

PB FERC 2105
March 8, 2015

Mr. Peter Barnes, Engineering Geologist
State Water Board Resources, Div. Water Rights
Water Quality Certification Program

Dear Mr. Barnes,

Regarding the P.G.E Certification of UNFR
Project No 2105

It seems to me that the Alternatives 1 & 2
will be bad for my Lake Almanor and
my retirement pleasures there.

Last year, 2014, the lake was full of
green algae because it was warmer
than usual.

Please DO NOT make it any warmer!

Our trout and salmon need cold water.

The Feather River is beyond saving
as a cold stream due to powerhouses,
dams and generating profits.

Climate change is bad enough for
our Lake Almanor -

Sincerely,
Donald C Brown
