Applications 9247 - 9267

Sierra Pacific Power Co.,  
21 East First Street  
Reno, Nevada

Gentlemen:

At the time of the inspection on August 18, 1942 of the project covered by your approved Applications 9247 and 9267 it was found that your usual procedure was to release the water stored in Independence Lake between October 15 and December 1 and restore it in Boca Reservoir for regulated use and for holdover storage. In view of this procedure it would appear that Boca Reservoir should be included as a place of storage under these filings and petition forms are enclosed for this purpose. The petitions should be accompanied by contour maps of the reservoir which should show the tie to a section corner for the Boca Dam.

In the case of Application 9267, after approval of the petition, it would then be forwarded for license consideration based on storage in either or both reservoirs with the provision that the total combined storage should not exceed the 17,500 acre-feet covered by the filing.

Very truly yours,

EDWARD HYATT, STATE ENGINEER

By \_\_\_\_\_  
Deputy State Engineer.
