

Dear Ms. Bean,

In his April 1st call for statewide water use reductions and in comments since, Governor Brown stated that the mandatory program of restrictions was not directed at agriculture. It has now been learned the proposed conservation framework considers farming in San Diego County to be part of the urban landscape and subject to the same restrictions designed to curb excessive landscape irrigation. This provision will create undue harm to farmers in San Diego County who are just as important as farmers in other parts of the state. The conservation framework should exclude all agriculture as Governor Brown promised, regardless of location.

All water users in San Diego County have made heavy investments in a system that includes a variety of water sources. That investment has been so high as to force many local farmers out of business and idle thousands of acres of productive farmland. This investment was done intentionally based on lessons from previous droughts with the aim of lessening the impacts of future droughts. This exact strategy was promoted by Governor Brown last year when he called for increased regional self-reliance. San Diego County not only heeded that call, but we were practicing it long before the governor's proclamation. To now say those efforts cannot be used to mitigate the impacts of this drought is a powerful disincentive to make future investments in local water supplies.

Farmers in San Diego County are no less concerned about the ongoing drought as are other Californians. Please consider and act on these comments as a matter of fairness. We are already one of the smallest percentages of water users, especially when compared to the state's and the world's agricultural water allocation. (See the chart below and at this site: http://www.wrsc.org/attach_image/water-usage-san-diego-compared-california-and-rest-world) Agricultural water use in San Diego County is already reduced considerably, by more than 30% since 1990, according to San Diego County Water Authority's water-use charts (<http://www.sdcwa.org/water-use>). San Diego County's farming economy is the 12th largest in the entire nation, and water is a vital part of our business. It's not about shortening a shower or not watering a decorative lawn, it is our livelihood. To continue increasing the cost of agricultural water combined with further restrictions on allocations is like the government forcing us out of our farming businesses, not unlike contracting with us to NOT plant our crops—which is an action that deserves government compensation at the very least.

Sincerely,

Elizabeth Edwards
