
Appendix K
Flood Hydrology

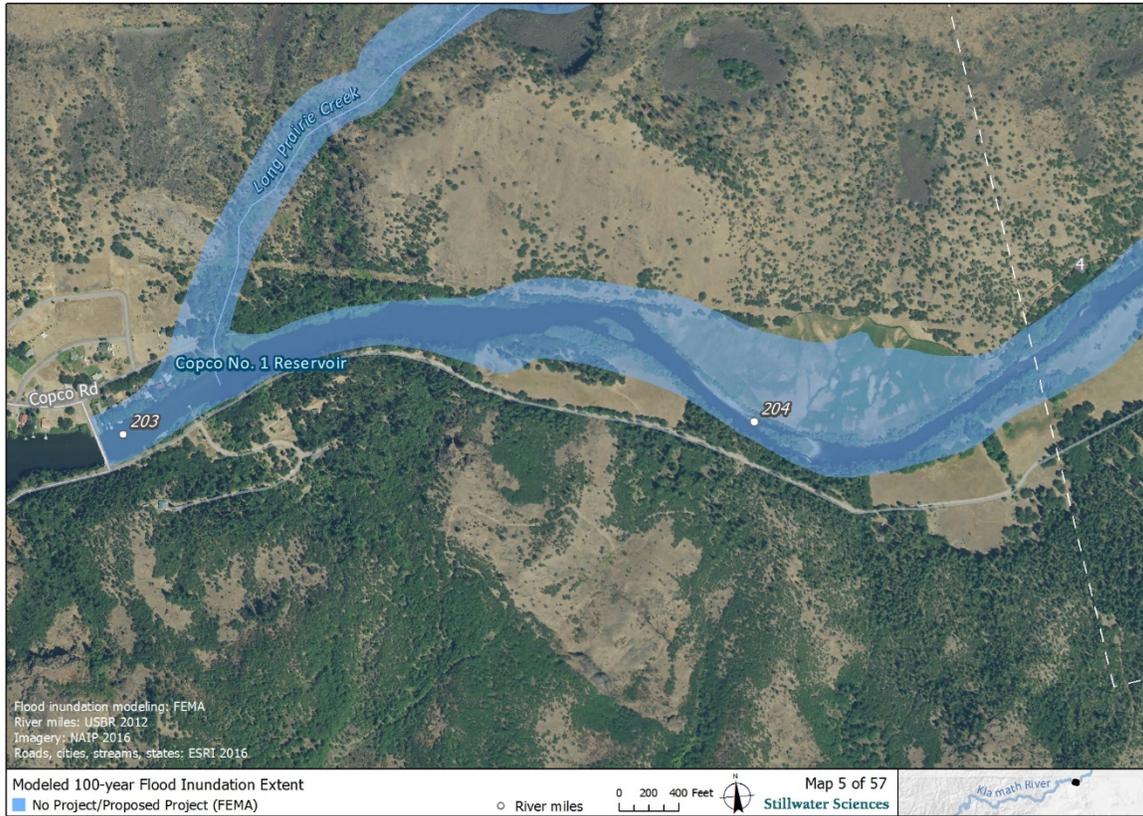

The following maps illustrate modeled 100-year flood inundation mapping conducted by FEMA (map tiles 1–5) and USBR (map tiles 6–57). USBR flood inundation mapping uses daily average flows under the two scenarios modeled in USBR (2012¹¹), including the Proposed Project (dams removal) and No Project (dams remain in place). The USBR modeling extends from Iron Gate Dam downstream to Happy Camp at approximately river mile 107. FEMA will make the final determination of the future 100-year floodplain after dam removal and the KRRC is coordinating with FEMA to initiate the map revision process.

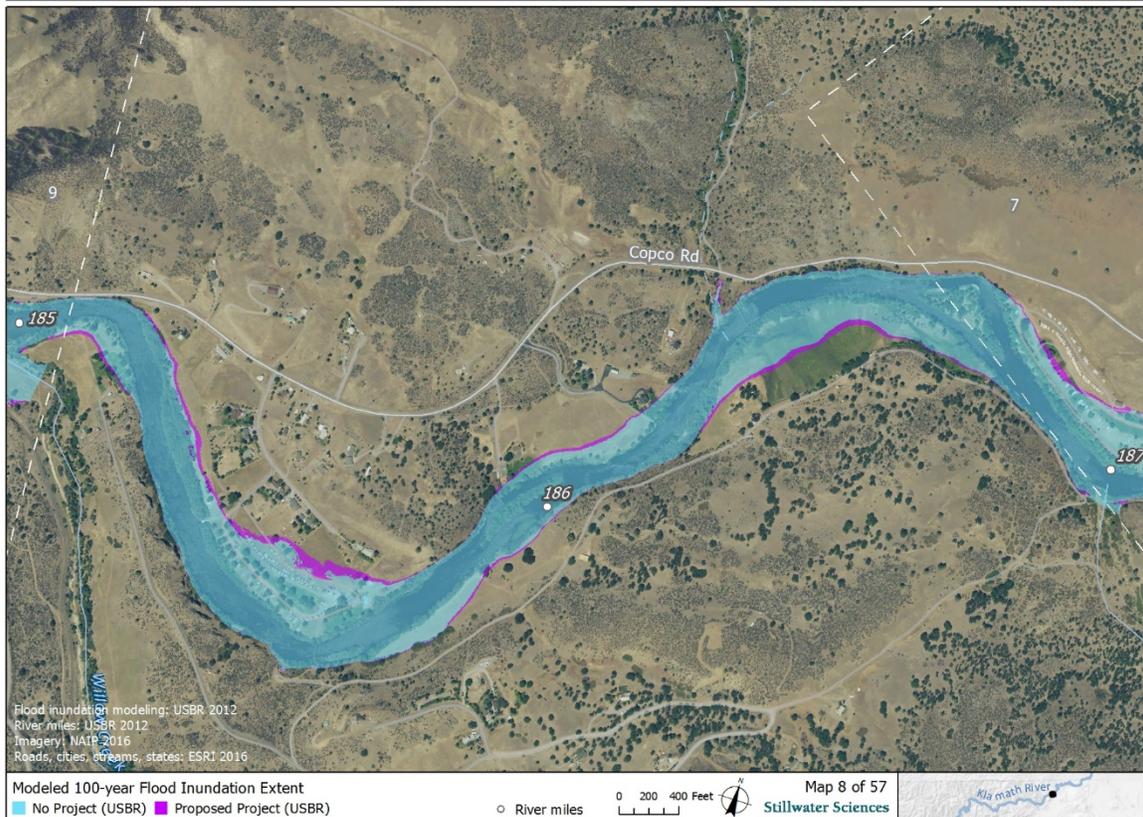

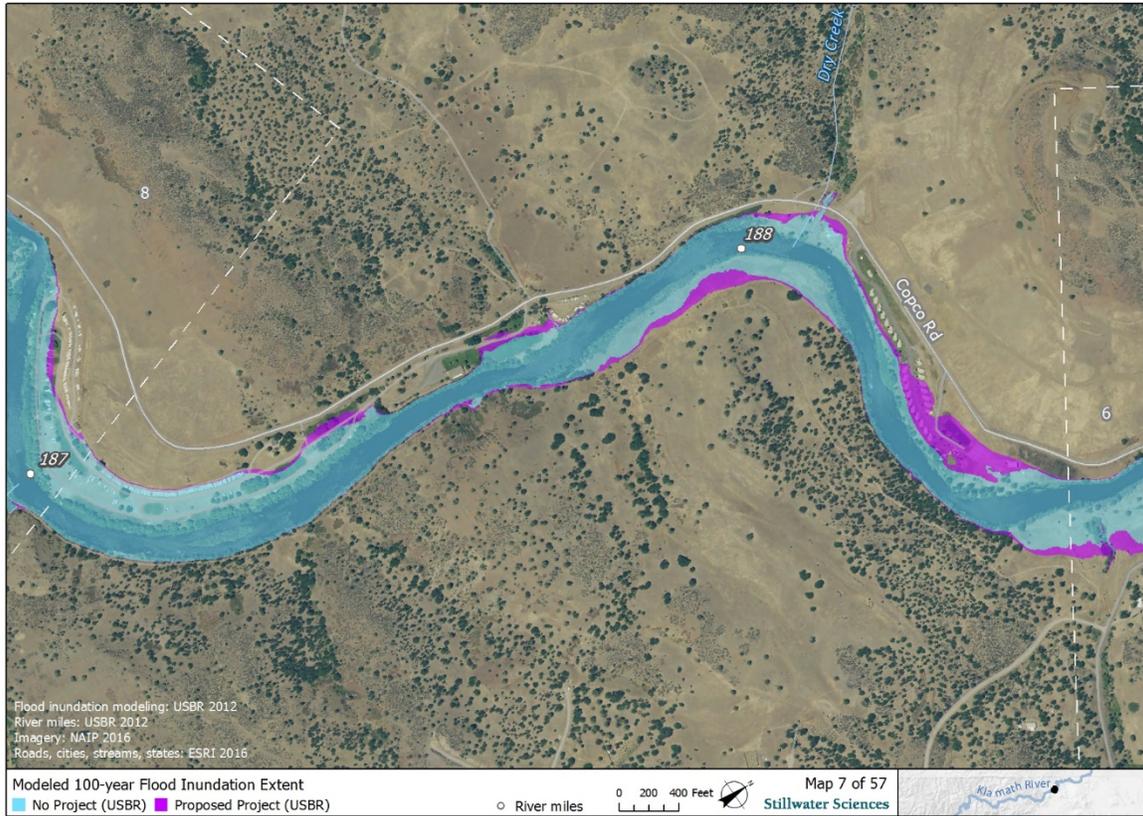

¹¹ USBR. 2012. Hydrology, Hydraulics, and Sediment Transport Studies for the Secretary's Determination on Klamath River Dam Removal and Basin Restoration. Technical Report No. SRH-2011-02. Prepared for Mid-Pacific Region, Bureau of Reclamation, Technical Service Center, Denver, Colorado.
