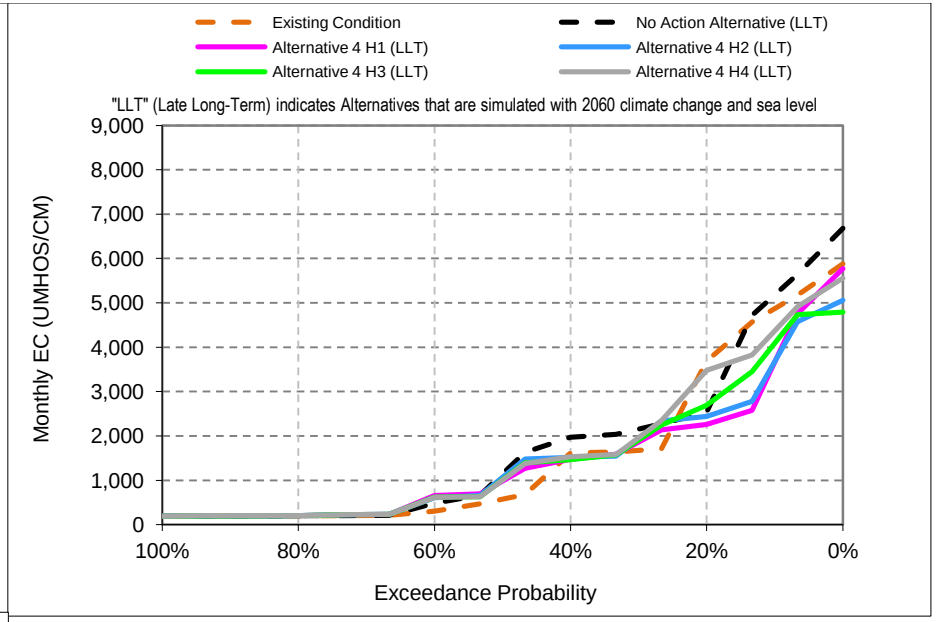
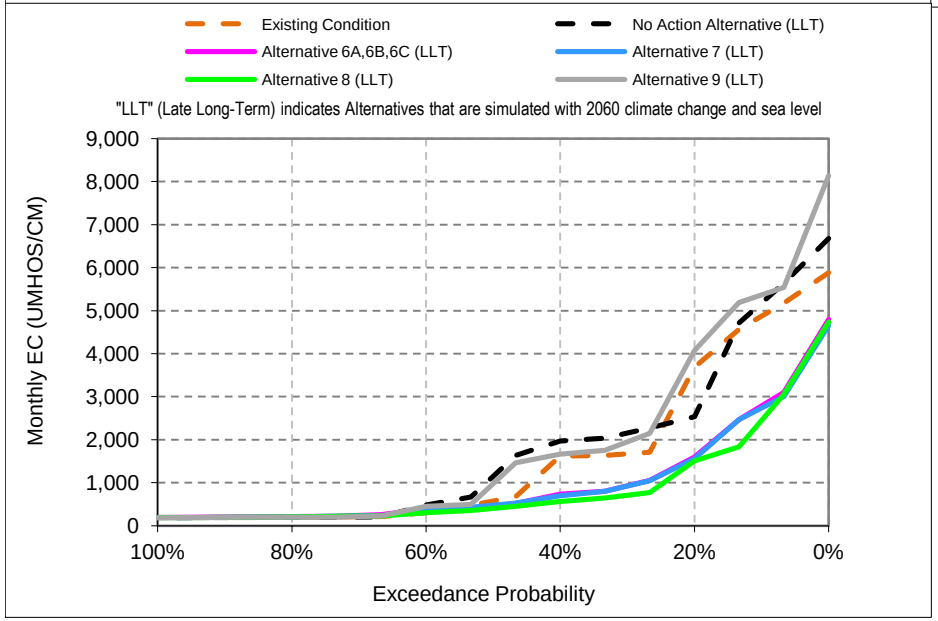
C.35. Sacramento River at Collinsville Salinity



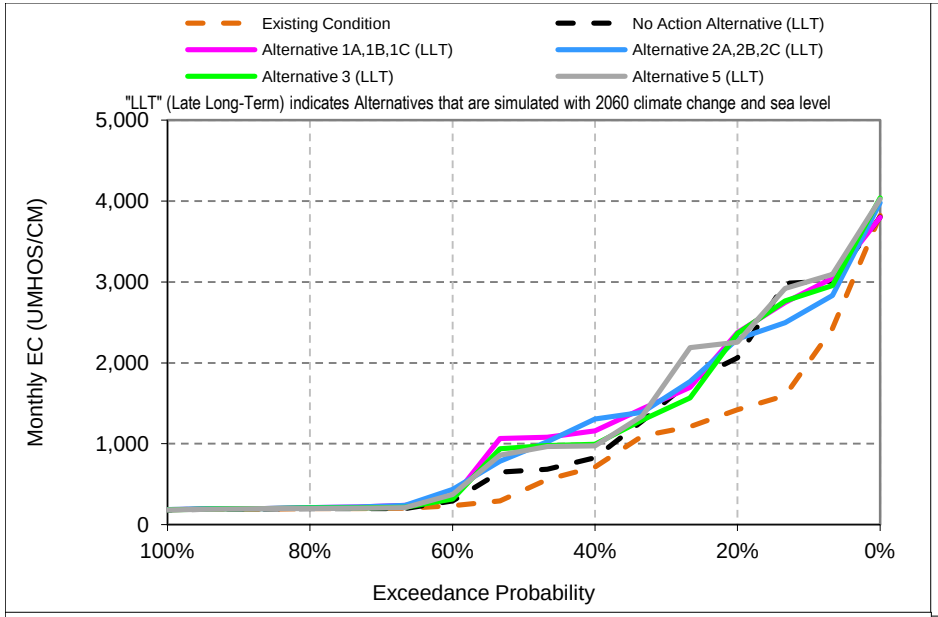


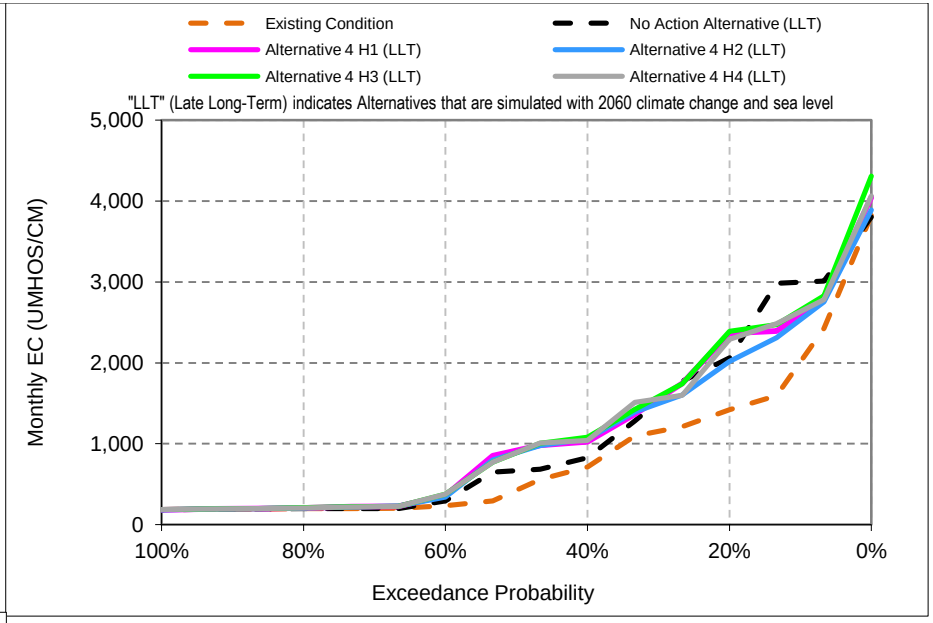


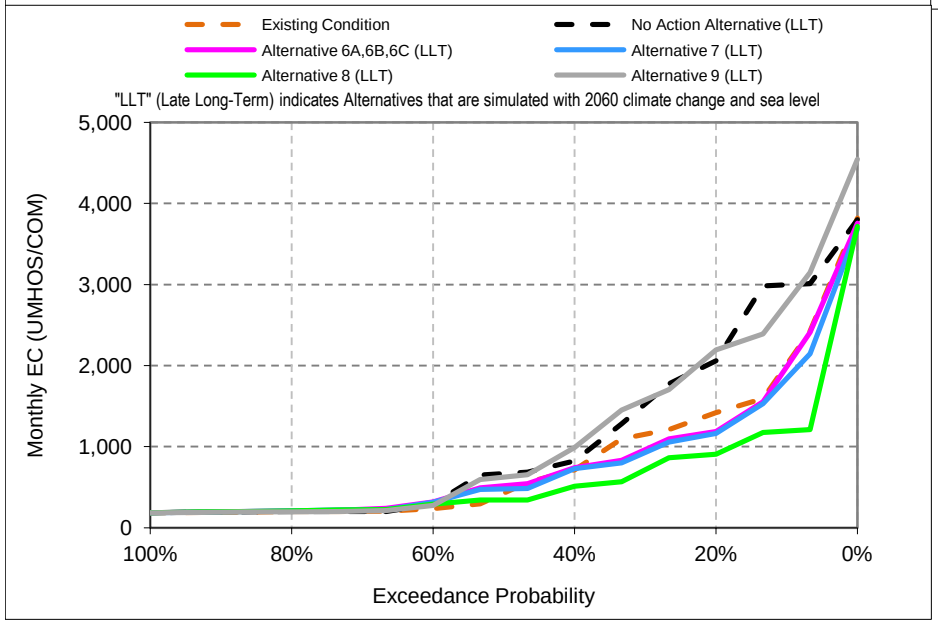
Alternative 4 Scenario Definitions:

H1 - Low Delta Outflow Scenario
H2 - Enhanced Spring Delta Outflow Scenario
H3 - Fall X2 Scenario
H4 - High Delta Outflow Scenario

Figure C-35-1. Sacramento River at Collinsville, January EC



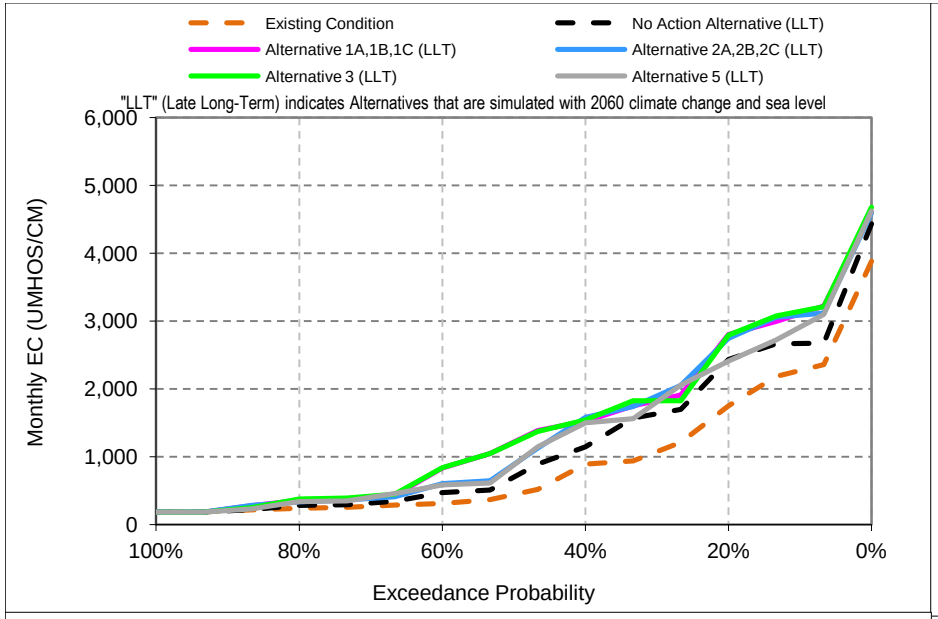


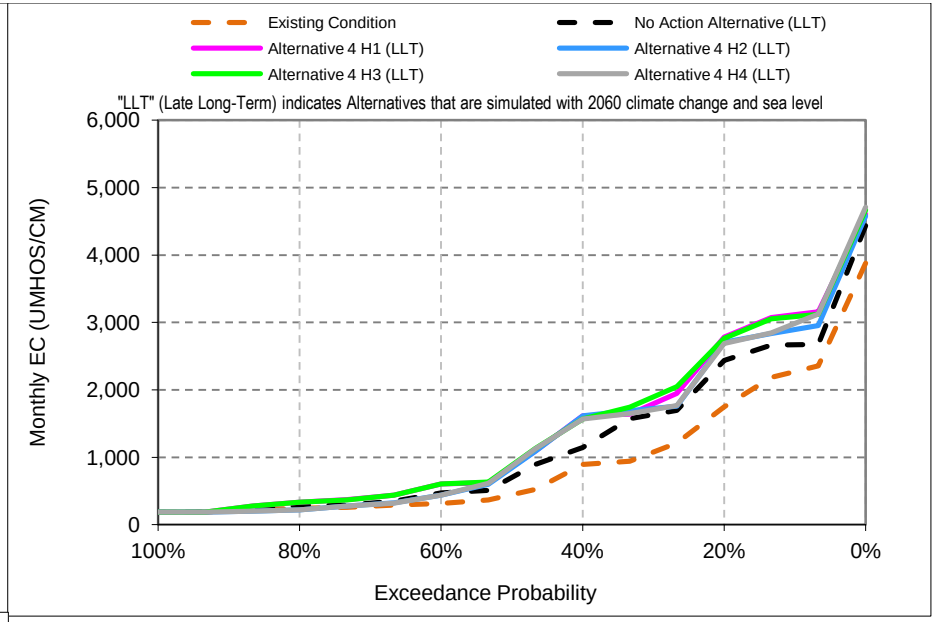


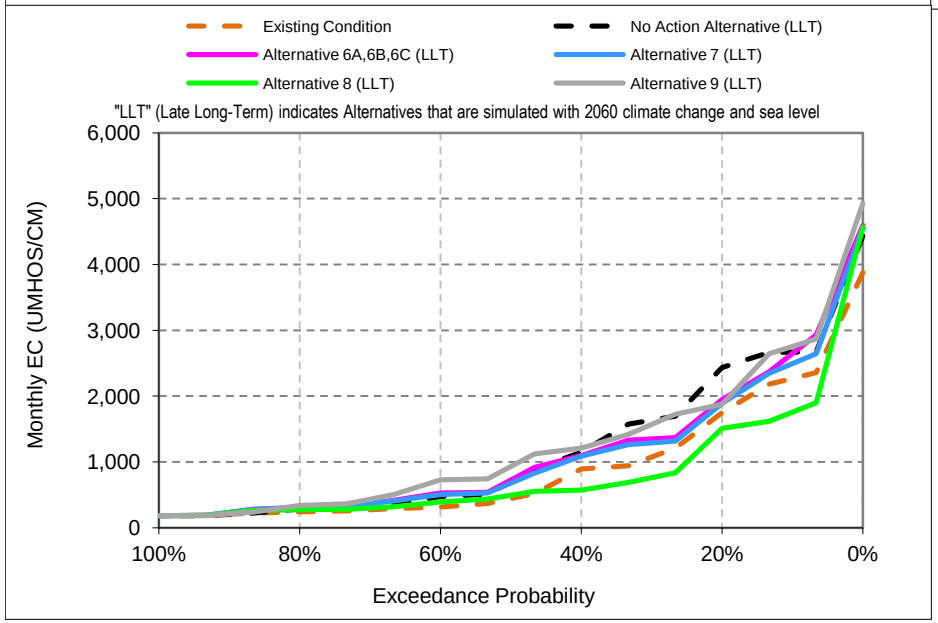
Alternative 4 Scenario Definitions:

H1 - Low Delta Outflow Scenario
H2 - Enhanced Spring Delta Outflow Scenario
H3 - Fall X2 Scenario
H4 - High Delta Outflow Scenario

Figure C-35-2. Sacramento River at Collinsville, February EC



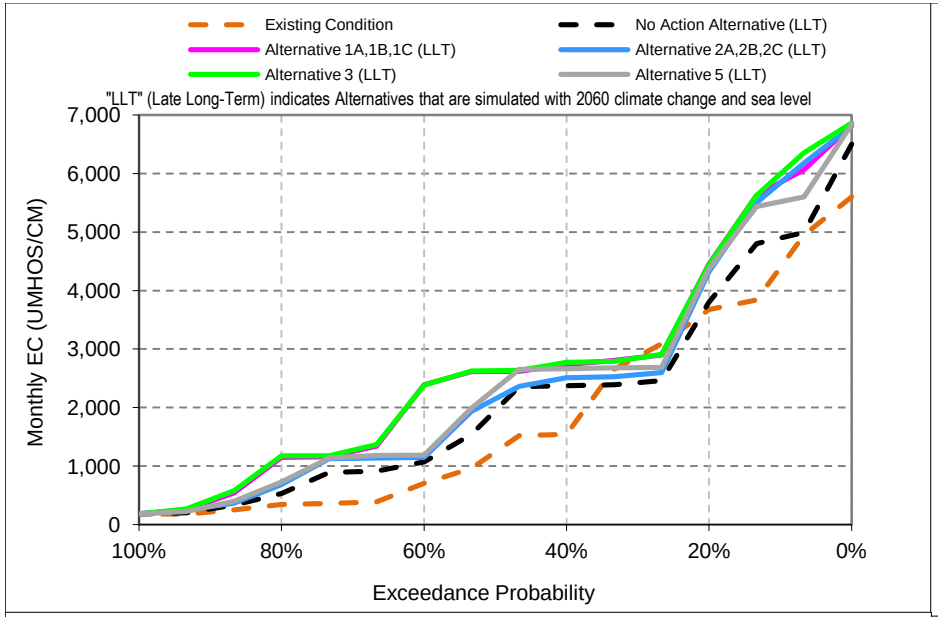


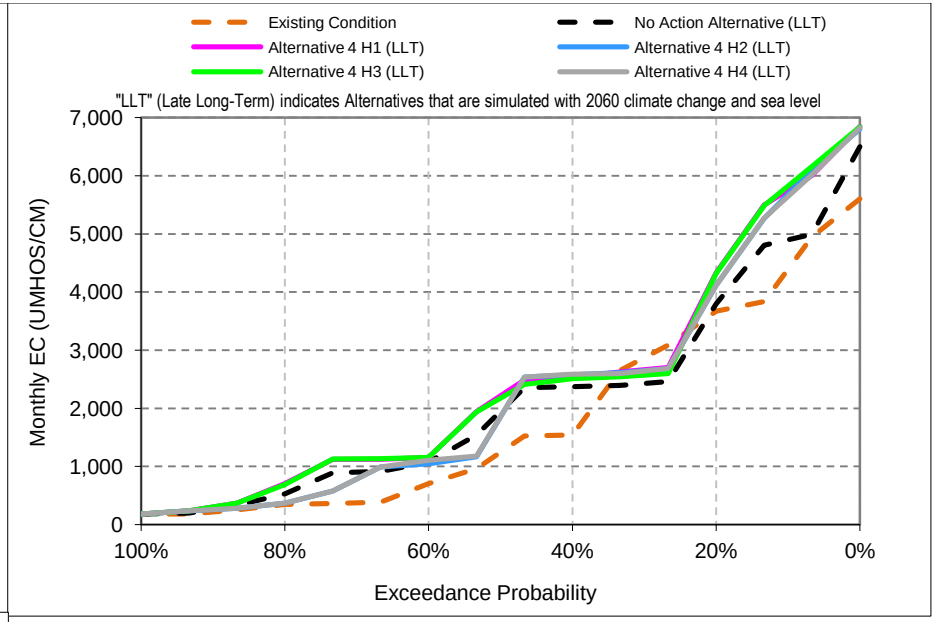


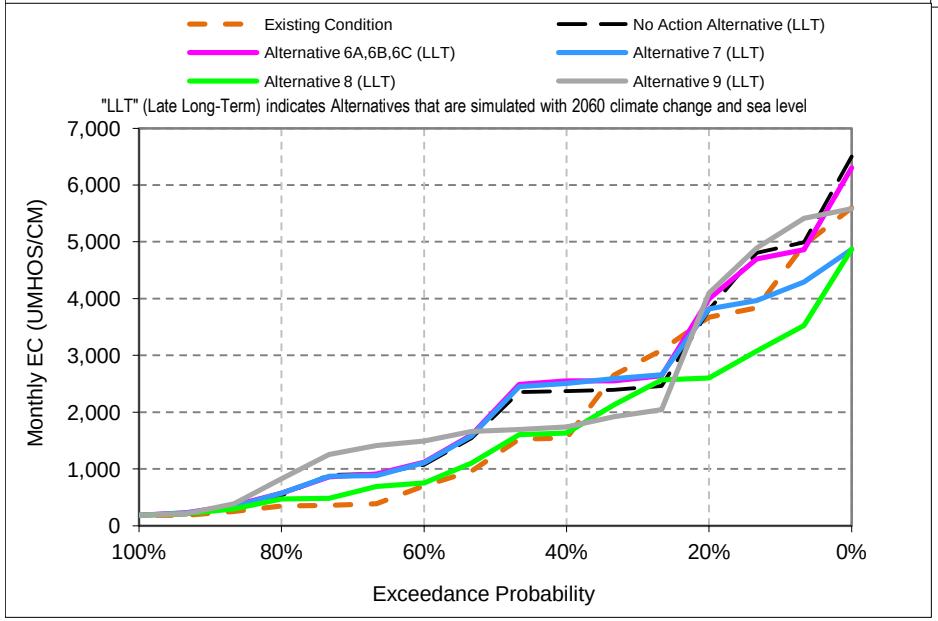
Alternative 4 Scenario Definitions:

H1 - Low Delta Outflow Scenario
H2 - Enhanced Spring Delta Outflow Scenario
H3 - Fall X2 Scenario
H4 - High Delta Outflow Scenario

Figure C-35-3. Sacramento River at Collinsville, March EC



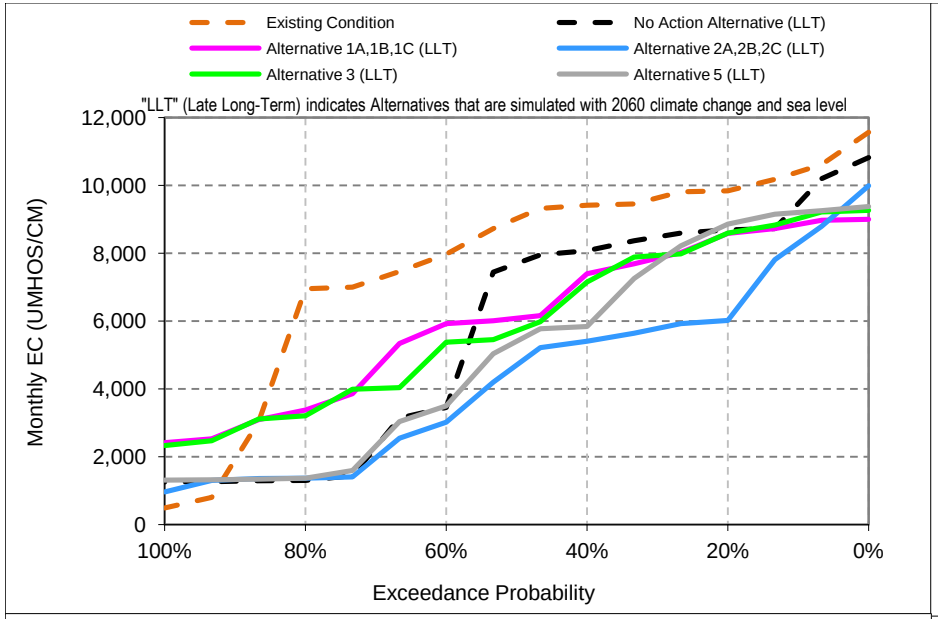


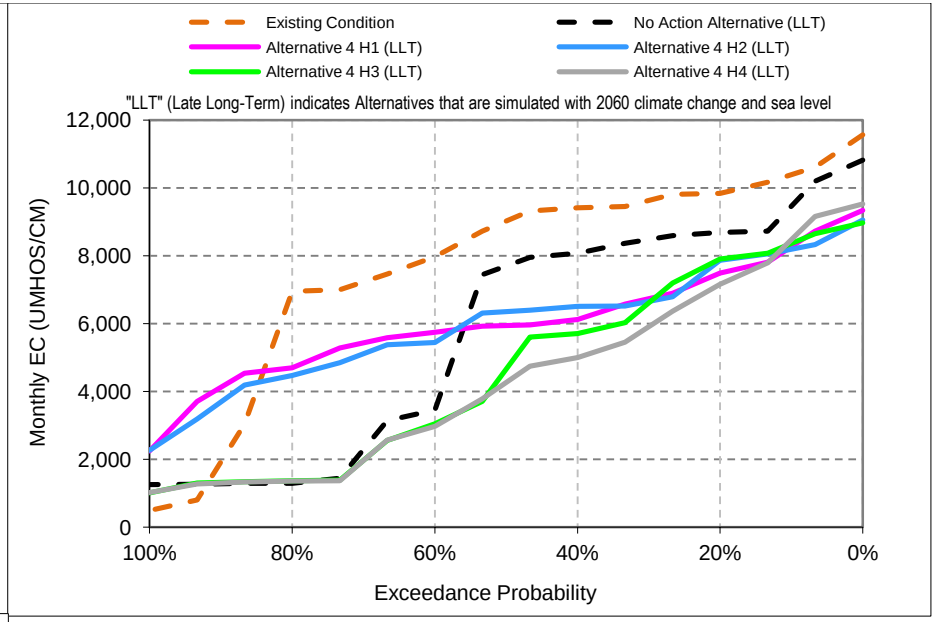


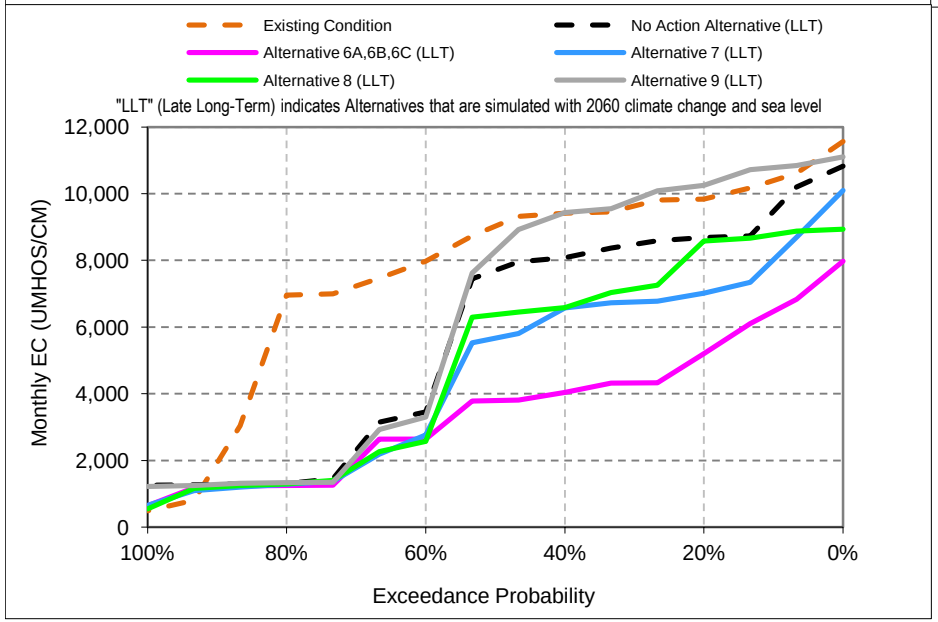
Alternative 4 Scenario Definitions:

H1 - Low Delta Outflow Scenario
H2 - Enhanced Spring Delta Outflow Scenario
H3 - Fall X2 Scenario
H4 - High Delta Outflow Scenario

Figure C-35-4. Sacramento River at Collinsville, April EC



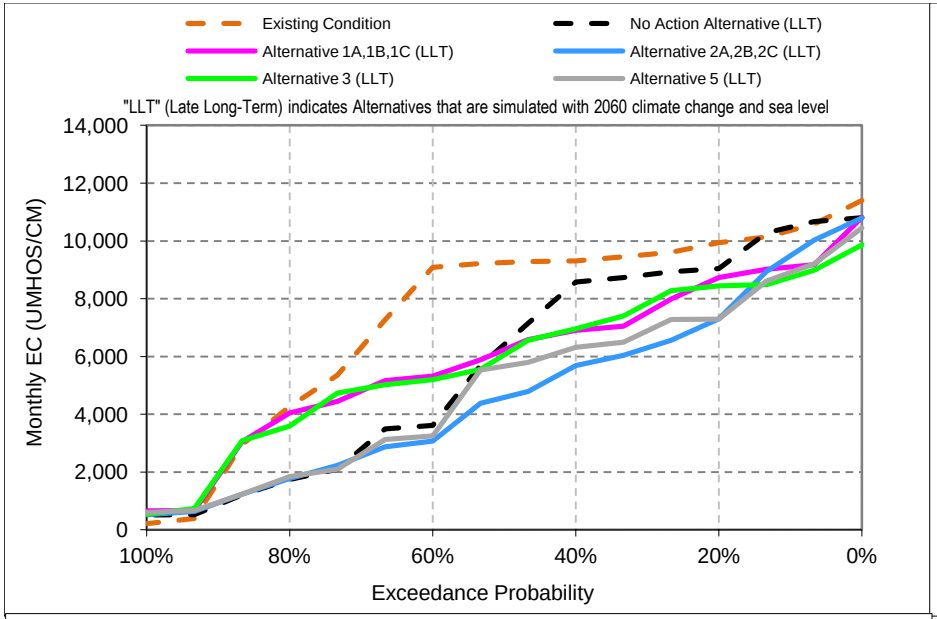


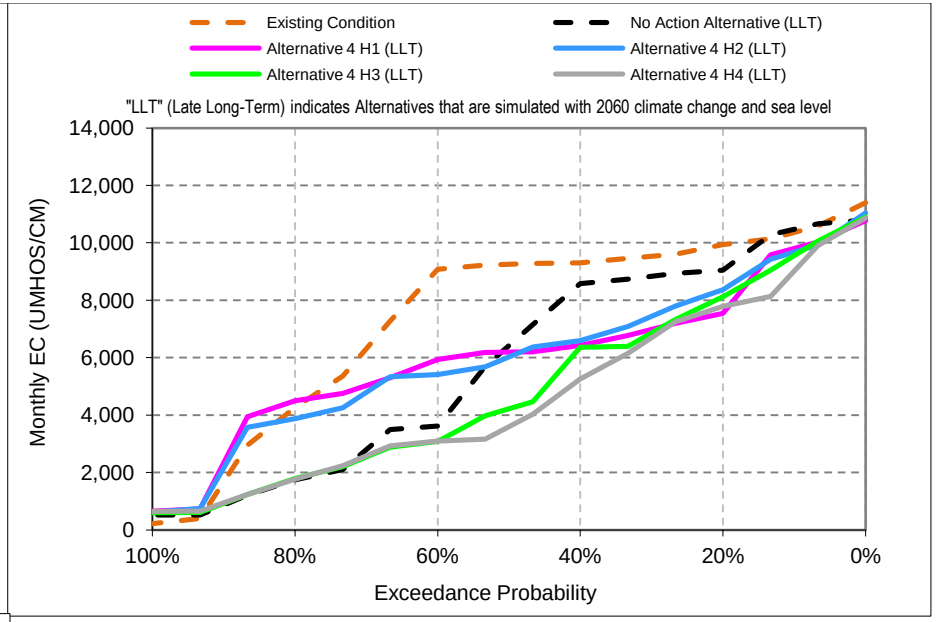


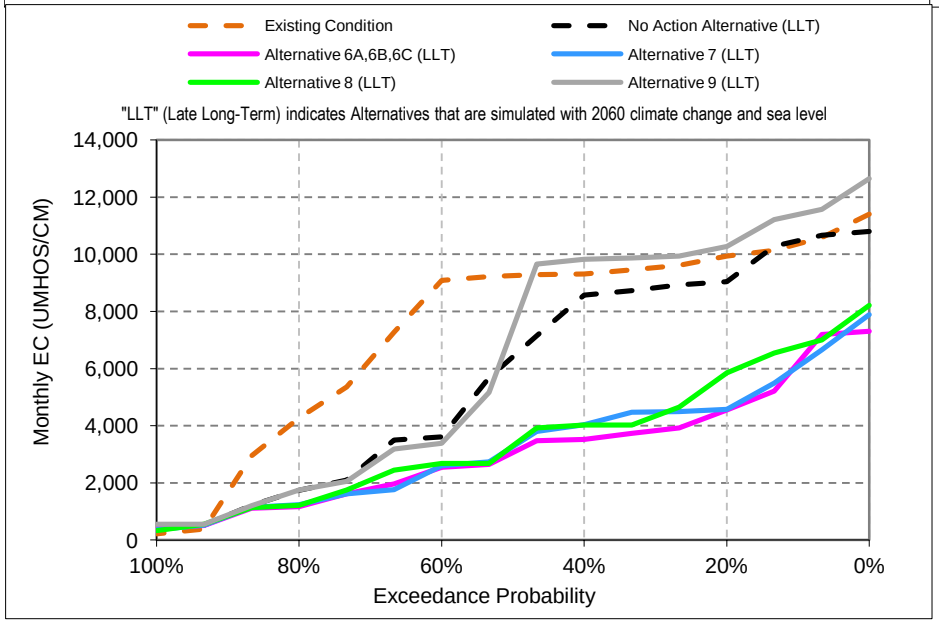
Alternative 4 Scenario Definitions:

H1 - Low Delta Outflow Scenario
H2 - Enhanced Spring Delta Outflow Scenario
H3 - Fall X2 Scenario
H4 - High Delta Outflow Scenario

Figure C-35-5. Sacramento River at Collinsville, May EC



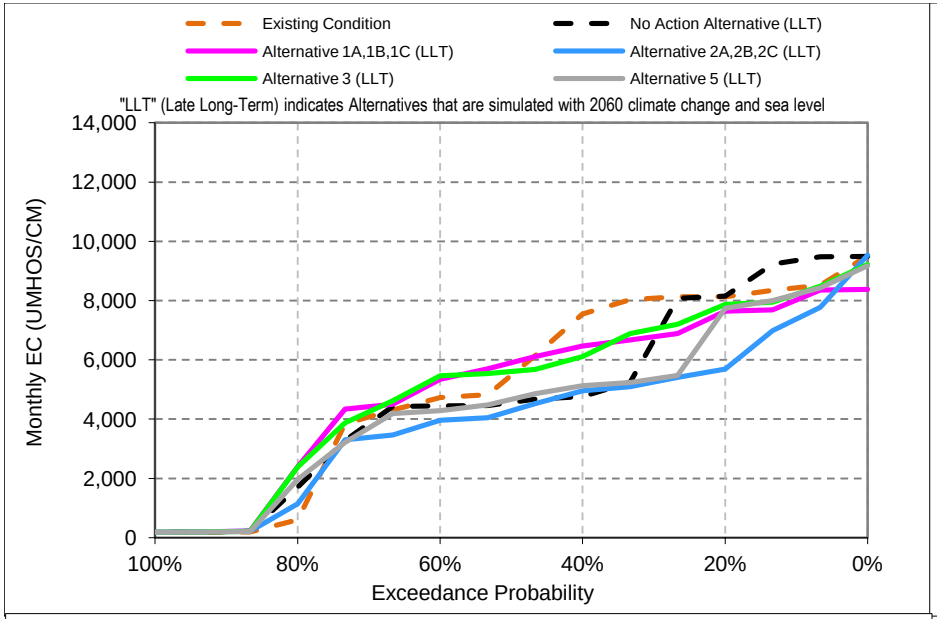


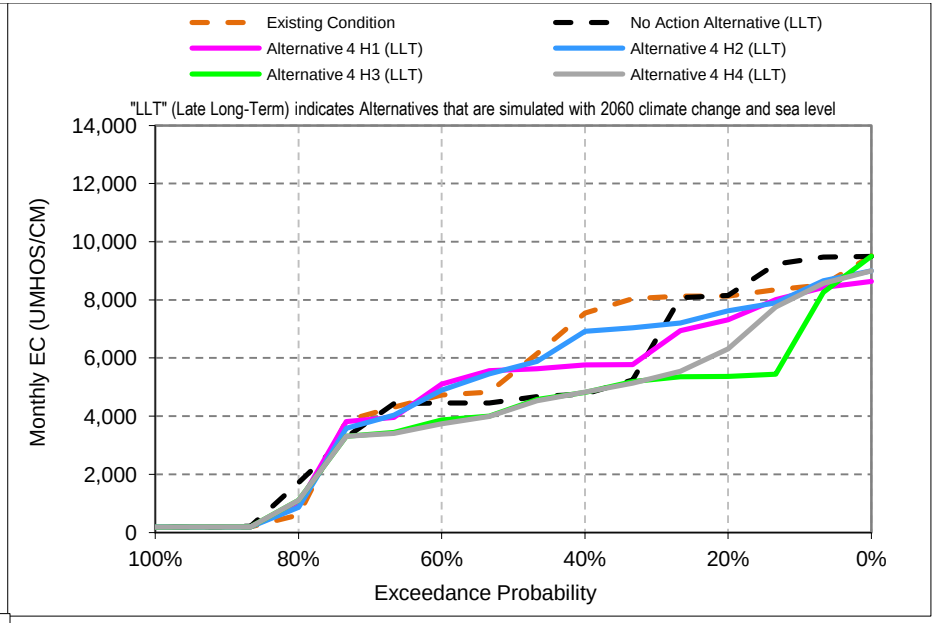


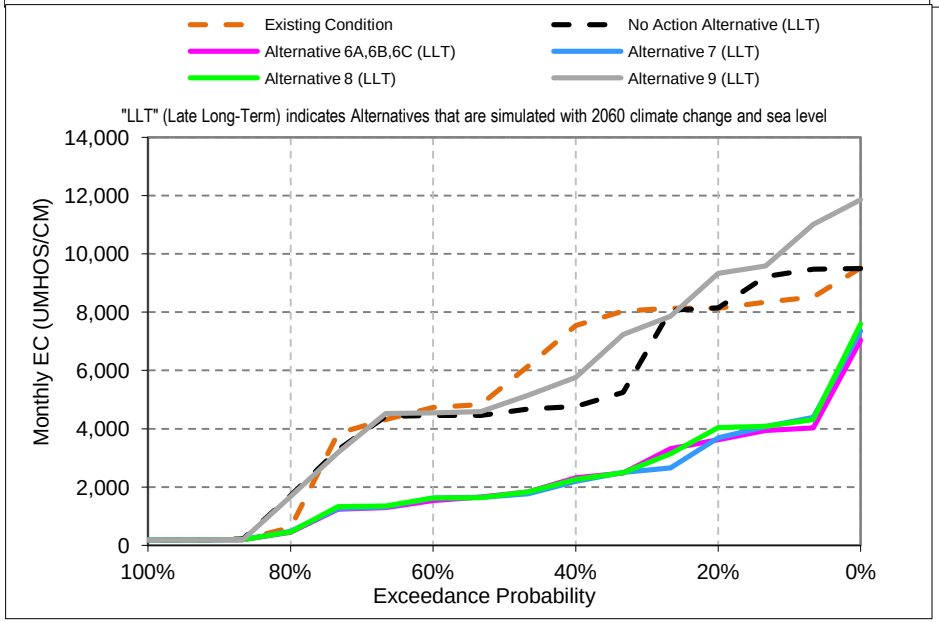
Alternative 4 Scenario Definitions:

H1 - Low Delta Outflow Scenario
H2 - Enhanced Spring Delta Outflow Scenario
H3 - Fall X2 Scenario
H4 - High Delta Outflow Scenario

Figure C-35-6. Sacramento River at Collinsville, October EC







Alternative 4 Scenario Definitions:

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

"Alternative 4 H1" represents the low delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

"Alternative 4 H3" represents the fall X2 scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

"Alternative 4 H2" represents the enchanced spring delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

"Alternative 4 H4" represents the high delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

"Alternative 4 H3" represents the fall X2 scenario of Alternative 4.

Critical (25%)	5	-78	-82	-4	-62	-23	-3	12	50	90	137	77

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

"Alternative 4 H2" represents the enchanced spring delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

"Alternative 4 H1" represents the low delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

"Alternative 4 H4" represents the high delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

"Alternative 4 H2" represents the enchanced spring delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

"Alternative 4 H2" represents the enchanced spring delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

"Alternative 4 H4" represents the high delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

"Alternative 4 H2" represents the enchanced spring delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

"Alternative 4 H4" represents the high delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

"Alternative 4 H1" represents the low delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

"Alternative 4 H3" represents the fall X2 scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

Following figures and tables include CALSIM II and DSM2 results for Existing Conditions, No Action Alternative at Early Long-Term and Alternatives 4A, 2D, and 5A at Early Long-Term

a Based on the 82-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999) calculated for current and future climate.

Positive differences highlighted in red indicate eastward movement of X2 position

"ELT" (Early Long-Term) indicates Alternatives that are simulated with 2025 climate change and sea level rise.

Dry (22%)	-89	-128	-1	-13	-5	-2	12	6	-6	-80	-180	-120	-606
Critical (15%)	-36	-65	3	23	-12	8	6	-12	-17	-193	-39	-11	-344

a Based on the 82-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Note: "ELT" (Early Long-Term) indicates Alternatives that are simulated with 2025 climate change and sea level rise.

C.52. SWP and CVP Deliveries

Table C-52-1-1. CALSIM II Summary Reporting Metrics, Long-Term Average and Dry and Critical Year Averages

					No Action Alternative (ELT)	Existing Condition	No Action Alternative (ELT) minus Existing Condition
Water Supply Reliability							
Sacramento River Hydrologic Region							
CVP Settlement	Contract Delivery (annual average)	(TAF/year)	Long Term		1,848	1,840	8
			Dry and Critical		1,807	1,823	-15
CVP Refuge Level 2	Contract Delivery (annual average)	(TAF/year)	Long Term		150	132	18
			Dry and Critical		133	115	18
CVP M&I	Contract Delivery (annual average)	(TAF/year)	Long Term		201	86	115
			Dry and Critical		161	76	85
CVP Ag	Contract Delivery (annual average - does not include Settlement contractors)	(TAF/year)	Long Term		187	234	-47
			Dry and Critical		69	128	-59
SWP FRSA	Contract Delivery (annual average)	(TAF/year)	Long Term		934	948	-14
			Dry and Critical		858	899	-41
SWP M&I	Contract Delivery (annual average)	(TAF/year)	Long Term		22	25	-3
			Dry and Critical		15	18	-3
San Joaquin River Hydrologic Region (not including Friant-Kern and Madera Canal water users)							
CVP Exchange	Contract Delivery (annual average)	(TAF/year)	Long Term		852	852	0
			Dry and Critical		814	814	0
CVP Refuge Level 2	Contract Delivery (annual average)	(TAF/year)	Long Term		260	281	-21
			Dry and Critical		246	267	-21
CVP M&I	Contract Delivery (annual average)	(TAF/year)	Long Term		15	16	-1
			Dry and Critical		12	13	-1
CVP Ag	Contract Delivery (annual average; does not include Exchange contractors)	(TAF/year)	Long Term		266	305	-39
			Dry and Critical		108	168	-60
SWP Ag	Contract Delivery (including Article 21) (annual average)	(TAF/year)	Long Term		3	4	0
			Dry and Critical		2	3	0
San Francisco Bay Hydrologic Region							
CVP M&I	Contract Delivery (annual average)	(TAF/year)	Long Term		287	226	61
			Dry and Critical		312	226	86
CVP Ag	Contract Delivery (annual average)	(TAF/year)	Long Term		32	37	-5
			Dry and Critical		13	20	-7
SWP M&I	Contract Delivery (including Article 21, includes transfers to SWP contractors) (annual average)	(TAF/year)	Long Term		195	199	-4
			Dry and Critical		137	172	-35
Central Coast Hydrologic Region							
SWP M&I	Contract Delivery (annual average)	(TAF/year)	Long Term		43	47	-4
			Dry and Critical		30	38	-9
Tulare Lake Hydrologic Region (not including Friant-Kern Canal water users)							
CVP Refuge Level 2	Contract Delivery (annual average)	(TAF/year)	Long Term		12	15	-3
			Dry and Critical		11	14	-3
CVP Ag	Contract Delivery (annual average - includes Cross Valley Canal)	(TAF/year)	Long Term		548	625	-78
			Dry and Critical		224	348	-124
SWP M&I	Contract Delivery (annual average)	(TAF/year)	Long Term		82	90	-8
			Dry and Critical		57	66	-9
SWP Ag	Contract Delivery (including Article 21) (annual average)	(TAF/year)	Long Term		644	775	-132
			Dry and Critical		440	520	-81
South Lahontan Hydrologic Region							
SWP M&I	Contract Delivery (including Article 21) (annual average)	(TAF/year)	Long Term		260	272	-12
			Dry and Critical		191	245	-54
South Coast Hydrologic Region							
SWP M&I	Contract Delivery (including Article 21, includes transfers to SWP contractors) (annual average)	(TAF/year)	Long Term		1,312	1,366	-55
			Dry and Critical		947	1,118	-171
SWP Ag	Contract Delivery (including Article 21) (annual average)	(TAF/year)	Long Term		8	9	-1
			Dry and Critical		6	6	-1
Total For All Regions							
Total Supplies	Contract Delivery (CVP, SWP and other) (annual average)	(TAF/year)	Long Term		8,162	8,385	-224
			Dry and Critical		6,593	7,099	-506

Notes:

1. Long Term is the average quantity for the period of Oct 1921 - Sep 2003.
2. Dry and Critical Years Average is the average quantity for the combination of the SWRCB D-1641 40-30-30 Dry and Critical years for the period of Oct 1921 - Sep 2003.
3. "ELT" (Early Long-Term) indicates Alternatives that are simulated with 2025 climate change and sea level rise.

Table C-52-1-2. CALSIM II Summary Reporting Metrics, Long-Term Average and Dry and Critical Year Averages

					No Action Alternative (ELT)	Existing Condition	No Action Alternative (ELT) minus Existing Condition
Water Supply Reliability							
North of Delta							
CVP Ag	Contract Delivery (annual average; does not include Exchange contractors)	(TAF/year)	Long Term		187	234	-47
			Dry and Critical		69	128	-59
CVP M&I	Contract Delivery (annual average)	(TAF/year)	Long Term		391	210	181
			Dry and Critical		393	214	179
SWP Ag	Contract Delivery (including Article 21) (annual average)	(TAF/year)	Long Term		0	0	0
			Dry and Critical		0	0	0

SWP Ag	Contract Delivery (including Article 21) (annual average)	(TAF/year)	Long Term		745	789	-44
			Dry and Critical		438	529	-91
SWP M&I	Contract Delivery (including Article 21, includes transfers to SWP contractors) (annual average)	(TAF/year)	Long Term		1,931	1,919	12
			Dry and Critical		1,286	1,590	-304
Total CVP South of Delta							
Total CVP Ag and M&I SOD	Contract Delivery (CVP) (annual average)	(TAF/year)	Long Term		945	1,085	-140
			Dry and Critical		433	637	-204
Total SWP South of Delta							
Total SWP Ag and M&I SOD	Contract Delivery (SWP) (annual average)	(TAF/year)	Long Term		2,675	2,707	-32
			Dry and Critical		1,725	2,119	-395
Total South of Delta							
Total South of Delta Ag and M&I Deliveries	Contract Delivery (CVP, SWP and other) (annual average)	(TAF/year)	Long Term		3,621	3,792	-172
			Dry and Critical		2,158	2,757	-599

Notes:

1. Long Term is the average quantity for the period of Oct 1921 - Sep 2003.
2. Dry and Critical Years Average is the average quantity for the combination of the SWRCB D-1641 40-30-30 Dry and Critical years for the period of Oct 1921 - Sep 2003.
3. "ELT" (Early Long-Term) indicates Alternatives that are simulated with 2025 climate change and sea level rise.

Table C-52-4-1. CALSIM II Summary Reporting Metrics, Long-Term Average and Dry and Critical Year Averages

					Alternative 5A (ELT)	Existing Condition	Alternative 5A (ELT) minus Existing Condition
Water Supply Reliability							
Sacramento River Hydrologic Region							
CVP Settlement	Contract Delivery (annual average)	(TAF/year)	Long Term		1,851	1,840	11
			Dry and Critical		1,818	1,823	-4
CVP Refuge Level 2	Contract Delivery (annual average)	(TAF/year)	Long Term		154	132	22
			Dry and Critical		134	115	19
CVP M&I	Contract Delivery (annual average)	(TAF/year)	Long Term		203	86	117
			Dry and Critical		164	76	88
CVP Ag	Contract Delivery (annual average - does not include Settlement contractors)	(TAF/year)	Long Term		190	234	-43
			Dry and Critical		77	128	-51
SWP FRSA	Contract Delivery (annual average)	(TAF/year)	Long Term		935	948	-13
			Dry and Critical		861	899	-38
SWP M&I	Contract Delivery (annual average)	(TAF/year)	Long Term		24	25	0
			Dry and Critical		14	18	-3
San Joaquin River Hydrologic Region (not including Friant-Kern and Madera Canal water users)							
CVP Exchange	Contract Delivery (annual average)	(TAF/year)	Long Term		852	852	0
			Dry and Critical		814	814	0
CVP Refuge Level 2	Contract Delivery (annual average)	(TAF/year)	Long Term		261	281	-20
			Dry and Critical		248	267	-19
CVP M&I	Contract Delivery (annual average)	(TAF/year)	Long Term		16	16	0
			Dry and Critical		13	13	-1
CVP Ag	Contract Delivery (annual average; does not include Exchange contractors)	(TAF/year)	Long Term		302	305	-3
			Dry and Critical		129	168	-39
SWP Ag	Contract Delivery (including Article 21) (annual average)	(TAF/year)	Long Term		4	4	0
			Dry and Critical		2	3	-1
San Francisco Bay Hydrologic Region							
CVP M&I	Contract Delivery (annual average)	(TAF/year)	Long Term		291	226	64
			Dry and Critical		315	226	89
CVP Ag	Contract Delivery (annual average)	(TAF/year)	Long Term		37	37	0
			Dry and Critical		16	20	-4
SWP M&I	Contract Delivery (including Article 21, includes transfers to SWP contractors) (annual average)	(TAF/year)	Long Term		217	199	18
			Dry and Critical		133	172	-39
Central Coast Hydrologic Region							
SWP M&I	Contract Delivery (annual average)	(TAF/year)	Long Term		48	47	1
			Dry and Critical		29	38	-10
Tulare Lake Hydrologic Region (not including Friant-Kern Canal water users)							
CVP Refuge Level 2	Contract Delivery (annual average)	(TAF/year)	Long Term		12	15	-3
			Dry and Critical		11	14	-3
CVP Ag	Contract Delivery (annual average - includes Cross Valley Canal)	(TAF/year)	Long Term		627	625	2
			Dry and Critical		267	348	-82
SWP M&I	Contract Delivery (annual average)	(TAF/year)	Long Term		91	90	1
			Dry and Critical		55	66	-11
SWP Ag	Contract Delivery (including Article 21) (annual average)	(TAF/year)	Long Term		763	775	-12
			Dry and Critical		423	520	-97
South Lahontan Hydrologic Region							
SWP M&I	Contract Delivery (including Article 21) (annual average)	(TAF/year)	Long Term		283	272	11
			Dry and Critical		185	245	-60
South Coast Hydrologic Region							
SWP M&I	Contract Delivery (including Article 21, includes transfers to SWP contractors) (annual average)	(TAF/year)	Long Term		1,436	1,366	69
			Dry and Critical		930	1,118	-188
SWP Ag	Contract Delivery (including Article 21) (annual average)	(TAF/year)	Long Term		9	9	0
			Dry and Critical		5	6	-1
Total For All Regions							
Total Supplies	Contract Delivery (CVP, SWP and other) (annual average)	(TAF/year)	Long Term		8,606	8,385	221
			Dry and Critical		6,644	7,099	-454

Notes:

1. Long Term is the average quantity for the period of Oct 1921 - Sep 2003.
2. Dry and Critical Years Average is the average quantity for the combination of the SWRCB D-1641 40-30-30 Dry and Critical years for the period of Oct 1921 - Sep 2003.
3. "ELT" (Early Long-Term) indicates Alternatives that are simulated with 2025 climate change and sea level rise.

Table C-52-4-2. CALSIM II Summary Reporting Metrics, Long-Term Average and Dry and Critical Year Averages

					Alternative 5A (ELT)	Existing Condition	Alternative 5A (ELT) minus Existing Condition
Water Supply Reliability							
North of Delta

			Dry and Critical		1,286	1,320	-33
Total CVP South of Delta							
Total CVP Ag and M&I SOD	Contract Delivery (CVP) (annual average)	(TAF/year)	Long Term		945	958	-13
			Dry and Critical		433	437	-4
Total SWP South of Delta							
Total SWP Ag and M&I SOD	Contract Delivery (SWP) (annual average)	(TAF/year)	Long Term		2,675	2,489	186
			Dry and Critical		1,725	1,767	-42
Total South of Delta							
Total South of Delta Ag and M&I Deliveries	Contract Delivery (CVP, SWP and other) (annual average)	(TAF/year)	Long Term		3,621	3,448	173
			Dry and Critical		2,158	2,204	-46

Notes:

1. Long Term is the average quantity for the period of Oct 1921 - Sep 2003.
2. Dry and Critical Years Average is the average quantity for the combination of the SWRCB D-1641 40-30-30 Dry and Critical years for the period of Oct 1921 - Sep 2003.
3. "ELT" (Early Long-Term) indicates Alternatives that are simulated with 2025 climate change and sea level rise.

Table C-52-7-1. CALSIM II Summary Reporting Metrics, Long-Term Average and Dry and Critical Year Averages

					Alternative 5A (ELT)	No Action Alternative (ELT)	Alternative 5A (ELT) minus No Action Alternative (ELT)
Water Supply Reliability							
Sacramento River Hydrologic Region							
CVP Settlement	Contract Delivery (annual average)	(TAF/year)	Long Term		1,851	1,848	3
			Dry and Critical		1,818	1,807	11
CVP Refuge Level 2	Contract Delivery (annual average)	(TAF/year)	Long Term		154	150	4
			Dry and Critical		134	133	1
CVP M&I	Contract Delivery (annual average)	(TAF/year)	Long Term		203	201	1
			Dry and Critical		164	161	3
CVP Ag	Contract Delivery (annual average - does not include Settlement contractors)	(TAF/year)	Long Term		190	187	4
			Dry and Critical		77	69	9
SWP FRSA	Contract Delivery (annual average)	(TAF/year)	Long Term		935	934	1
			Dry and Critical		861	858	3
SWP M&I	Contract Delivery (annual average)	(TAF/year)	Long Term		24	22	2
			Dry and Critical		14	15	-1
San Joaquin River Hydrologic Region (not including Friant-Kern and Madera Canal water users)							
CVP Exchange	Contract Delivery (annual average)	(TAF/year)	Long Term		852	852	0
			Dry and Critical		814	814	0
CVP Refuge Level 2	Contract Delivery (annual average)	(TAF/year)	Long Term		261	260	1
			Dry and Critical		248	246	2
CVP M&I	Contract Delivery (annual average)	(TAF/year)	Long Term		16	15	1
			Dry and Critical		13	12	1
CVP Ag	Contract Delivery (annual average; does not include Exchange contractors)	(TAF/year)	Long Term		302	266	36
			Dry and Critical		129	108	21
SWP Ag	Contract Delivery (including Article 21) (annual average)	(TAF/year)	Long Term		4	3	0
			Dry and Critical		2	2	0
San Francisco Bay Hydrologic Region							
CVP M&I	Contract Delivery (annual average)	(TAF/year)	Long Term		291	287	4
			Dry and Critical		315	312	3
CVP Ag	Contract Delivery (annual average)	(TAF/year)	Long Term		37	32	5
			Dry and Critical		16	13	3
SWP M&I	Contract Delivery (including Article 21, includes transfers to SWP contractors) (annual average)	(TAF/year)	Long Term		217	195	22
			Dry and Critical		133	137	-4
Central Coast Hydrologic Region							
SWP M&I	Contract Delivery (annual average)	(TAF/year)	Long Term		48	43	5
			Dry and Critical		29	30	-1
Tulare Lake Hydrologic Region (not including Friant-Kern Canal water users)							
CVP Refuge Level 2	Contract Delivery (annual average)	(TAF/year)	Long Term		12	12	0
			Dry and Critical		11	11	0
CVP Ag	Contract Delivery (annual average - includes Cross Valley Canal)	(TAF/year)	Long Term		627	548	79
			Dry and Critical		267	224	43
SWP M&I	Contract Delivery (annual average)	(TAF/year)	Long Term		91	82	9
			Dry and Critical		55	57	-2
SWP Ag	Contract Delivery (including Article 21) (annual average)	(TAF/year)	Long Term		763	644	120
			Dry and Critical		423	440	-17
South Lahontan Hydrologic Region							
SWP M&I	Contract Delivery (including Article 21) (annual average)	(TAF/year)	Long Term		283	260	23
			Dry and Critical		185	191	-6
South Coast Hydrologic Region							
SWP M&I	Contract Delivery (including Article 21, includes transfers to SWP contractors) (annual average)	(TAF/year)	Long Term		1,436	1,312	124
			Dry and Critical		930	947	-17
SWP Ag	Contract Delivery (including Article 21) (annual average)	(TAF/year)	Long Term		9	8	1
			Dry and Critical		5	6	0
Total For All Regions							
Total Supplies	Contract Delivery (CVP, SWP and other) (annual average)	(TAF/year)	Long Term		8,606	8,162	444
			Dry and Critical		6,644	6,593	52

Notes:

1. Long Term is the average quantity for the period of Oct 1921 - Sep 2003.
2. Dry and Critical Years Average is the average quantity for the combination of the SWRCB D-1641 40-30-30 Dry and Critical years for the period of Oct 1921 - Sep 2003.
3. "ELT" (Early Long-Term) indicates Alternatives that are simulated with 2025 climate change and sea level rise.

Table C-52-7-2. CALSIM II Summary Reporting Metrics, Long-Term Average and Dry and Critical Year Averages

					Alternative 5A (ELT)	No Action Alternative (ELT)	Alternative 5A (ELT) minus No Action Alternative (ELT)
Water Supply Reliability

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

The Elevations are based on National Geodetic Vertical Datum of 1929 (NGVD 29)

"ELT" (Early Long-Term) indicates Alternatives that are simulated with 2025 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"ELT" (Early Long-Term) indicates Alternatives that are simulated with 2025 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"ELT" (Early Long-Term) indicates Alternatives that are simulated with 2025 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"ELT" (Early Long-Term) indicates Alternatives that are simulated with 2025 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"ELT" (Early Long-Term) indicates Alternatives that are simulated with 2025 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"ELT" (Early Long-Term) indicates Alternatives that are simulated with 2025 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"ELT" (Early Long-Term) indicates Alternatives that are simulated with 2025 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"ELT" (Early Long-Term) indicates Alternatives that are simulated with 2025 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"ELT" (Early Long-Term) indicates Alternatives that are simulated with 2025 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"ELT" (Early Long-Term) indicates Alternatives that are simulated with 2025 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"ELT" (Early Long-Term) indicates Alternatives that are simulated with 2025 climate change and sea level rise.
