August 25, 2005

Diane Riddle, Environmental Scientist  
State Water Resources Control Board  
P. O. Box 100  
Sacramento, CA 95812-0100

Dear Ms. Riddle,

It has come to our attention that there is a discrepancy for one of the values in the recommended February through April 14 and May 16 through June flow objectives on the San Joaquin River at Vernalis, between those contained in our March 21, 2005, comment letter and the summary provided in our June 3, 2005, comment letter. The numbers for the correct value, 3,420 cfs, contained in the March 21 letter, were accidentally transposed as 3,240 cfs in the June 3 letter. Please use the 3,420 cfs value as the change in Vernalis flows recommended by the Bay Institute.

Sincerely,

Gary Bobker  
Program Director
