Banking and finance
Natural Resources
Utilities and Commerce
Joint Committee on Arts

May 4, 2015

Ms. Felicia Marcus, Chair
State Water Resources Control Board
1001 I Street
Sacramento, CA 95814

Dear Chair Marcus,

Thank you for the opportunity to comment on that State Water Resource Control Board (SWRCB) Draft Drought Emergency Water Conservation Regulations. As the Assemblyman representing the City of Torrance, I appreciate the SWRCB efforts to solicit local water agency input on these pending regulations. While supportive of the SWRCB's draft regulations, I have the following comments regarding my concerns and other considerations that I believe should be taken into account in establishing reduction targets and implementation of these regulations:

- 1) **Credit for Recycled Water** – Torrance Municipal Water (TMW) uses approximately 27,000 acre feet (AF) of water annually. Of this amount, on average 6,500 AF is recycled water that is delivered to the ExxonMobil Refinery for process water requirements and landscape irrigation. In addition to ExxonMobil, TMW provides recycled supplies to 35 other customers for landscape irrigation purposes. All of the recycled water use displaces water formally derived from potable water sources, and we believe that this factor should be recognized in establishing the SWRCB water reduction targets.
- 2) **Credit for Groundwater and Groundwater Desalination** - On an annual basis TMW derives approximately 3,600 AF of potable water from these two local sources, which equates to about 18% of total potable demand. The use of both local sources offsets an equivalent amount of potable use, and this factor should be recognized. The groundwater desalination plant (Goldsworthy Desalter) extracts saline groundwater and converts it into a potable source. This is “recovery project” from a non-potable source, and if the Desalter was not in operation an equivalent amount of potable water from imported sources would need to be purchased. In addition, the groundwater pumped by TMW is derived from recycled water, which is pumped into a series of wells that form fresh water barrier to prevent further intrusion of seawater into the local groundwater basin. This “barrier water” flows underground and 10-20 years later becomes the principal water source for our groundwater wells.

- 3) **Flexibility on Watering Days – Equivalency Factor** -The SWRCB draft regulations limit outdoor to two days per week. In our Conservation Ordinance, the City is proposing an **equivalency provision**, which meets the intent of the draft regulations but provides for needed flexibility in implementation. Torrance Conservation Ordinance has other limitations that are not included in the SWRCG regulations including limitations on watering times and duration. Certain areas in Torrance have extremely expansive soil which requires more frequent watering at low volumes to maintain constant moisture content to prevent the foundation damage caused by expansion and contraction of soil. In addition, certain soil conditions and slopes contours of various properties require more frequent watering than 2 days per week, but with shorter duration of time to maintain vegetation.

- 4) **Enforcement/Penalties** – In 2009, Torrance enacted its current Conservation Ordinance, which prohibits wasteful water uses and places certain restrictions on water uses, particularly outdoor watering on permanent and continuous basis. Monitoring is through a web based citizen reporting system and observations made by personnel in field. Enforcement is primarily through the issuance of water wasting door hangers, warning letter, site visitations and counseling of violators.
The SWRCB draft regulations provide for the levying of substantial fines/penalties to cities for not meeting certain requirements. We believe this needs additional clarification.

- 5) **Daytime Population** - Although Torrance has less than 150,000 full time residents, the City's daytime populations swells to 500,000 because it is a major business, job and shopping center for the South Bay region. When calculating the residential gallons per capita per day (R-GPCD) this factor should be a consideration. Again we wish to thank the State Water Resources Control Board for affording the City of Torrance the option to provide our input into this process, and welcome the opportunity discuss our concerns with the SWRCB board members and staff.

Please do not hesitate to contact Lyndsay Mitchell, my Legislative Director, at 916-319-2066 should you have any questions

Sincerely,

David Hadley
Assemblyman, 66th District
