The most recent Sacramento graph has the corrected pre-14 and riparian demands according to what they reported on the informational order.

The prior graph had a user's pre-14 demand rolled into the riparian demand if they had reported under both claims; similar to the Delta situation. After John learned of that, he had us revert back to the separated demands from the informational order for all areas outside of the Delta which results in a smaller riparian demand.

Brian

Hi Kathy - See below. I forgot John O. was gone this week. Do you know why the riparian demand changed in the two charts? Thanks, Jen

Subject: Change in Riparian demand for Sac Basin Supply/Demand Charts?

John and Michael - I noticed today that there is a significant change in the magnitude of riparian demand depicted in the 5/1/15 Sac Basin chart (included in the SWRCB press release, attached) and the currently posted chart (dated 5/11/15, link below). With the currently posted chart, it appears riparian curtailment won't be needed in the Sac Basin. What is accounting for this change in the magnitude of the riparian demand between the two charts? Thanks - Jen
