Please regard my comment to deny an expired permit by Nestle. This is so important as the water extraction provides them with profits at the expense of ground water, endangered species, trees that are dependent on water, drought and finally fire! I live in the mountain community and know first hand how critical and far reaching this decision will reach into the future.

The USF has turned a blind eye to this issue because Nestle controls them by threats of USF job loss or relocation.

You must standup and make the right decision to protect our future. Nestle's legal standing is nonexistent and is a joke.
