

## Chapter 5 Water Supply

---

1  
2

3 The assessment of impacts on water supply is based on changes in operations that would occur as a  
4 result of implementing the approved project. Because operation of the proposed project would be  
5 identical to operation of the approved project, there would be no incremental impacts on water  
6 supply attributable to modifying the footprint of the water conveyance facilities. Consequently, there  
7 would be no changes in the conclusions presented in the analysis of water supply impacts for the  
8 approved project (Alternative 4A). These impacts are fully disclosed in Final EIR/EIS Chapter 5  
9 *Water Supply*.

10 The water supply analysis provided in the Final EIR/EIS considered impacts upstream of the Delta,  
11 within the Delta, and within the CVP/SWP service areas. The analysis addressed changes in SWP and  
12 CVP water deliveries during construction and operation of the water conveyance facilities.  
13 Cumulative impacts on water supplies were also evaluated. As noted above, these impacts are fully  
14 described in Final EIR/EIS Chapter 5 *Water Supply*.
