Subject: Countdown to Extinction

Dear Mr. Satkowski,

I believe in good science, and I believe in the hard work of The Bay Institute – please consider the following concerns from these very fine researchers:

1. Reverse your decision to relax the D-164I March requirements for inflows to San Francisco Bay and ensure that these flows critical to the continued existence of Delta smelt, winter-run Chinook salmon and other species are actually provided.
2. Reverse your decision to partly relax the D-164I limits on export pumping, in order to prevent devastating impacts on the last remaining Delta smelt and winter-run salmon.

Our natural resources have intrinsic value in addition to the economic value by all people that have a stake in these species [across the county]. Extinction is forever, Mr. Satkowski – please don't let that happen on your watch.

Thank you,

Claudette
