

Dear Ms. Bean,

I have been an avocado and lemon grower for 26 years in Ramona, California. I buy water from the Ramona Municipal Water District in San Diego County. I have struggled to keep my grove in business as the cost of water has escalated over the years. The high cost of water I currently pay has already necessitated optimizing the water I use. I feel like I have probably already done more than my share of making food with minimal water. Please don't turn your back on my efforts. Please include my San Diego County grove with the handling of the other agriculture in the state as they are exempt from the mandatory restrictions.

As the Farm Bureau put it best:

In his April 1<sup>st</sup> call for statewide water use reductions and in comments since, Governor Brown stated that the mandatory program of restrictions was not directed at agriculture. It has now been learned the proposed conservation framework considers farming in San Diego County to be part of the urban landscape and subject to the same restrictions designed to curb excessive landscape irrigation. This provision will create undue harm to farmers in San Diego County who are just as important as farmers in other parts of the state. The conservation framework should exclude all agriculture as Governor Brown promised, regardless of location.

All water users in San Diego County have made heavy investments in a system that includes a variety of water sources. That investment has been so high as to force many local farmers out of business and idle thousands of acres of productive farmland. This investment was done intentionally based on lessons from previous droughts with the aim of lessening the impacts of future droughts. This exact strategy was promoted by Governor Brown last year when he called for increased regional self-reliance. San Diego County not only heeded that call, but we were practicing it long before the governor's proclamation. To now say those efforts cannot be used to mitigate the impacts of this drought is a powerful disincentive to make future investments in local water supplies.

Farmers in San Diego County are no less concerned about the ongoing drought as are other Californians. Please consider and act on these comments as a matter of fairness.

Sincerely,

Donna Dubay
