

We the water consumers of the Monterey Peninsula are the most conscientious of consumers, using only about 75 gallons per person per day. How in the world can you think about requiring us to reduce our water usage by another 25%? That will dramatically affect our economy and quality of life. It is not right for you to impose further water cutbacks and/or obligations that we have no idea whether or not can be fulfilled. What we need is some action either locally to create more water for us or by the state in creating more water for the whole state, perhaps from desalinization plants, as Marin county is doing.
