Subject: project at Eagle Mountain

Dear California State Water Board:

I have written letters in opposition to this project since its initial inception. First, the company went ahead without a lease or agreement from the landowners and FERC went right along with their application, without a legal or binding lease. I understand they have purchased land now for their project but the National Park is not in favor of their project nor is BLM and now the groups that have in the past opposed and have started litigation are being ignored and put away in a closet. And the project is being pushed or rather ramrodded forward. What sort of transparency is this??

We are one of their closest neighbors...We know how precious water is to our area and how dear it is to develop and have for the public and community. This project will affect the Desert Center Valley area and the wells within. And why--to create some green electricity....and why???? in the area where there are acres and acres of solar panels creating power as I type this...power is surging across the transmission lines bordering the I-10.

I am opposed to this project and am sorry that our voices of opposition are not being heard or listened to or acknowledged...all for the sake of being GREEN...I think the only green that is being seen is the money.. this is certainly not a true green environmentally friendly project.

Margit
