Att: State Water Resources Board

I am writing on behalf of the Delta communities that will be severely impacted by construction of the tunnels. Our personnel wells and the irrigation systems for the agriculture will be compromised, the sludge piled high from the intakes will destroy homes and agriculture along with increased mosquito populations for many counties. The state is so interested in promoting the farm-to-fork concept so it is inconceivable that the tunnels would be allowed to destroy prime farmland.

We are not farmers but we enjoy the benefits of living in such a beautiful area. The communities and tourists alike enjoy the fish, birds, and wildlife habitat in the Delta. The construction of the tunnels would adversely affect all of the above.

Please take into consideration when making your decision how the residents of the state will be impacted financially. Please research other options such as reservoirs and desalination plants before destroying this beautiful estuary.

Thank you for your consideration.
