Subject: Memo from co-worker Morris Israel on a simple
TROA that you might find interesting.

Hi Bill-

Your suggestion is probably too clear-minded for the TROA participants, but it makes a world of sense. In fact in some of the modeling work I've done, that is exactly what I represented - a system in which reservoir storage is for the use of any and all downstream water demands, regardless of whose water it is. I did a little optimization so the system is somewhat simplified, but the results indicate that conflicts in meeting demands can be reduced some. I hope somebody out there considers this. It may be institutionally difficult but if the will of the participants is to put all this bs behind them, then they'll do something.

I'm headed back to DC next weekend, so I don't think I'll be seeing you any time soon. Carry on the fight!!!! Keep me posted, this e-mail address should be good for a few more months (university is slow about taking people off).

All the best,
Morris
