

RECIRC Ltr#	Cmt#	Comment	Response
1600	1	<p>Instead of serving the interests of large-scale industrial agriculture operations by passing Alternative 4A, I encourage the State of California to focus its efforts on making our agricultural systems more efficient (e.g. reducing animal agriculture).</p> <p>Addressing the underlying problem, rather than patchwork band-aid treatments of the symptoms, is the only way forward.</p>	<p>This comment letter is in part a form letter that has been submitted by many commenters. To locate the response to the form letter portion of the comment, please refer to the index of commenters in Chapter 4 of Volume II of the Final EIR/EIS, and cross reference the Form Master letter number shown there with the index of Form Masters also provided in Chapter 4 of Volume II of the Final EIR/EIS. The text below responds to the specific substantive portions of the comment letter that were submitted by the commenter.</p> <p>The issue of crops and water use is beyond the scope of the Proposed Project. The comment does not raise any environmental issue related to the 2015 RDEIR/SDEIS or the 2013 DEIR/EIS.</p>
1601	1	<p>The environment is already suffering due to adverse impacts of human activities. This is the same environment that we depend on to sustain us. People are the underlying problem; the environment cannot sustain our numbers, growth rates and lifestyles. Engineered solutions only encourage more people to use increasing amounts of water. Say no to the proposed tunnels.</p>	<p>This comment letter is in part a form letter that has been submitted by many commenters. To locate the response to the form letter portion of the comment, please refer to the index of commenters in Chapter 4 of Volume II of the Final EIR/EIS, and cross reference the Form Master letter number shown there with the index of Form Masters also provided in Chapter 4 of Volume II of the Final EIR/EIS. The text below responds to the specific substantive portions of the comment letter that were submitted by the commenter.</p> <p>Since the late 1800s, the Bay-Delta ecosystem has been substantially altered. Changes in key environmental attributes of the Bay-Delta have contributed to the current degraded state of the ecosystem and appear to be proximate causes of declines in desired fishes and increases in non-native species. California WaterFix is not intended to address all the factors that have contributed to the Delta's decline and briefly summarizes a few but not all of those factors. Many factors that have contributed to the decline of the Delta's ecosystem including the conversion of tidal marsh and floodplains to farmland, construction of levees and altering of tide flows, in-Delta and upstream water diversions, contaminant discharges, ammonia and nutrient discharges and changes to the food web, increases in water temperatures, and introduction of non-native and invasive species. The Delta will remain in a highly altered state for the foreseeable future and the project is not intended to address all the past harms or restore the Delta to a pre-altered state.</p> <p>DWR's fundamental purpose of the proposed project is to make physical and operational improvements to the SWP system in the Delta necessary to restore and protect ecosystem health, water supplies of the SWP and CVP south of the Delta, and water quality within a stable regulatory framework, consistent with statutory and contractual obligations.</p> <p>By establishing a point of water diversion in the north Delta and new operating criteria to improve water volume, timing, and salinity, the proposed project is designed to improve native fish migratory patterns and allow for greater operational flexibility. It is important to note, that the proposed project is not intended to serve as a state-wide solution to all of California's water problems and it is not an attempt to address directly the need for continued investment by the State and other public agencies in conservation, recycling, desalination, treatment of contaminated aquifers, or other measures to expand supply and storage. Nor is the proposed project intended to solve all environmental challenges facing the Delta. Please see Master Response 6 (Demand Management) for further information regarding how many of the suggested components have merit from a state-wide water policy standpoint, and some are being implemented or considered independently throughout the state, but are beyond the scope of the proposed project.</p> <p>The project would help to address the resilience and adaptability of the Delta to climate change through water delivery facilities combined with a range of operational flexibility. In addition to the added water management flexibility created by new water diversions and operational scenarios, the project would improve habitat, increase food supplies and reduce the effects of other stressors on the Delta ecosystem.</p> <p>Although many of the proposed alternatives included meritorious water policy principles, the proposals rejected by the Lead Agencies did not qualify as appropriate alternatives for various reasons. For example, proposals were rejected because they were inconsistent with the project's objectives and purpose and need or included components that are beyond the scope of the project. The text of the Draft EIR/EIS in Chapter 3 (section 3.2) and Appendix 3A to that document thoroughly explain the process used to develop the</p>

RECIRC Ltr#	Cmt#	Comment	Response
			<p>alternatives, and explain why certain potential alternatives were considered but ultimately rejected by the Lead Agencies.</p> <p>Please refer to Master Response 4 (Alternatives), Master Response 34 (Delta Reform Act), and Master Response 3 (Purpose and Need).</p>
1602	1	<p>The tunnels would divert massive amounts of water, greatly reducing Sacramento River flows, the main source of fresh water for the Delta and San Francisco Bay. Most of this water would be diverted for industrial-scale agriculture, including extremely water-intensive almond and pistachio orchards. This is irresponsible water management.</p>	<p>This comment letter is in part a form letter that has been submitted by many commenters. To locate the response to the form letter portion of the comment, please refer to the index of commenters in Chapter 4 of Volume II of the Final EIR/EIS, and cross reference the Form Master letter number shown there with the index of Form Masters also provided in Chapter 4 of Volume II of the Final EIR/EIS. The text below responds to the specific substantive portions of the comment letter that were submitted by the commenter.</p> <p>No issues related to the adequacy of the environmental impact analysis in the EIR/S were raised. All of the alternatives evaluated in the EIR/EIS would only divert water under existing water rights that were issued to DWR and Reclamation by the State Water Board with consideration for senior water rights and Area of Origin laws and requirements. Senior water rights holders are not affected by implementation of action alternatives. The amount of water that DWR and Reclamation would be able to pump from the proposed north Delta facilities is set by Federal regulating agencies, ESA compliance and project design, and not by the water contractors. Operations for the proposed project would still be consistent with the criteria set by the U.S. Fish and Wildlife Service and National Marine Fisheries Service biological opinions and State Water Resources Control Board Water Right Decision 1641 (D-1641), subject to adjustments made pursuant to the adaptive management process, as described in Chapter 5, Water Supply of the EIR/S.</p> <p>The issue of crops and water use is beyond the scope of the Proposed Project. For more information please refer to the updated draft 2013 California Water Plan's strategy for agricultural water use efficiency, which describes the use and application of scientific processes to control agricultural water delivery and use. Also, refer to Master Response 6 and Appendix 1C for further information on demand management measures, including increasing agricultural water use efficiency and conservation.</p>
1603	1	<p>I am complete against pistachios and almonds simply because they use so much water. They should be grown in states where water is plentiful. Or not at all.</p>	<p>This comment letter is in part a form letter that has been submitted by many commenters. To locate the response to the form letter portion of the comment, please refer to the index of commenters in Chapter 4 of Volume II of the Final EIR/EIS, and cross reference the Form Master letter number shown there with the index of Form Masters also provided in Chapter 4 of Volume II of the Final EIR/EIS. The text below responds to the specific substantive portions of the comment letter that were submitted by the commenter.</p> <p>State constitutional restrictions require the reasonable and beneficial use of water and state law requires that water supplied from the Delta be put to beneficial uses. The Lead Agencies do not have the authority to designate what water deliveries are used for. Please refer to Master Response 34 regarding the potential uses of water delivered via proposed conveyance facilities.</p>
1604	1	<p>Please let us not sacrifice this fragile ecosystem and our wildlife to the needs of water intensive crops and big agriculture.</p>	<p>This comment letter is in part a form letter that has been submitted by many commenters. To locate the response to the form letter portion of the comment, please refer to the index of commenters in Chapter 4 of Volume II of the Final EIR/EIS, and cross reference the Form Master letter number shown there with the index of Form Masters also provided in Chapter 4 of Volume II of the Final EIR/EIS. The text below responds to the specific substantive portions of the comment letter that were submitted by the commenter.</p> <p>The California WaterFix project is being proposed to address the conflict between the ecological needs of a range of at-risk Delta species and natural communities, while providing for more reliable water supplies for people, communities, agriculture, and industry. State constitutional restrictions require the reasonable and beneficial use of water and state law requires that water supplied from the Delta be put to beneficial uses. The Lead Agencies do not have the authority to designate what water deliveries are used for. Please refer to</p>

RECIRC Ltr#	Cmt#	Comment	Response
			Master Response 34 regarding the potential uses of water delivered via proposed conveyance facilities.
1605	1	We must vigilantly support endangered species, particularly salmon. The Delta is a key breeding ground for many endangered species of fish.	<p>This comment letter is in part a form letter that has been submitted by many commenters. To locate the response to the form letter portion of the comment, please refer to the index of commenters in Chapter 4 of Volume II of the Final EIR/EIS, and cross reference the Form Master letter number shown there with the index of Form Masters also provided in Chapter 4 of Volume II of the Final EIR/EIS. The text below responds to the specific substantive portions of the comment letter that were submitted by the commenter.</p> <p>The comment does not raise any environmental issue related to the 2015 RDEIR/SDEIS or the 2013 DEIR/EIS.</p>
1606	1	Despite four years of drought we still do not seem to be clear on the concept of protecting our water resources. We cannot drain the Delta. We must stop building in Southern California, especially the Coachella Valley and other arid [regions]. We must protect Northern California's resources and stop providing water to water-demanding crops or all of California will be destroyed.	<p>This comment letter is in part a form letter that has been submitted by many commenters. To locate the response to the form letter portion of the comment, please refer to the index of commenters in Chapter 4 of Volume II of the Final EIR/EIS, and cross reference the Form Master letter number shown there with the index of Form Masters also provided in Chapter 4 of Volume II of the Final EIR/EIS. The text below responds to the specific substantive portions of the comment letter that were submitted by the commenter.</p> <p>The preferred alternative, Alternative 4A, proposes to stabilize water supplies, and exports could only increase under certain circumstances in which hydrological conditions result in availability of sufficient water and ecological objectives are fully satisfied. It is projected that water deliveries from the federal and state water projects under the preferred alternative would be almost the same as the average annual amount of water that would be diverted under the No Action Alternative (i.e. 2025 conditions without the preferred alternative). It is projected that Delta exports from the federal and state water projects would either remain similar or increase in wetter years and decrease in drier years under Alternative 4A as compared to exports under No Action Alternative (ELT) depending on the capability to divert water at the north Delta intakes during winter and spring months. The estimated changes in deliveries for 4A are provided in the Section 4.3.1 and Appendix A Chapter 5 Water Supply. Although exports under the preferred alternative would be similar to the amount water exported in recent history, it would make the deliveries more predictable and reliable, while reducing other stressors on the ecological functions of the Delta.</p>
1607	1	Every time I drive through the Central Valley, I see well diggers putting in new wells and new orchards going in constantly. This is during a drought and I see it as totally irresponsible behavior on the part of farmers. Taking water from the Delta to support this behavior is wrong, too. The wells alone will eventually make a dust bowl of California. It is all about obey and greed. We no longer see modest farmhouses but mansions which clearly illustrates the abuse.	<p>This comment letter is in part a form letter that has been submitted by many commenters. To locate the response to the form letter portion of the comment, please refer to the index of commenters in Chapter 4 of Volume II of the Final EIR/EIS, and cross reference the Form Master letter number shown there with the index of Form Masters also provided in Chapter 4 of Volume II of the Final EIR/EIS. The text below responds to the specific substantive portions of the comment letter that were submitted by the commenter.</p> <p>The comment does not raise any environmental issue related to the 2015 RDEIR/SDEIS or the 2013 DEIR/EIS.</p>
1608	1	OMG Governor Brown! You are suffering from a big time case of tunnel vision of the worst kind!	<p>This comment letter is in part a form letter that has been submitted by many commenters. To locate the response to the form letter portion of the comment, please refer to the index of commenters in Chapter 4 of Volume II of the Final EIR/EIS, and cross reference the Form Master letter number shown there with the index of Form Masters also provided in Chapter 4 of Volume II of the Final EIR/EIS. The text below responds to the specific substantive portions of the comment letter that were submitted by the commenter.</p> <p>The comment does not raise any environmental issue related to the 2015 RDEIR/SDEIS or the 2013 DEIR/EIS.</p>
1608	2	Yes, growers need water, and so do plants and animals and people, and it would be completely stupid to sacrifice endangered species and critical and unique eco-systems, because the growers want it! What do growers care????? Not much, as so many do not understand how the web of life works-----BUT just because we are in a drought doesn't mean that growers having hissy	<p>No issues related to the adequacy of the environmental impact analysis in the EIR/S were raised. All of the alternatives evaluated in the EIR/EIS would only divert water under existing water rights that were issued to DWR and Reclamation by the State Water Board with consideration for senior water rights and Area of Origin laws and requirements. DWR and Reclamation operate with water rights issued by the State Water Resources Control Board that are junior in priority to many senior water rights holders in the Delta watershed. Under the action alternatives, senior water rights holders would continue to receive the same amount of water as under the No Action Alternative. Conveyance facilities under the action alternatives</p>

RECIRC Ltr#	Cmt#	Comment	Response
		fits means that there is a real emergency for them!	could only deliver the amount of water diverted under the existing SWP and CVP water rights and in accordance with the existing and future related regulatory requirements based upon river water levels and flow, water available in the system, the presence of threatened and endangered fish species, and water quality standards.
1608	3	<p>Forget that quote" The business of America is business.." The business of you and the California legislature is to ensure that the eureka (which is different for every single Californian) remains in place for the future generations!!!!!!!!!!!!</p> <p>You cannot fix the drought by wrecking the state! You are acting in a very lame and silly way! Stop it and find some real scientists to work with. You are supposed to heal the bay-----not compromise it!</p> <p>Sustainability and not knee jerk silliness!</p>	<p>Since 2006, the proposed has been developed based on sound science, data gathered from various agencies and experts over many years, input from agencies, stakeholders and independent scientists, and more than 600 public meetings, working group meetings and stakeholder briefings.</p> <p>DWR's fundamental purpose of the proposed project is to make physical and operational improvements to the SWP system in the Delta necessary to restore and protect ecosystem health, water supplies of the SWP and CVP south of the Delta, and water quality within a stable regulatory framework, consistent with statutory and contractual obligations. By establishing a point of water diversion in the north Delta and new operating criteria to improve water volume, timing, and salinity, the proposed project is designed to improve native fish migratory patterns and allow for greater operational flexibility.</p>
1609	1	This is a water grab for big agribusiness!	<p>This comment letter is in part a form letter that has been submitted by many commenters. To locate the response to the form letter portion of the comment, please refer to the index of commenters in Chapter 4 of Volume II of the Final EIR/EIS, and cross reference the Form Master letter number shown there with the index of Form Masters also provided in Chapter 4 of Volume II of the Final EIR/EIS. The text below responds to the specific substantive portions of the comment letter that were submitted by the commenter.</p> <p>The comment does not raise any environmental issue related to the 2015 RDEIR/SDEIS or the 2013 DEIR/EIS. By establishing a point of water diversion in the north Delta and new operating criteria to improve water volume, timing, and salinity, the proposed project is designed to improve native fish migratory patterns and allow for greater operational flexibility. Providing regulatory oversight to oil companies or large agribusiness is outside the scope of the proposed project and environmental analysis. The project does not increase the amount of water to which DWR holds water rights or for use as allowed under its contracts. See Master Response 3 (Purpose and Need), Master Response 34(Beneficial Use of Water), Master Response 26 (Area of Origin), and Master Response 35 (MWD Water Supply).</p>
1610	1	Zero water for almond growers and any other crops that are exported for profit! Screw Big Ag!	<p>This comment letter is in part a form letter that has been submitted by many commenters. The text below responds to the specific substantive portions of the comment letter that were submitted by the commenter.</p> <p>The comment does not raise any environmental issue related to the 2015 RDEIR/SDEIS or the 2013 DEIR/EIS. State constitutional restrictions require the reasonable and beneficial use of water and state law requires that water supplied from the Delta be put to beneficial uses. The Lead Agencies do not have the authority to designate what water deliveries are used for.</p>
1611	1	The case has not been made to the public about the tunnels. I would think a PBS presentation or news TV could present the evidence for or against.	<p>This comment letter is in part a form letter that has been submitted by many commenters. To locate the response to the form letter portion of the comment, please refer to the index of commenters in Chapter 4 of Volume II of the Final EIR/EIS, and cross reference the Form Master letter number shown there with the index of Form Masters also provided in Chapter 4 of Volume II of the Final EIR/EIS. The text below responds to the specific substantive portions of the comment letter that were submitted by the commenter.</p> <p>The documentation generated by this proposed project has undergone extensive public and scientific input, discussion, and transparency, including the posting of administrative draft chapters online and providing many more opportunities for public participation than is normally required by the CEQA/NEPA processes (see Master Response 41 [Transparency]). Please also refer to Master Responses 4 (Alternative Development</p>

RECIRC Ltr#	Cmt#	Comment	Response
			and Tunnel Option) as to how the alternatives were developed and the tunnel option is the optimized alternative.
1612	1	I support the Delta Independent Science Board's final comments on the recirculated draft at: http://deltacouncil.ca.gov/docs/final-delta-isb-comments-partially-recirculated-draft-environmental-impact-reportsupplemental .	No issues related to the adequacy of the environmental impact analysis in the EIR/EIS were raised.
1612	2	Clearly, WaterFix is an attempt to push through the project without sufficient understanding of the possible outcomes. The recirculated draft leaves much of the analysis until the final draft, which is too late for public comment and demonstrates a lack of integrity.	All of the analysis relevant to meeting the letter and spirit of CEQA and NEPA is included in the Draft EIR/EIS and RDEIR/SDEIS. Revisions included in the Final EIR/EIS are mainly related to addressing comments on these documents, clarifying analyses and minor revisions and additions to the EIR/EIS. In addition, more than sufficient public review time was provided for the Draft EIR/EIS and RDEIR/SDEIS.
1612	3	WaterFix does not meet the requirements in the Water Code http://leginfo.ca.gov/faces/codes_displayText.xhtml?lawCode=WAT&division=35.&title=&part=4.&chapter=2.&article . * See specific requirements in Sections 85320-85321. * WaterFix no longer requires an NCCP/HCP, which the Water Code assumes. * WaterFix does not support regional solutions to California's water problems, as required in Section 85021: "The policy of the State of California is to reduce reliance on the Delta in meeting California's future water supply needs through a statewide strategy of investing in improved regional supplies, conservation, and water use efficiency. Each region that depends on water from the Delta watershed shall improve its regional self-reliance for water through investment in water use efficiency, water recycling, advanced water technologies, local and regional water supply projects, and improved regional coordination of local and regional water supply efforts."	The Proposed Project was developed to improve Delta habitat and SWP/CVP water supply reliability. Through the development of specific operational criteria, some of the actions in the 2008 U.S. Fish and Wildlife and 2009 National Marine Fisheries Service biological opinion reasonable and prudent alternatives would be superseded with the proposed project operational criteria, as described in Chapter 3, Description of Alternatives, in the EIR/S. Although the Proposed Project does not involve an HCP component, the lead agencies maintain that the Proposed Project would continue to meet the co-equal goals of a reliable water supply and a restored Delta ecosystem to benefit all water users. Under the range of alternatives considered in the EIR/S full contract amounts are not delivered in the majority of times to the SWP and CVP water contractors, as presented in Appendix 5A, Section C, CALSIM II and DSM2 Model Results, of the EIR/EIS. Long-term water deliveries to SWP and CVP water contractors located south of the Delta are lower under Alternatives 6, 7, and 8 as compared to the Existing Conditions and the No Action Alternative. The EIR/S and the Draft BDCP were prepared in a manner to comply with the 2009 Delta Reform Act, as described in Appendix 3I, BDCP Compliance with the 2009 Delta Reform Act, of the Final EIR/EIS. The project is just one element of the state's long-range strategy to meet anticipated future water needs of Californians in the face of expanding population and the expected effects of climate change. It is important to note that the project is not intended to serve as a state-wide solution to all of California's water problems, and it is not an attempt to address directly the need for continued investment by the State and other public agencies in conservation, storage, recycling, desalination, treatment of contaminated aquifers, or other measures to expand supply and storage (as described in Section 1.C.3 of Appendix 1C, Water Demand Management).
1612	4	One important benefit of regional water projects is that regional jobs would be created.	Changes in socioeconomics, including employment, are presented in Chapter 16 of the EIR/EIS.
1612	5	The mayor of Los Angeles announced that the city is weaning itself off of imported water, which decreases the need for this project. See his announcement here: http://www.pbs.org/newshour/bb/la-mayor-says-drought-shaming-civic-duty/ WaterFix is an outdated solution to regional water shortages. It would continue to support water policy as it is now, so water would continue to be underpriced and wasted.	The efforts completed by the City of Los Angeles are supportive of the action alternatives and included in the Existing Conditions, No Action Alternative, and Cumulative Impact analysis assumptions. In accordance with the Project Objectives and Purpose and Need (see Chapter 2 of the EIR/S), all of the action alternatives would continue the operation of the SWP and CVP in accordance with the existing water rights and regulatory criteria adopted by the State Water Resources Control Board, U.S. Fish and Wildlife Service, National Marine Fisheries Service, and California Department of Fish and Wildlife. The Proposed Project is not intended to serve as a state-wide solution to all of California's water problems, and it is not an attempt to address directly the need for continued investment by the State and other public agencies in agricultural and municipal/industrial water conservation, recycling, desalination, treatment of contaminated aquifers, or other measures to expand supply and storage (as described in Section 1.C.3 of

RECIRC Ltr#	Cmt#	Comment	Response
			Appendix 1C, Demand Management Measures).
1613	1	<p>Saleki Atsa,</p> <p>Ohlone/Costanoan-Esselen Nation is an historically documented previously recognized tribe. OCEN is the legal tribal government representative for over 600 enrolled members of Esselen, Carmeleno, Monterey Band, Rumsen, Chalon, Soledad Mission, San Carlos Mission and/or Costanoan Mission Indian descent. Though other indigenous people may have lived in the area, the area is the indigenous homeland of our people. Included with this letter please find a territorial map by Taylor 1856; Levy 1973; and Milliken 1990, identifying Tribal areas. At this time are unable to provide you with cultural resource information but ask that OCEN be contacted upon any findings on this project.</p> <p>Ohlone/Costanoan-Esselen Nation objects to all excavation in known cultural lands, even when they are described as previously disturbed, and of no significant archaeological value. Please be advised that it is our first priority that our ancestor's remains be protected and undisturbed. We desire that all cultural and sacred items be left with our ancestors on site or where they are discovered. We ask for the respect that is afforded all of our current day deceased, by no other word these burial sites are cemeteries, respect for our ancestors as you would expect respect for your deceased family members in today's cemeteries. Our definition of respect is no disturbance.</p>	<p>For additional information about Native American outreach efforts, including identification and analysis of impacts on archaeological sites, Traditional Cultural Properties, and cultural significance of biological resources, please see Master Responses 20 and 21. Additionally, Chapter 18, Cultural Resources, describes the coordination efforts made through the release of the RDEIR/SDEIS.</p>
1613	2	<p>Aware that despite our objection, disturbance continues, therefore: We request that Ohlone/Costanoan-Esselen Nation be consulted as to any planned projects that might adversely impact known or predicted cultural resources and sacred sites within our aboriginal territory. Furthermore, the Tribal leadership desires to be contacted with: 1) surveys, 2) subsurface testing, 3) presence/absence testing, 4) mitigation and recovery programs, 5) reburial of any of our ancestral remains, 6) placement of all cultural items, and 7) that a Native American Monitor of Ohlone/Costanoan-Esselen Nation, approved by the OCEN Tribal Council be used within our aboriginal territory.</p> <p>We look forward to hearing more information about this project; please feel free to contact me at (408) 629-5189. Nimasianexelpasaleki. Thank you for your attention to this matter.</p>	<p>For additional information about Native American outreach efforts, including identification and analysis of impacts on archaeological sites, Traditional Cultural Properties, and cultural significance of biological resources, please see Master Responses 20 and 21. Additionally, Chapter 18, Cultural Resources, describes the coordination efforts made through the release of the RDEIR/SDEIS.</p>
1613	3	[ATT1: Distribution of Ohlone/Costanoan-Esselen Nation Tribal Rancherias, Districts, Landgrants, and Historic Landmarks]	The comment describes an attachment to the comment letter. The attachment does not raise any additional issues related to the environmental analysis in the 2015 RDEIR/SDEIS or the 2013 Draft EIR/EIS that are not already addressed in comment referencing the attachment or the Final EIR/EIS.
1614	1	<p>I am writing to express my strong opposition to the Delta tunnels plan.</p> <p>In The Delta Reform Act of 2009, the California State Legislature committed to "coequal goals" of providing a more reliable water supply for California, as well as protecting and restoring the cultural, recreational, natural resource, and agricultural values of the Delta. Unfortunately, the intent of this legislation cannot be achieved if the Delta tunnels come to pass.</p> <p>Not only does the California WaterFix fail to meet the restoration goals of the Delta Reform Act, it will not be able to provide more reliable water, because the Delta watershed is already oversubscribed by five times its capacity in normal water years.</p> <p>The plan also fails to address potential environmental, public health or economic impacts of the proposed Delta tunnels project, and has ignored proposed alternatives that would save</p>	<p>It is important to note that the proposed project is not intended to serve as a state-wide solution to all of California's water problems and it is not an attempt to address directly the need for continued investment by the State and other public agencies in conservation, recycling, desalination, treatment of contaminated aquifers, or other measures to expand supply and storage. Nor is the proposed project intended to solve all environmental challenges facing the Delta. Please see Master Response 6 (Demand Management) for further information regarding how many of the suggested components have merit from a state-wide water policy standpoint, and some are being implemented or considered independently throughout the state, but are beyond the scope of the proposed project.</p> <p>The California WaterFix (referred to in the FEIR/FEIS as Alternative 4A) is DWR's preferred alternative under the California Environmental Quality Act (CEQA) and Reclamation's preferred alternative under the National Environmental Policy Act (NEPA). Alternative 4A addresses the reverse flow problem by focusing on the construction and operation of new north Delta intakes and on habitat restoration commensurate with the footprint of these new facilities. The construction and operation of new conveyance facilities, would help</p>

RECIRC Ltr#	Cmt#	Comment	Response
		California tax and ratepayers billions of dollars, while investing in the jobs and local water sources that would build sustainability.	<p>resolve many of the concerns with the current south Delta conveyance system while otherwise helping to reduce threats to endangered and threatened species in the Delta through habitat restoration, as necessary to mitigate significant environmental effects and satisfy applicable ESA and CESA standards. Implementing a dual conveyance system, in which water could be diverted from either the north or the south or both, depending on the needs of aquatic organisms, would align water operations to better reflect natural seasonal flow patterns by creating new water diversions in the north Delta equipped with state-of-the-art fish screens. The new system would reduce the ongoing physical impacts associated with sole reliance on the southern diversion facilities and allow for greater operational flexibility to better protect fish. Minimizing south Delta pumping would provide more natural east–west flow patterns. The new diversions would also help protect critical water supplies against the threats of sea level rise and earthquakes. Please see Master Response 3 (Purpose and Need) and Master Response 4 (alternatives development). For more information regarding the proposed project’s compliance with the Delta Reform Act please see Master Response 31.</p> <p>Alternative 4A, also known as California WaterFix, has been developed in response to public and agency input and is the new CEQA Preferred Alternative. Alternative 4A is also the NEPA Preferred Alternative, a designation that was not attached to any of the alternatives presented in the 2013 Public Draft EIR/EIS. Alternative 4 remains a potentially viable alternative and is being carried forward in this RDEIR/SDEIS because it represents the original habitat conservation plan/natural community conservation plan (HCP/NCCP) alternative approach, and because it provides an important reference point from which the Alternative 4A, 2D, and 5A descriptions and analyses were developed. If the Lead Agencies ultimately choose the alternative implementation strategy and select an alternative presented in the RDEIR/SDEIS after completing the CEQA and NEPA processes, elements of the conservation plan contained in the alternatives in the 2013 Public Draft EIR/EIS may be utilized by other programs for implementation of the long term conservation efforts.</p> <p>The primary parallel habitat restoration program is called California EcoRestore (EcoRestore), which will be overseen by the California Resources Agency and implemented under the California Water Action Plan.</p> <p>Environmental impacts are addressed throughout the EIR/EIS in relevant resource chapters; public health impacts are addressed in Chapter 25 and economic impacts are addressed in Chapter 16.</p>
1614	2	For large metropolitan cities such as Los Angeles and San Jose that depend on export water, water rates and/or property taxes will go up, but they will get no additional water.	<p>In accordance with the Project Objectives and Purpose and Need (see Chapter 2 of the EIR/S), all of the action alternatives would continue the operation of the SWP and CVP in accordance with the existing water rights and regulatory criteria adopted by the State Water Resources Control Board, U.S. Fish and Wildlife Service, National Marine Fisheries Service, and California Department of Fish and Wildlife. All of the alternatives evaluated in the EIR/EIS would only divert water under existing water rights which were issued to DWR and Reclamation by the State Water Board with consideration for senior water rights and Area of Origin laws and requirements. The proposed project does not seek any new water rights nor reduction in total water rights issued to DWR and Reclamation. However, the proposed project would decrease total exports of SWP and CVP water as compared to Existing Conditions and No Action Alternative in the summer and early fall months; and increase exports in the wet winter months when the river flows are high. The water would be stored at locations south of the Delta, including in Southern California and San Francisco Bay Area, during the high flow periods to allow reductions in deliveries to SWP and CVP water users in drier periods. As shown in Appendix 5A, Section C, SWP and CVP water deliveries in Southern California and San Francisco Bay Area region would be similar or increased as compared to Existing Conditions and the No Action Alternative.</p> <p>The construction of the water delivery facilities is estimated to cost \$14.9 billion, an amount that would be paid for by the State and federal water contractors who rely on Delta exports. The range of costs for water vary widely among contractors south of the Delta. Costs depend on the source of water, transport facilities, energy requirements, among other factors. For the agricultural customers of the CVP, prices range from</p>

RECIRC Ltr#	Cmt#	Comment	Response
			<p>\$100 per acre-foot to more than \$400 per acre-foot. The Metropolitan Water District of Southern California, which buys water from the SWP, estimates that the cost of the proposed project would translate into about \$5.00 extra per household, per month in its service area. The final cost of water from the new conveyance facilities would be determined by numerous factors. A number of these significant factors, such as the project yield and allocation of costs, have yet to be determined. Please see Master Response 5 for information regarding funding of the proposed project. Please see Master Response 4 regarding the development of alternatives and Master Response 6 for information on Demand Management.</p>
1614	3	<p>No analysis has been done on how the lack of fresh water flows will impact San Francisco Bay tourism and recreation. These industries depend on Delta fresh water flows for their crab and salmon fisheries, wildlife sighting, boating, and their restaurant economy. This industry is worth billions annually.</p>	<p>As described in Chapter 6, Surface Water, Section 6.3, in San Francisco Bay, Central Coast, South Coast, Tulare Lake, South Lahontan, and Colorado River hydrologic basins, SWP/CVP water supplies are conveyed in pipelines and canals and do not directly affect surface waters. Construction of facilities under the alternatives all would occur in the Delta of the Sacramento River and San Joaquin River basins. Therefore, the environmental consequences are focused on changes in surface water resources in the Sacramento River and San Joaquin River basins and the Delta.</p> <p>As described in Impact ECON-5 under Alternative 4A in Chapter 16, Socioeconomics, construction of water conveyance structures would be anticipated to result in a lower-quality recreational experience in a number of localized areas throughout the Delta, despite the implementation of environmental commitments. With a decrease in recreational quality, particularly for boating and fishing (two of the most popular activities in the Delta), the number of visits would be anticipated to decline, at least in areas close to construction activities. Under this alternative, recreational uses in the Delta at Clifton Court Forebay and in small areas of the Cosumnes River Preserve on Staten Island would be directly affected by construction activities. Six other recreational sites or areas would experience periods of construction-related effects, including noise, access, visual disturbances, or a combination of these effects. As described under Impact REC-2 in Chapter 15, Recreation, these include Clarksburg Boat Launch (fishing access), Stone Lakes NWR, Wimpy's Marina, Delta Meadows River Park, Bullfrog Landing Marina, and Lazy M Marina. Overall, the multi-year schedule and geographic scale of construction activities and the anticipated decline in recreational spending would be considered an adverse effect. Environmental commitments and mitigation measures would contribute to the reduction of this effect.</p> <p>An assessment of water quality effects resulting from changing Delta water quality and outflows on San Francisco Bay water quality is provided in Impact WQ-34 in Chapter 8, Water Quality, for all alternatives. The water quality assessment considered potential changes in constituent levels for all constituents of concern assessed in detail in Impacts WQ-1 through WQ-30, including changes in salinity, mercury, nutrients, and selenium. The assessment concluded that Alternative 4A would have a less than significant impact to San Francisco Bay water quality.</p>
1614	4	<p>Salinity intrusion is already impacting the western Delta farms removing Sacramento River freshwater from the system will only make matters worse. Delta farmers cannot irrigate crops with salt water and they will not be able to plant crops in contaminated soils. The Delta agriculture economy, which consists of generations of family farms and farm workers, generates \$5.2 billion for the California economy, annually.</p>	<p>The potential for water conveyance operations to affect salinity conditions in the Delta (including Suisun Marsh) under existing conditions and future no action conditions, and with implementation of each project alternative (including conservation measures), is assessed in detail in Chapter 8, Water Quality, of the EIR/EIS for the salinity-related parameters chloride (Impact WQ-7) and electrical conductivity (Impact WQ-11). Where significant impacts to water quality would occur due to the alternative, mitigation to lessen those impacts is provided.</p> <p>Impacts to agriculture and mitigation measures are discussed in Chapter 14 of the EIR/EIS and Master Response 18.</p>
1614	5	<p>Far less expensive and less environmentally destructive alternatives to the Delta tunnels have been largely ignored. Our tax and ratepayer dollars would be much better spent on:</p> <ul style="list-style-type: none"> -Funding water recycling and groundwater recharging projects statewide, which would 	<p>See response to comment 1614-2 regarding cost and purpose and need of the proposed project.</p> <p>While water storage is a critically important tool for managing California's water resources, it is not a topic that must be addressed in the EIR/EIS for the proposed project. This is because the proposed project does not, and need not, propose storage as a project component. Although the physical facilities contemplated by</p>

RECIRC Ltr#	Cmt#	Comment	Response
		allow communities to develop more sustainable and independent water sources.	<p>the proposed project, once up and running, would be part of an overall statewide water system of which new storage could someday also be a part, the proposed project is a stand-alone project for purposes of CEQA and NEPA, just as future storage projects would be. Appendix 1B, Water Storage, of the 2013 Public Draft EIR/EIS, describes the potential for additional water storage.</p> <p>Please see Master Response 4 regarding the development of alternatives. Please see Master Response 6 for information on Demand Management.</p>
1614	6	<p>Far less expensive and less environmentally destructive alternatives to the Delta tunnels have been largely ignored. Our tax and ratepayer dollars would be much better spent on:</p> <p>-Streamlining environmental review for water storage, desalination, water recycling, and other projects that will increase our water supply.</p>	<p>See response to comment 1614-2 regarding cost and purpose and need of the proposed project and 1614-5 regarding storage.</p> <p>Please see Master Response 7 regarding desalination, Master Response 6 regarding demand management, and Master Response 37 regarding water storage.</p>
1614	7	<p>Far less expensive and less environmentally destructive alternatives to the Delta tunnels have been largely ignored. Our tax and ratepayer dollars would be much better spent on:</p> <p>-Developing more aggressive water efficiency programs statewide.</p>	<p>See response to comment 1614-2 regarding cost and purpose and need of the proposed project.</p> <p>The Lead Agencies have no authority to designate what water is used for. One of the State Water Resources Control Board's (State Water Board's) charges is to ensure that the State's water is put to the best possible use and that this use is in the best interest of the California public. This charge is reflected in part by the designation of beneficial uses established through the State Water Board's planning process. These beneficial uses are identified in each Water Quality Control Plan (Basin Plan) issued by the State Water Board.</p> <p>The proposed project Lead Agencies have no power to impose penalties on individual water users. DWR and Reclamation have contracts with various entities, some of which sell water to water retailers, who have individual policies and programs to motivate ratepayers to conserve water. Different districts have the right to take different approaches depending on their individual circumstances.</p> <p>For additional information regarding beneficial use of water, please see master response 34.</p>
1614	8	<p>Far less expensive and less environmentally destructive alternatives to the Delta tunnels have been largely ignored. Our tax and ratepayer dollars would be much better spent on:</p> <p>-Improving Delta levees in order to address potential earthquake, flooding, and future sea level rise at a cost of \$2 to \$4 billion.</p>	<p>See response to comment 1614-2 regarding cost and purpose and need of the proposed project.</p> <p>Please see Appendix 6A of the FEIR/EIS, for the BDCP/CWF purpose and need, and for discussion on existing levee improvement programs and funding mechanisms, which would not be affected by the BDCP/CWF.</p> <p>For more information regarding floods and levees please see Appendix 6A.</p> <p>For more information on levee stability and seismic risk please see Master Response 16.</p>
1614	9	<p>Far less expensive and less environmentally destructive alternatives to the Delta tunnels have been largely ignored. Our tax and ratepayer dollars would be much better spent on:</p> <p>-Installing fish screens at the south Delta pumps in order to reduce the current salvage of marine life.</p>	<p>See response to comment 1614-2 regarding cost and purpose and need of the proposed project.</p> <p>DWR and Reclamation are required to improve fish collection efficiency at the existing south Delta salvage facilities, as part of facility improvements required by the National Marine Fisheries Service 2009 biological opinion on the SWP/CVP. For example, in 2014 Reclamation replaced the secondary louver system with a traveling screen system. These screens provide protection by guiding fish into the holding tanks while catching debris on pegs and transporting debris to a collection system at the work surface.</p> <p>The technology required at the proposed north Delta intakes and the existing south Delta export facilities differ fundamentally. The north Delta intakes would be located on the side of the river channel and so would be designed to comply with CDFW, NMFS, and USFWS fish screening criteria (BDCP Appendix 5B Section 3.B.3.3). The south Delta export facilities are located on dead-end channels and requires active collection and salvage of fishes.</p>

RECIRC Ltr#	Cmt#	Comment	Response
			Screening the intakes at Clifton Court Forebay was analyzed during the water conveyance alternative development process and is described in the 2013 Public Draft BDCP EIR/EIS, Appendix 3A. This alternative was eliminated from further evaluation because initial results of recent studies, including information included in the recent NMFS biological opinions, supported a phased approach that would emphasize improvements to operations of fish handling facilities and reduced predator potential within Clifton Court Forebay prior to further analysis of installation of fish screens. Nevertheless, DWR and Reclamation will continue investigating strategies to increase fish salvage efficiency, reduce pre-screen losses, and improve screening efficiencies, consistent with the 2009 biological opinion of the SWP/CVP.
1614	10	<p>The Delta has problems that need to be addressed, but the California WaterFix tunnels will not produce more water, more reliable supplies, or improve environmental conditions in the Delta.</p> <p>The Bureau of Reclamation and the Department of Water Resources should prepare and circulate a new Draft EIR/EIS that will include some of these alternatives. Such alternatives have a far better chance of complying with the Delta Reform Act and will do much more to increase water supply in regions throughout California.</p>	See response to comment 1614-1 regarding the alternatives and the Delta Reform Act.
1615	1	This isn't the way to fix the drought. 		California's ecosystem and all water!	<p>Volume II of the Final EIR/EIS, and cross reference the Form Master letter number shown there with the index of Form Masters also provided in Chapter 4 of Volume II of the Final EIR/EIS. The text below responds to the specific substantive portions of the comment letter that were submitted by the commenter.</p> <p>The comment does not raise any environmental issue related to the 2015 RDEIR/SDEIS or the 2013 DEIR/EIS. No response is required.</p>
1653	1	We cannot continually wreak havoc on our environment and ruin species that are endangered or otherwise. We need to rethink how we manage our state water and not simply blithely ship it away from its natural locations.	<p>This comment letter is in part a form letter that has been submitted by many commenters. To locate the response to the form letter portion of the comment, please refer to the index of commenters in Chapter 4 of Volume II of the Final EIR/EIS, and cross reference the Form Master letter number shown there with the index of Form Masters also provided in Chapter 4 of Volume II of the Final EIR/EIS. The text below responds to the specific substantive portions of the comment letter that were submitted by the commenter.</p> <p>All of the alternatives evaluated in the EIR/EIS would only divert water under existing water rights which were issued to DWR and Reclamation by the State Water Board with consideration for senior water rights and Area of Origin laws and requirements. The amount of water that DWR and Reclamation can pump from the new north Delta facilities is set by Federal regulating agencies, ESA compliance and project design, and not by the water contractors. Operations for the Proposed Project would still be consistent with the criteria set by the U.S. Fish and Wildlife Service and National Marine Fisheries Service biological opinions and State Water Resources Control Board Water Right Decision 1641 (D-1641), subject to adjustments made pursuant to the project and the adaptive management process, as described in Chapter 5, Water Supply of the EIR/S.</p> <p>The Proposed Project is not intended to serve as a state-wide solution to all of California's water problems, and it is not an attempt to address directly the need for continued investment by the State and other public agencies in agricultural and municipal/industrial water conservation, recycling, desalination, treatment of contaminated aquifers, or other measures to expand supply and storage (as described in Section 1.C.3 of Appendix 1C, Water Demand Management).</p>
1654	1	This water grab of the Bay Area's fresh water supply would be catastrophic to the Bay Area.	<p>This comment letter is in part a form letter that has been submitted by many commenters. To locate the response to the form letter portion of the comment, please refer to the index of commenters in Chapter 4 of Volume II of the Final EIR/EIS, and cross reference the Form Master letter number shown there with the index of Form Masters also provided in Chapter 4 of Volume II of the Final EIR/EIS. The text below responds to the specific substantive portions of the comment letter that were submitted by the commenter.</p> <p>No issues related to the adequacy of the environmental impact analysis in the EIR/S were raised. As a plan prepared to meet the rigorous standards of the federal and state Endangered Species Acts, the proposed project is intended to be environmentally beneficial, not detrimental. By establishing a point of water diversion in the north Delta and new operating criteria to improve water volume, timing, and salinity, the proposed project is designed to improve native fish migratory patterns and allow for greater operational flexibility. For more information regarding purpose and need of the proposed project please see Master Response 3.</p> <p>All of the alternatives evaluated in the EIR/EIS would only divert water under existing water rights that were issued to DWR and Reclamation by the State Water Board with consideration for senior water rights and Area of Origin laws and requirements. DWR and Reclamation operate with water rights issued by the State Water Resources Control Board that are junior in priority to many senior water rights holders in the Delta watershed. Under the action alternatives, senior water rights holders would continue to receive the same amount of water as under the No Action Alternative. Conveyance facilities under the action alternatives could only deliver the amount of water diverted under the existing SWP and CVP water rights and in accordance with the existing and future related regulatory requirements based upon river water levels and flow, water available in the system, the presence of threatened and endangered fish species, and water</p>

Refer to Master Response 3 (Purpose and Need).</p>
1662	1	I think that sucking water out of the Delta will have a huge negative impact on the Bay's ecosystems in the long range and possibly cause irreversible effects on Delta life!	<p>This comment letter is in part a form letter that has been submitted by many commenters. To locate the response to the form letter portion of the comment, please refer to the index of commenters in Chapter 4 of Volume II of the Final EIR/EIS, and cross reference the Form Master letter number shown there with the index of Form Masters also provided in Chapter 4 of Volume II of the Final EIR/EIS. The text below responds to the specific substantive portions of the comment letter that were submitted by the commenter.</p> <p>The Proposed Project would enable DWR to construct and operate new conveyance facilities that improve conditions for endangered and threatened aquatic species in the Delta while at the same time improving water supply reliability, consistent with California law (see, e.g., Cal.Wat. Code, § 85001[c]). Implementing the conveyance facilities would help resolve many of the concerns with the current south Delta conveyance system, and would help reduce threats to endangered and threatened species in the Delta, including entrainment at the south Delta export facilities. For instance, implementing a dual conveyance system would align water operations, and their location, to better reflect natural seasonal flow patterns by creating new water diversions in the north Delta equipped with State-of-the-art fish screens, thus reducing reliance on south Delta exports during times of the year when listed aquatic species are present and most vulnerable. For more information on mitigation measures to minimize contraction and operational-related impacts to fish species, including Delta and longfin smelt, please see Chapter 11, RDEIR/SDEIS.</p>
1663	1	This is not well thought out. Water is a basic need and priceless.	<p>This comment letter is in part a form letter that has been submitted by many commenters. To locate the response to the form letter portion of the comment, please refer to the index of commenters in Chapter 4 of Volume II of the Final EIR/EIS, and cross reference the Form Master letter number shown there with the index of Form Masters also provided in Chapter 4 of Volume II of the Final EIR/EIS. The text below responds to the specific substantive portions of the comment letter that were submitted by the commenter.</p> <p>Please note that the project has been initiated and carried forward by two Governors acting on a mandate from the voters of the State as a whole. Since 2006, the proposed project has been developed based on sound science, data gathered from various agencies and experts over many years, input from agencies, stakeholders and independent scientists, and more than 600 public meetings, working group meetings and stakeholder briefings. The Proposed Project is intended to provide a more reliable water supply, with</p>

RECIRC Ltr#	Cmt#	Comment	Response
			<p>diversions that are more protective for fish, in accordance with the Delta Reform Act co-equal goals of improving water supply reliability and Delta ecosystem health.</p> <p>DWR’s fundamental purpose of the proposed project is to make physical and operational improvements to the SWP system in the Delta necessary to restore and protect ecosystem health, water supplies of the SWP and CVP south of the Delta, and water quality within a stable regulatory framework, consistent with statutory and contractual obligations.</p> <p>Please refer to Master Response 4 (Alternatives), Master Response 31 (Delta Reform Act) and Master Response 3 (Purpose and Need) for further information on the development of the proposed project.</p>
1664	1	<p>No Delta tunnels project. The tunnels would divert massive amounts of water, greatly reducing Sacramento River flows, the main source of fresh water for the Delta and San Francisco Bay. Most of this water would be diverted for industrial-scaled agriculture, including extremely water-intensive almond and pistachio orchards. This is another blatant, obvious push by corporate lobbying/bribery power meant to favor the agricultural industry as they write the laws for their greedy, selfish interests with the politicians allowing it to happen.</p>	<p>This comment letter is in part a form letter that has been submitted by many commenters. To locate the response to the form letter portion of the comment, please refer to the index of commenters in Chapter 4 of Volume II of the Final EIR/EIS, and cross reference the Form Master letter number shown there with the index of Form Masters also provided in Chapter 4 of Volume II of the Final EIR/EIS. The text below responds to the specific substantive portions of the comment letter that were submitted by the commenter.</p> <p>State constitutional restrictions require the reasonable and beneficial use of water and state law requires that water supplied from the Delta be put to beneficial uses. The Lead Agencies do not have the authority to designate what water deliveries are used for. Please refer to Master Response 34 regarding the potential uses of water delivered via proposed conveyance facilities.</p>

The text below responds to the specific substantive portions of the comment letter that were submitted by the commenter.</p> <p>The comment does not raise any environmental issue related to the 2015 RDEIR/SDEIS or the 2013 DEIR/EIS.</p>
1670	1	<p>Please strenghten the things that remain. So much is gone and for what reason?</p>	<p>This comment letter is in part a form letter that has been submitted by many commenters. To locate the response to the form letter portion of the comment, please refer to the index of commenters in Chapter 4 of Volume II of the Final EIR/EIS, and cross reference the Form Master letter number shown there with the index of Form Masters also provided in Chapter 4 of Volume II of the Final EIR/EIS. The text below responds to the specific substantive portions of the comment letter that were submitted by the commenter.</p> <p>Since the late 1800s, the Bay-Delta ecosystem has been substantially altered. Changes in key environmental attributes of the Bay-Delta have contributed to the current degraded state of the ecosystem and appear to be proximate causes of declines in desired fishes and increases in non-native species. Though the proposed project is not intended to address all the factors that have contributed to the Delta's decline and briefly summarizes a few but not all of those factors. Many factors that have contributed to the decline of the Delta's ecosystem including the conversion of tidal marsh and floodplains to farmland, construction of levees and altering of tide flows, in-Delta and upstream water diversions, contaminant discharges, ammonia and nutrient discharges and changes to the food web, increases in water temperatures, and introduction of non-native and invasive species. The Delta will remain in a highly altered state for the foreseeable future and California Waterfix is not intended to address all the past harms or restore the Delta to a pre-altered state.</p>
1671	1	<p>This is a quick fix solution that will end up creating other destruction and at this point we cannot afford to make hasty, unwise decisions.</p>	<p>This comment letter is in part a form letter that has been submitted by many commenters. 1673	1	I do not support Governor Brown's water export tunnels. I am a Bay Area voter. Please represent me and do not support Alternative 4A.	<p>This comment letter is in part a form letter that has been submitted by many commenters. To locate the response to the form letter portion of the comment, please refer to the index of commenters in Chapter 4 of Volume II of the Final EIR/EIS, and cross reference the Form Master letter number shown there with the index of Form Masters also provided in Chapter 4 of Volume II of the Final EIR/EIS. The text below responds to the specific substantive portions of the comment letter that were submitted by the commenter.</p> <p>The issue raised by the commenter addresses the merits of the project and does not raise any issues with the environmental analysis provided in the EIR/S.</p>
1674	1	Please find other solutions to California's water crisis, Governor Brown. Do not destroy our ecosystems, thus destroying more of our dying planet. This is a selfish move that is not a best choice. It is a momentary fix and we will lose the Delta forever.	<p>This comment letter is in part a form letter that has been submitted by many commenters. To locate the response to the form letter portion of the comment, please refer to the index of commenters in Chapter 4 of Volume II of the Final EIR/EIS, and cross reference the Form Master letter number shown there with the index of Form Masters also provided in Chapter 4 of Volume II of the Final EIR/EIS. The text below responds to the specific substantive portions of the comment letter that were submitted by the commenter.</p> <p>The issue raised by the commenter addresses the merits of the project and does not raise any issues with the environmental analysis provided in the EIR/S. The proposed project was developed to meet the rigorous standards of the federal and state Endangered Species Acts; as such the proposed project is intended to be environmentally beneficial. By establishing a point of water diversion in the north Delta and new operating criteria to improve water volume, timing, and salinity, the proposed project is designed to improve native fish migratory patterns and allow for greater operational flexibility. Refer to Master Response 3 (Purpose and Need).</p>
1675	1	It sounds so easy, just shuffle things from here to there, problem solved! Unfortunately, it is not that easy. Displaced harm is still harm. Sometimes we need to take the tough actions and this is one such time. The Delta tunnels will not solve our water use needs and will cause harm to the basic operating system of California's environment. Please reject this pipe dream.	<p>This comment letter is in part a form letter that has been submitted by many commenters. To locate the response to the form letter portion of the comment, please refer to the index of commenters in Chapter 4 of Volume II of the Final EIR/EIS, and cross reference the Form Master letter number shown there with the index of Form Masters also provided in Chapter 4 of Volume II of the Final EIR/EIS. 1690	1	Quit taking Northern California's water!	<p>This comment letter is in part a form letter that has been submitted by many commenters. To locate the response to the form letter portion of the comment, please refer to the index of commenters in Chapter 4 of Volume II of the Final EIR/EIS, and cross reference the Form Master letter number shown there with the index of Form Masters also provided in Chapter 4 of Volume II of the Final EIR/EIS. The text below responds to the specific substantive portions of the comment letter that were submitted by the commenter.</p> <p>No issues related to the adequacy of the environmental impact analysis in the EIR/S were raised. The project proposes to stabilize water supplies, and exports could only increase under certain circumstances. Water deliveries from the federal and state water projects under a fully-implemented Alternative 4A are projected to be almost the same as the average annual amount diverted in the last 20 years. Although the proposed project would not increase the overall volume of Delta water exported, it would make the deliveries more predictable and reliable, while restoring an ecosystem in steep decline.</p>
1691	1	Do not kill the Delta. Do not build the tunnels.	<p>This comment letter is in part a form letter that has been submitted by many commenters. Beneficial uses include agricultural, municipal, and industrial consumptive uses; power production; and in-stream uses including fish protection flows. Fracking or "hydraulic fracturing" presumably could be an "industrial" use of water, and is a lawful use of</p>

RECIRC Ltr#	Cmt#	Comment	Response
			<p>water. Pursuant to Senate Bill 4 from 2013 (Stats. 2013, Ch.313), moreover, the state Department of Conservation, through its Division of Oil, Gas, and Geothermal Resources (DOGGR), is currently working on fracking regulations. Please see Master Response 34 for additional information regarding use of water delivered by proposed water conveyance facilities.</p> <p>One of the State Water Resources Control Board's (State Water Board's) charges is to ensure that the State's water is put to the best possible use and that this use is in the best interest of the California public. This charge is reflected in part by the designation of beneficial uses established through the State Water Board's planning process. These beneficial uses are identified in each Water Quality Control Plan (Basin Plan) issued by the State Water Board.</p> <p>The proposed project Lead Agencies have no power to impose penalties on individual water users. DWR and Reclamation have contracts with various entities, some of which sell water to water retailers, who have individual policies and programs to motivate ratepayers to conserve water. Different districts have the right to take different approaches depending on their individual circumstances.</p>
1699	1	Please protect the species and the ecosystem of the Delta. We have already done enough damage. Please say no to the water export tunnels.
