

Members California Water Board:

Please do not export water from our valley rivers that are so crucial to the residents and especially our farmers.

Our valley is a very important agricultural area and we must keep a good supply of water to continue farming and providing jobs as has been done for generations.

Costs must be kept at a reasonable level for these farmers to continue in business. California is a large provider of food not only in our state but elsewhere so it is urgent that the issue of water supply and cost be addressed appropriately.

Thank you for the opportunity to make a comment on this important issue.

Best Regards,

Catherine Ensley
Escalon, CA
