

To whom It May Concern,

I'm writing to address the state water board about the Bay Delta water Quality control plan. I grew up in California, playing in Rivers, hiking and swimming in the Delta. The Delta is an intricate part of the northern California eco-system. Low river flows impede fish passage, concentrate pollutants, raise water temperatures and eliminate migratory cues.

In 2010, the water Board determined that 60% of unimpaired flow between February and June would be enough to protect fish + wild life and support
→

croops and agreement.
I know there are many interested parties, and that 60% ~~is~~ may be too much to ask, but I don't think 50% of unimpaired flow is too much to ask for. Thanks for your time. I look forward to seeing the Water Board stand strong.

Sincerely,

Marlee
