

Following is an email notification issued on October 14, 2016.

This is a message from the State Water Resources Control Board.

The State Water Resources Control Board (State Water Board) has determined water is now available to divert by holders of permits and licenses with Standard Term 91. This notification begins immediately and will remain in effect until further notice.

Please monitor your email and our website for further updates on water availability. Curtailment under Term 91 may be re-established at any time if dry conditions persist.

During this diversion opportunity, you must comply with all terms and conditions of your specific water right, especially season of diversion and bypass conditions. You should maintain a record of your diversions since such diversions are still subject to prior rights and reporting requirements. Any diversion in violation of terms and conditions of these notices is subject to enforcement.

Additional Information on Standard Term 91

Permits or licenses containing Standard Term 91 are prohibited from diverting water under specified conditions. These conditions occur when Supplemental Project Water from the Central Valley Project operated by the U.S. Bureau of Reclamation or the State Water Project operated by the California Department of Water Resources is being released to meet water quality standards and other in-basin entitlements in the Sacramento-San Joaquin Delta Watershed.

The State Water Board has determined Supplemental Project Water is not being released in the Sacramento-San Joaquin Delta Watershed.
