

To whom it may concern with the water board. Please do not regulate any more or take any of our precious river water. it is the life blood of agricultrue here in California. The San Joaquin Valley is not a prosperous place. Unemployment is to high and especially compared to the rest of the state and the rest of the United States. If you take more water you will only devastate this area more. In fact what we really need are more dams and reservoirs to store more water when it become abundant. The wet years and dry years cycle. I am 68 years old and lived here all my life and been involved in agriculture all my life. I have seen wet years and dry years. It cycles and when we do have wet years we need to store that water, not send it down the river or send it to Los Angeles. They really need to fend for themselves. Please consider this request

Sincerely
